Introduction xv

1	Polymeric Electrode Materials in Modern Metal-ion Batteries	1
	<i>Zhenzhen Wu, Pan Yang, Shanqing Zhang, and Sheng Li</i>	
1.1	Introduction	1
1.2	Classification of PEMs	5
1.2.1	Carbonyls	9
1.2.2	Organosulfur	11
1.2.3	Organic Nitrogen (N)	11
1.2.4	Conducting Polymers	13
1.2.5	Organic Radicals	15
1.2.6	Superlithiated Compounds	16
1.3	Molecular Engineering of PEMs	17
1.3.1	Specific Energy Density	17
1.3.2	Power Density	19
1.3.3	Cycle Performance	21
1.4	Morphological Engineering of PEMs	22
1.4.1	0D PEMs	23
1.4.2	1D PEMs	24
1.4.3	2D PEMs	25
1.4.4	3D PEMs	26
1.5	Applications of PEMs	28
1.5.1	LIBs	28
1.5.2	SIBs	31
1.5.3	PIBs	34
1.5.4	Multivalent MIBs	36
1.5.4.1	Conducting Polymers	36
1.5.4.2	Carbonyl Compounds	38
1.5.4.3	Imine Compounds	39

1.6	Conclusion and Perspectives	41
1.6.1	Conclusion	41
1.6.2	Perspectives	42
	References	43
2	Polymeric Binders in Modern Metal-ion Batteries	61
	<i>Hao Chen, Shanqing Zhang, Gao Liu, and Cheng Yan</i>	
2.1	Introduction	61
2.2	General Binding Mechanisms	62
2.3	Classification of Binders	63
2.4	Strategies of Binder Design	64
2.4.1	Strategies to Enhance Mechanical Interlocking	66
2.4.2	Strategies to Enhance Interfacial Bonding	69
2.4.3	Binders with Multiple Functionalities	71
2.5	Application of Binders for Different Energy Materials	76
2.5.1	High-Voltage Cathodes	76
2.5.2	Li-S Batteries	81
2.5.3	Silicon Anode	88
2.5.4	Sodium-Ion Batteries	95
2.5.5	Sodium-Sulfur and Potassium-Sulfur Batteries	98
2.6	Conclusion and Perspective	101
	References	102
3	Polymeric Separator in Modern Metal-ion Batteries	119
	<i>Mengting Zheng, Jun Lu, and Tiefeng Liu</i>	
3.1	Introduction	119
3.2	Functions of Polymeric Separators in Metal-ion Batteries	120
3.2.1	Essential Properties of Polymeric Separators	121
3.2.1.1	Porosity	121
3.2.1.2	Wettability	122
3.2.1.3	Strength	122
3.2.1.4	Thickness	123
3.2.2	Desirable Functions of Polymeric Separators	123
3.3	Classification of Polymeric Separators	124
3.3.1	Nonwoven Separators	124
3.3.2	Nanoporous Membrane Separators	124
3.3.3	Microporous Membrane Separators	124
3.3.4	Composite Membrane Separators	125
3.4	Functional Polymeric Separators for Modern Metal-ion Batteries	126
3.4.1	Thermal-resistant Separators	126
3.4.2	Reversible Thermally Induced Shutdown Separators	128
3.4.3	Separators for Metal Dendrite Growth Inhibition	129
3.4.4	Separators for Stopping the Shuttle Effect	131
3.4.5	Stretchable Separators for Flexible Batteries	133
3.4.6	The Separator as Li Source for Recycling Degraded Cathode	134

3.4.7	Super Wettable Separator to Boost Ionic Diffusion	135
3.5	Manufacturing Techniques of Polymeric Separators	136
3.5.1	Conventional Manufacturing Techniques of Polymeric Separators	136
3.5.2	Modern Manufacturing Techniques of Functional Polymeric Separators	138
3.6	Conclusion and Perspectives	139
	References	140
4	Polymeric Electrolytes in Modern Metal-ion Batteries	147
	<i>Shuxing WU, Boyang Zhang, Huixian Xie, and Zhan Lin</i>	
4.1	Introduction	147
4.2	Ion Transport in Polymeric Electrolytes	147
4.2.1	Solid Polymeric Electrolytes	148
4.2.2	Gel Polymeric Electrolytes	149
4.2.3	Composite Polymeric Electrolytes	149
4.3	Property Study	150
4.3.1	Thermal Analysis	150
4.3.2	Structural Analysis	151
4.3.3	Diffraction Technique	151
4.3.4	Conductivity Measurement	152
4.3.5	Nuclear Magnetic Resonance (NMR)	153
4.3.6	Modeling and Theory	153
4.4	Classifications of Polymeric Electrolytes	154
4.4.1	Solid Polymer Electrolytes	154
4.4.1.1	Dispersed Solid Polymer Electrolytes	154
4.4.1.2	Intercalated/Exfoliated Solid Polymer Electrolytes	155
4.4.1.3	Liquid Crystal Containing Polymer Electrolytes	155
4.4.2	Gel Polymer Electrolytes	155
4.4.2.1	Ionic-Liquid-based Polymer Electrolytes	155
4.4.2.2	Gel Polymer Electrolytes	155
4.5	Strategies in Designing Solid-state Electrolytes	156
4.5.1	Pure Polymeric Electrolytes	156
4.5.1.1	Classification of Pure Solid Polymer Electrolytes	156
4.5.1.2	Composition of Pure Solid Polymer Electrolytes	156
4.5.1.3	Polymer Hosts	157
4.5.1.4	Conductive Salt	158
4.5.1.5	Research Strategy	159
4.5.2	Gel Polymeric Electrolyte	160
4.5.2.1	Component	160
4.5.2.2	Polymer Matrix	160
4.5.2.3	Plasticizer	163
4.5.2.4	Conductive Lithium Salt	164
4.5.3	Polymeric–Ceramic Composite Electrolyte	164
4.5.3.1	Components of Polymer–Ceramic Composite Electrolytes	165
4.5.3.2	Classification of Polymer–Ceramic Composite Electrolytes	165

- 4.5.3.3 Research Strategy 167
- 4.6 Application of Polymer Electrolytes in All-solid-state Batteries 167
 - 4.6.1 Lithium Battery System 167
 - 4.6.2 Sodium Battery System 170
 - 4.6.3 Li-S Battery System 171
- 4.7 Summary and Prospect 174
- References 175
