

CONTENTS

PART I: THEORY OF SINGULAR PERTURBATIONS	1
H.J.K. Moet: <i>Asymptotic analysis of the free boundary in singularly perturbed elliptic variational inequalities.</i>	2
C.M. Brauner and B. Nicolaenko: <i>Regularization and bounded penalization in free boundary problems.</i>	19
W.M. Greenly: <i>Singular perturbation of nonselfadjoint elliptic eigenvalue problems.</i>	43
L.S. Frank and W. Wendt: <i>Coercive singular perturbations: reduction and convergence.</i>	54
B. Kawohl: <i>A singular perturbation approach to nonlinear elliptic boundary value problems.</i>	65
J. Mika: <i>Singular-singularly perturbed linear equations in Banach spaces.</i>	72
R.E. Meyer: <i>Wave reflection and quasiresonance.</i>	84
R. Lutz and T. Sari: <i>Applications of nonstandard analysis to boundary value problems in singular perturbation theory.</i>	113
A. Troesch: <i>Etude macroscopique de l'équation de Van der Pol.</i>	136
S. Kamin: <i>On elliptic singular perturbation problems with several turning points.</i>	145
J. Lorenz: <i>Non linear boundary value problems with turning points and properties of difference schemes.</i>	150
J.E. Flaherty and R.E. O'Malley, Jr.: <i>Singularly perturbed boundary value problems for nonlinear systems including a challenging problem for a nonlinear beam.</i>	170
P.W. Hemker: <i>An accurate method without directional bias for the numerical solution of a 2-D elliptic singular perturbation problem.</i>	192
H.J. Reinhardt: <i>Analysis of adaptive FEM's for $-\epsilon u'' + ku' = f$ based on a-posteriori error estimates.</i>	207

PART II: APPLICATIONS	228
G.C. Hsiao and R.C. MacCamy: <i>Singular perturbations for the two-dimensional viscous flow problem.</i>	229
F.A. Howes: <i>The asymptotic solution of singularly perturbed Dirichlet problems with application to the study of incompressible flows at high Reynolds number.</i>	245
S.V. Parter: <i>On the swirling flow between rotating coaxial disks: a survey.</i>	258
A.J. Hermans: <i>The wave pattern of a ship sailing at low speed.</i>	281
A. van Harten: <i>Applications of singular perturbation techniques to combustion theory.</i>	295
D. Hilhorst: <i>A perturbed free boundary problem arising in the physics of ionized gases.</i>	309
B. Matkowsky and Z. Schuss: <i>Kramers' diffusion problem and diffusion across characteristic boundaries.</i>	318
L.S. Frank and W.D. Wendt: <i>On a singular perturbation in the kinetic theory of enzymes.</i>	346
