TABLE OF CONTENTS

1. ONE-DIMENSIONAL COUNTING PROCESSES 1

1.1. Probabilities on $(0,\infty]$ 1

1.2. The definition of one-dimensional counting processes 5

1.3. Construction of canonical counting processes 16

1.4. Intensities for canonical counting processes 26

1.5. Martingale decompositions for canonical counting processes 38

1.6. Statistical models and likelihood ratios 44

Notes 47

Exercises 48

2. MULTIVARIATE COUNTING PROCESSES 53

2.1. Definition and construction of multivariate counting processes 53

2.2. Intensities and martingale representations 63

2.3. Products of canonical counting processes 72

2.4. Likelihood ratios 74

2.5. Discrete counting processes 76

Exercises 87

3. STOCHASTIC INTEGRALS 88

3.1. Processes and martingales on W^E 88

3.2. Definition and basic properties of stochastic integrals 99

Notes 109

Exercises 110

4. THE MULTIPLICATIVE INTENSITY MODEL 115

4.1. Definition of the full Aalen model 115

4.2. Product models and sufficient reductions 122

4.3. Estimation in the Aalen Model 128

4.4. Estimation in Markov chains 135

4.5. The Cox regression model 143

4.6. Maximum-likelihood estimation in Aalen models 148

Notes 157

Exercises 159

5. ASYMPTOTIC THEORY 161

5.1. A limit theorem for martingales 161

5.2. Asymptotic distributions of Aalen estimators 166

5.3. Asymptotic distributions of product-limit estimators 181

5.4. Comparison of two intensities 191

Notes 195

Exercises 198

APPENDIX 208

1. The principle of repeated conditioning 208

2. Weak convergence 212
