Invited Talks

Connecting SAT Algorithms and Complexity Lower Bounds	1
<i>Ryan Williams</i>	
Concolic Testing and Constraint Satisfaction	3
<i>Koushik Sen</i>	

Technical Program

Session 1: Complexity Analysis

Parameterized Complexity of DPLL Search Procedures*	5
<i>Olaf Beyersdorff, Nicola Galesi, and Massimo Lauria</i>	
Satisfiability Certificates Verifiable in Subexponential Time*	19
<i>Evgeny Dantsin and Edward A. Hirsch</i>	
On Variables with Few Occurrences in Conjunctive Normal Forms	33
<i>Oliver Kullmann and Xishun Zhao</i>	
Satisfiability of Acyclic and almost Acyclic CNF Formulas (II)	47
<i>Sebastian Ordyniak, Daniel Paulusma, and Stefan Szeider</i>	

Session 2: Binary Decision Diagrams

BDDs for Pseudo-Boolean Constraints – Revisited	61
<i>Ignasi Abío, Robert Nieuwenhuis, Albert Oliveras, and Enric Rodríguez-Carbonell</i>	
DPLL+ROBDD Derivation Applied to Inversion of Some Cryptographic Functions	76
<i>Alexey Ignatiev and Alexander Semenov</i>	
π DD: A New Decision Diagram for Efficient Problem Solving in Permutation Space	90
<i>Shin-ichi Minato</i>	

Session 3: Theoretical Analysis

How to Apply SAT-Solving for the Equivalence Test of Monotone Normal Forms	105
<i>Martin Mundhenk and Robert Zeranski</i>	
Enumerating All Solutions of a Boolean CSP by Non-decreasing Weight	120
<i>Nadia Creignou, Frédéric Olive, and Johannes Schmidt</i>	
A Satisfiability-Based Approach for Embedding Generalized Tanglegrams on Level Graphs	134
<i>Ewald Speckenmeyer, Andreas Wotzlaw, and Stefan Porschen</i>	

Session 4: Extraction of Minimal Unsatisfiable Subsets

Minimally Unsatisfiable Boolean Circuits	145
<i>Anton Belov and Joao Marques-Silva</i>	
On Improving MUS Extraction Algorithms	159
<i>Joao Marques-Silva and Ines Lynce</i>	
Faster Extraction of High-Level Minimal Unsatisfiable Cores	174
<i>Vadim Ryvchin and Ofer Strichman</i>	

Session 5: SAT Algorithms

On Freezing and Reactivating Learnt Clauses*	188
<i>Gilles Audemard, Jean-Marie Lagniez, Bertrand Mazure, and Lakhdar Saïs</i>	
Efficient CNF Simplification Based on Binary Implication Graphs	201
<i>Marijn J.H. Heule, Matti Järvisalo, and Armin Biere</i>	
Between Restarts and Backjumps	216
<i>Antonio Ramos, Peter van der Tak, and Marijn J.H. Heule</i>	

Session 6: Quantified Boolean Formulae

Abstraction-Based Algorithm for 2QBF	230
<i>Mikoláš Janota and Joao Marques-Silva</i>	
Transformations into Normal Forms for Quantified Circuits	245
<i>Hans Kleine Büning, Xishun Zhao, and Uwe Bubeck</i>	

Failed Literal Detection for QBF	259
<i>Florian Lonsing and Armin Biere</i>	

Session 7: Model Enumeration, Local Search

Reducing Chaos in SAT-like Search: Finding Solutions Close to a Given One	273
<i>Ignasi Abío, Morgan Deters, Robert Nieuwenhuis, and Peter J. Stuckey</i>	
Generating Diverse Solutions in SAT	287
<i>Alexander Nadel</i>	
Captain Jack: New Variable Selection Heuristics in Local Search for SAT	302
<i>Dave A.D. Tompkins, Adrian Balint, and Holger H. Hoos</i>	

Session 8: Empirical Evaluation

Careful Ranking of Multiple Solvers with Timeouts and Ties	317
<i>Allen Van Gelder</i>	
Generalized Conflict-Clause Strengthening for Satisfiability Solvers	329
<i>Allen Van Gelder</i>	
Empirical Study of the Anatomy of Modern SAT Solvers	343
<i>Hadi Katebi, Karem A. Sakallah, and João P. Marques-Silva</i>	

Extended Abstracts

Translating Pseudo-Boolean Constraints into CNF	357
<i>Amir Aavani</i>	
Analyzing the Instances of the MaxSAT Evaluation	360
<i>Josep Argelich, Chu Min Li, Felip Manyà, and Jordi Planes</i>	
Model Counting Using the Inclusion-Exclusion Principle	362
<i>Huxley Bennett and Sriram Sankaranarayanan</i>	
Phase Transitions in Knowledge Compilation: An Experimental Study	364
<i>Jian Gao, Minghao Yin, and Ke Xu</i>	
EagleUP: Solving Random 3-SAT Using SLS with Unit Propagation	367
<i>Oliver Gableske and Marijn J.H. Heule</i>	
Non-Model-Based Algorithm Portfolios for SAT	369
<i>Yuri Malitsky, Ashish Sabharwal, Horst Samulowitz, and Meinolf Sellmann</i>	

The Order Encoding: From Tractable CSP to Tractable SAT	371
<i>Justyna Petke and Peter Jeavons</i>	
Applying UCT to Boolean Satisfiability	373
<i>Alessandro Previti, Raghuram Ramanujan, Marco Schaerf, and Bart Selman</i>	
A Compact and Efficient SAT-Encoding of Finite Domain CSP	375
<i>Tomoya Tanjo, Naoyuki Tamura, and Mutsunori Banbara</i>	
Learning Polarity from Structure in SAT	377
<i>Bryan Silverthorn and Risto Mikkulainen</i>	
Author Index	379
