

Contents

1	The Environment of Plants	1
1.1	The Hydrosphere	1
1.2	The Atmosphere	1
1.3	The Lithosphere and the Soil	2
1.4	The Ecosphere	3
2	Radiation and Temperature: Energy, Information, Stress	5
2.1	Radiation	5
2.1.1	Radiation Within the Atmosphere	5
2.1.2	Uptake of Radiation by Plants	9
2.1.3	Radiation and Plant Life	11
2.2	Temperature	18
2.2.1	The Energy Budget	19
2.2.2	The Effects of Temperature upon the Vital Processes of Plants	27
2.2.3	The Temperature Limits for Plant Life	32
2.3	Periodicity	51
2.3.1	Climatic Rhythms	51
2.3.2	Activity Rhythms	53
2.3.3	Synchronization of the Growth and Climatic Rhythms	60
3	Carbon Utilization and Dry Matter Production	73
3.1	Carbon Metabolism in the Cell	73
3.1.1	Photosynthesis	73
3.1.2	Photorespiration	81
3.1.3	Catabolic Processes	83
3.2	CO ₂ Exchange in Plants	84
3.2.1	The Exchange of Carbon Dioxide and Oxygen as a Diffusion Process	84

3.2.2	Photosynthetic Capacity and Specific Respiratory Activity	94
3.2.3	The Effect of External Factors on CO ₂ Exchange	102
3.2.4	The Gas Exchange Balance	130
3.3	The Carbon Budget of the Plant	134
3.3.1	Dry-Matter Production	134
3.3.2	Utilization of Photosynthates and the Rate of Growth	136
3.3.3	Translocation of Photosynthates	142
3.4	The Carbon Budget of Plant Communities	144
3.4.1	The Productivity of Stands of Plants	144
3.4.2	Carbon Balance in Plant Communities	146
3.4.3	The Net Primary Production of the Earth's Plant Cover	150
3.4.4	Energy Conversion by Vegetation	157
4	The Utilization and Cycling of Mineral Elements	158
4.1	The Soil as a Nutrient Source for Plants	159
4.1.1	The Mineral Nutrients in the Soil	159
4.1.2	The pH of the Soil ("Soil Reaction")	160
4.2	The Role of Mineral Nutrients in Plant Metabolism	162
4.2.1	The Uptake of Mineral Nutrients	162
4.2.2	The Translocation of Minerals in the Plant ...	164
4.2.3	Utilization and Deposition of Minerals in the Plant	170
4.2.4	The Elimination of Minerals	174
4.3	Nitrogen Utilization and Metabolism	175
4.3.1	The Nitrogen Metabolism of Higher Plants ...	175
4.3.2	Nitrogen Fixation by Microorganisms	180
4.4	Habitat-Related Aspects of Mineral Metabolism	182
4.4.1	Calcicolous and Calcifugous Plants	182
4.4.2	Plants of Saline Habitats	184
4.4.3	Plants on Soils Rich in Heavy Metals	191
4.5	The Toxic Effects of Environmental Pollutants	195
4.5.1	Toxic Substances in the Environment	195
4.5.2	Pollution Injury	195
4.5.3	Pollution Resistance and Bioindicators of Pollution Stress	198
4.6	Mineral Balance and Circulation in Plant Communities	202

4.6.1	The Mineral Balance of a Plant Community ..	202
4.6.2	The Circulation of Mineral Nutrients Between Plants and Soil	205
5	Water Relations	206
5.1	Poikilohydric and Homoiohydric Plants	206
5.2	Water Relations of the Plant Cell	208
5.2.1	The Water in the Cell	208
5.2.2	The Water Potential of Plant Cells	209
5.2.3	Water Potential and the Cellular Translocation of Water	210
5.3	Absorption, Transpiration, and Water Balance in the Plant	213
5.3.1	Water Uptake	213
5.3.2	The Translocation of Water	218
5.3.3	Water Loss from Plants	222
5.3.4	The Water Balance of a Plant	234
5.3.5	Water Balance in Different Plant Types	237
5.3.6	Water Balance During Drought	241
5.3.7	Drought Resistance	249
5.4	Water Economy in Plant Communities	258
5.4.1	The Water Balance of Stands of Plants	258
6	Synopsis	268
6.1	Analysis of Ecological Factors	268
6.2	Special Features of Ecological Methodology ...	270
6.3	Data Synthesis, Ecological Models, and Computer Simulation	272
	Literature	273
	Subject Index	297
