Green's Functions in Quantum Physics

Second Corrected and Updated Edition

With 52 Figures

Springer-Verlag
Berlin Heidelberg New York London
Paris Tokyo Hong Kong Barcelona

Contents

Part I: Green's Functions in Mathematical Physics

1. Time-Independent Green's Functions	3
1.1 Formalism	3
1.2 Examples	10
1.2.1 Three-Dimensional Case	10
1.2.2 Two-Dimensional Case	12
1.2.3 One-Dimensional Case	14
1.2.4 Finite Domain Ω	14
1.3 Summary	15
2. Time-Dependent Green's Functions	19
2.1 First-Order Case	19
2.2 Examples	23
2.3 Second-Order Case	24
2.4 Examples	29
2.5 Summary	33

Part II: Green's Functions in One-Body Quantum Problems

3. Physical Significance of G . Application to the Free-Particle Case	39
3.1 General Relations	39
3.2 The Free-Particle ($H_0 = p^2/2m$) Case	42
3.3 The Free-Particle Klein-Gordon Case	46
3.4 Summary	48
4. Green's Functions and Perturbation Theory	50
4.1 Formalism	50
4.1.1 Time-Independent Case	50

4.1.2	Time-Dependent Case	56
4.2	Application: Scattering Theory ($E > 0$)	60
4.3	Application: Bound State in Shallow Potential Wells ($E < 0$)	64
4.4	Summary	67
5.	Green's Functions for Tight-Binding Hamiltonians	71
5.1	Introductory Remarks	71
5.2	The Tight-Binding Hamiltonian (TBH)	74
5.3	Green's Functions	78
5.3.1	One-Dimensional Lattice	79
5.3.2	Square Lattice	81
5.3.3	Simple Cubic Lattice	86
5.3.4	Green's Functions for Bethe Lattices (Cayley Trees)	89
5.4	Brief Review of Applications in Solid-State Physics	92
5.5	Summary	93
6.	Single Impurity Scattering	97
6.1	Formalism	97
6.2	Explicit Results	105
6.2.1	Three-Dimensional Case	105
6.2.2	Two-Dimensional Case	108
6.2.3	One-Dimensional Case	111
6.3	Applications	113
6.3.1	Levels in the Gap	113
6.3.2	The Cooper Pair and Superconductivity	114
6.3.3	The Kondo Problem	120
6.3.4	Lattice Vibrations in Crystals Containing "Isotope" Impurities	122
6.4	Summary	125
7.	Two or More Impurities; Disordered Systems	128
7.1	Two Impurities	128
7.2	Infinite Number of Impurities	138
7.2.1	Virtual Crystal Approximation (VCA)	139
7.2.2	Average t-Matrix Approximation (ATA)	140
7.2.3	Coherent Potential Approximation (CPA)	141
7.2.4	Direct Extensions of the CPA	144
7.2.5	Cluster Generalizations of the CPA	146
7.3	Electrical Conductivity	150
7.3.1	Definition and Some Basic Results	150

7.3.2	A General Formula for Conductivity	152
7.3.3	The Conductivity in Terms of Green's Functions	155
7.3.4	CPA for the Vertex Corrections	158
7.3.5	Vertex Corrections Beyond the CPA	162
7.4	Disorder and Localization	164
7.4.1	One-Dimensional Case	168
7.4.2	Scaling Approach	175
7.4.3	Numerical Methods	179
7.4.4	Mapping the Problem to Other Problems	180
7.4.5	Green's Functions Approach I: RPE	181
7.4.6	Green's Functions Approach II: Vertex Corrections	186
7.5	Summary	192

Part III: Green's Functions in Many-Body Systems

8.	Definitions	199
8.1	Single Particle Green's Functions in Terms of Field Operators	199
8.2	Green's Functions for Interacting Particles	204
8.3	Green's Functions for Noninteracting Particles	208
8.4	Summary	212
9.	Properties and Use of the Green's Functions	215
9.1	Analytical Properties of the g 's and $\tilde{g}$'s	215
9.2	Physical Significance and Use of the g 's and $\tilde{g}$'s	221
9.3	Quasi-Particles	229
9.4	Summary	236
10.	Calculational Methods for g	239
10.1	Equation of Motion Method	239
10.2	Diagrammatic Method for Fermions at $T=0$	244
10.3	Diagrammatic Method for $T \neq 0$	254
10.4	Partial Summations. Dyson's Equation	257
10.5	Summary	263
11.	Applications	265
11.1	Normal Fermi Systems. Landau Theory	265
11.2	High-Density Electron Gas	269
11.3	Dilute Fermi Gas	277
11.4	Summary	280

Appendix A: Analytic Behavior of $G(z)$ Near a Band Edge	282
Appendix B: The Renormalized Perturbation Expansion (RPE)	285
Appendix C: Second Quantization	291
References	301
Subject Index	311
