

CONTENTS

1. Linear Storage

1.1.	Introduction	1
1.2.	Record arrangement to minimize head travel	2
1.3.	Record partition and page arrangement to minimize head travel	8
1.4.	Dynamic allocation of records to minimize head travel	16
1.5.	Record arrangement to minimize head travel (unequal record size)	33
1.6.	Schedules to minimize head travel in a batched processing environment	59
1.7.	Appendix	94
1.8.	References	112

2. Two-Dimensional Storage

2.1.	Introduction and basic model	116
2.2.	Record arrangement to minimize head travel	120
2.3.	Record arrangement to minimize head travel in bounded arrays	143
2.4.	Head scheduling in a batched processing environment	160
2.5.	Permutation of records using minimum head movement	177
2.6.	Appendix	218
2.7.	References	221

3. Magnetic Bubble Memory

3.1.	Introduction and basic models	225
3.2.	Optimal permutation algorithm in a simple model of bubble memory	234
3.3.	Up-down bubble sorter	251
3.4.	Tree searching in a major/minor loop bubble memory	269
3.5.	Permutation algorithms in different models of bubble memories	296
3.6.	Sorting algorithms in different models of bubble memories	324
3.7.	Searching algorithms in different models of bubble memories	355
3.8.	Appendix	394
3.9.	References	400
	Index	407
