

Contents

Preface

1. Introduction

1.1	Gaussian elimination	1
1.2	Sparse matrices	4
1.3	Test matrices	6
1.4	An example	11
1.5	Contents of chapters 2 - 5	13

2. Storage Techniques

2.1	Input requirements	14
2.2	Reordering the structure	15
2.3	The elimination process	22
2.4	Storage of fill-ins	25
2.5	Garbage collections	30
2.6	On the storage of matrix L	34
2.7	Classification of problems	35
2.8	A comparison of ordered and linked lists	38

3. Pivotal Strategies

3.1	Why interchange rows and columns?	42
3.2	The Markowitz strategy	44
3.3	The generalized Markowitz strategy (GMS)	45
3.4	The improved generalized Markowitz strategy (IGMS)	48
3.5	Implementation of the pivotal strategy	54
3.6	Other strategies	57

4. Iterative Refinement

4.1	Convergence of iterative refinement	59
4.2	The drop tolerance	62
4.3	Storage comparisons	63
4.4	Computing time	67
4.5	Choice of drop tolerance and stability factor	72
4.6	When and how to use iterative refinement	75
4.7	Least squares problems	78
4.8	Condition number estimation	82
4.9	Robustness and reliability	83
4.10	Concluding remarks on IR and T	86

5. Other Direct Methods

5.1	Linear least squares problems	87
5.2	The general k-stage direct method	89
5.3	Special cases of the general method	93
5.4	Generalized iterative refinement	97
5.5	Orthogonal transformations	102
5.6	Pivotal strategy	107
5.7	A 2-stage method based on orthogonal transformations	110
5.8	Numerical results	111

Appendix

Codes for sparse matrix problems	116
