

Table of contents

1. Introduction	1
1.1. A short history of variational principles	1
1.2. The concept of geodesics	2
1.3. Definition of harmonic maps	3
1.4. Mathematical problems arising from the concept of harmonic maps	9
1.5. Physical significance	10
1.6. Some remarks about notation and terminology	10
2. Geometric considerations	12
2.1. Convexity, existence of geodesics arcs and conjugate points	12
2.2. Convexity of the squared distance function.	13
2.3. Uniqueness of geodesic arcs in convex discs	14
2.4. Remark: The higher dimensional analogue of 2.3.	15
2.5. Curvature of parallel curves.	15
2.6. Local coordinates with curvature controlled Christoffel symbols	16
3. Conformal mappings	18
3.1. Statement of Thm. 3.1 concerning conformal representations of compact surfaces homeomorphic to plane domains	18
3.2. The Courant - Lebesgue Lemma	19
3.3. - 3.6. Proof of Theorem 3.1	21
3.7. Uniqueness of conformal representations	33
3.8. Applications of Theorem 3.1	34
3.9. The Hartman - Wintner Lemma	35
4. Existence theorems for harmonic maps between surfaces	38
4.1. A maximum principle for energy minimizing maps	38
4.2. The Dirichlet problem, if the image is contained in a convex disc	40
4.3. Remarks about the higher - dimensional situation	42
4.4. The Theorem of Lemaire and Sacks-Uhlenbeck	43
4.5. The Dirichlet problem, if the image is homeomorphic to S^2 Two different solutions, if the boundary values are nonconstant	46
4.6. Nonexistence for constant boundary values	50
4.7. Existence results in arbitrary dimensions	52

5. Uniqueness theorems	54
5.1. Composition of harmonic maps with convex functions	54
5.2. The uniqueness theorem of Jäger and Kaul	54
5.3. Uniqueness for the Dirichlet problem if the image has non- positive curvature	62
5.4. Uniqueness results for closed solutions, if the image has nonpositive curvature	63
5.5. Uniqueness and nonuniqueness for harmonic maps between closed surfaces	65
6. A-priori $C^{1,\alpha}$ -estimates	65
6.1. Composition of harmonic maps with conformal maps	65
6.2. A maximum principle	66
6.3. Interior modulus of continuity	68
6.4. Interior estimates for the energy	68
6.5. Boundary continuity	69
6.6. Interior C^1 -estimates	72
6.7. Interior $C^{1,\alpha}$ -estimates	75
6.8. C^1 - and $C^{1,\alpha}$ -estimates at the boundary	75
7. A-priori estimates from below for the functional determinant of harmonic diffeomorphisms	77
7.1. A Harnack inequality of E. Heinz	77
7.2. Interior estimates	78
7.3. Boundary estimates	82
7.4. Discussion of the situation in higher dimensions	84
8. The existence of harmonic diffeomorphisms which solve a Dirichlet problem	86
8.1. Proof of the existence theorem in case the image is con- tained in a convex ball and bounded by a convex curve . .	86
8.2. Approximation arguments	88
8.3. Remarks: Plane domains, necessity of the hypotheses of Theorem 8.1	90
9. $C^{1,\alpha}$ -a-priori estimates for arbitrary domains. Non-variational existence proofs	90
9.1. $C^{1,\alpha}$ -estimates on arbitrary surfaces	90
9.2. Estimates for the functional determinant on arbitrary surfaces	92
9.3. A non-variational proof of Theorem 4.1	93

9.4.	A non - variational proof of Theorem 8.1	95
10.	Harmonic coordinates. $C^{2,\alpha}$ - a - priori estimates for harmonic maps	98
10.1.	Existence of harmonic coordinates. $C^{1,\alpha}$ - estimates . . .	98
10.2.	$C^{2,\alpha}$ - estimates for harmonic coordinates	100
10.3.	Bounds on the Christoffel symbols. Conformal coordinates	103
10.4.	Higher regularity of harmonic coordinates	104
10.5.	$C^{2,\alpha}$ - estimates for harmonic maps	104
10.6.	Higher regularity of harmonic maps	105
11.	The existence of harmonic diffeomorphisms between surfaces	106
11.1.	Harmonic diffeomorphisms between closed surfaces (Theorem 11.1)	106
11.2.	Proof of Theorem 11.1	106
11.3.	Extension of Theorem 8.1	111
11.4.	Remarks about the situation in higher dimensions	111
12.	Applications of harmonic maps between surfaces	112
12.1.	Holomorphicity of certain harmonic maps and an analytic proof of Kneser's Theorem	112
12.2.	Proof of Theorem 12.1	113
12.3.	Contractibility of Teichmüller space and the diffeomor- phism group	116
12.4.	Tromba's proof that Teichmüller space is a cell	119
12.5.	The approach of Gerstenhaber - Rauch	123
12.6.	Harmonic Gauss maps and Bernstein theorems	124
12.7.	Surfaces of constant Gauss curvature in 3 - space	124
