Introduction	1
§1. What is point-set topology about?	1
§2. Origin and beginnings	2
 CHAPTER I	
Fundamental Concepts	5
§1. The concept of a topological space	5
§2. Metric spaces	7
§3. Subspaces, disjoint unions and products	9
§4. Bases and subbases	12
§5. Continuous maps	12
§6. Connectedness	14
§7. The Hausdorff separation axiom	17
§8. Compactness	18
 CHAPTER II	
Topological Vector Spaces	24
§1. The notion of a topological vector space	24
§2. Finite-dimensional vector spaces	25

§3. Hilbert spaces	26
§4. Banach spaces	26
§5. Fréchet spaces	27
§6. Locally convex topological vector spaces	28
§7. A couple of examples	29
 CHAPTER III	
The Quotient Topology	31
§1. The notion of a quotient space	31
§2. Quotients and maps	32
§3. Properties of quotient spaces	33
§4. Examples: Homogeneous spaces	34
§5. Examples: Orbit spaces	37
§6. Examples: Collapsing a subspace to a point	39
§7. Examples: Gluing topological spaces together	43
 CHAPTER IV	
Completion of Metric Spaces	50
§1. The completion of a metric space	50
§2. Completion of a map	54
§3. Completion of normed spaces	55
 CHAPTER V	
Homotopy	59
§1. Homotopic maps	59
§2. Homotopy equivalence	61
§3. Examples	63
§4. Categories	66
§5. Functors	69
§6. What is algebraic topology?	70
§7. Homotopy—what for?	74
 CHAPTER VI	
The Two Countability Axioms	78
§1. First and second countability axioms	78
§2. Infinite products	80
§3. The role of the countability axioms	81
 CHAPTER VII	
CW-Complexes	87
§1. Simplicial complexes	87
§2. Cell decompositions	93
§3. The notion of a CW-complex	95
§4. Subcomplexes	98
§5. Cell attaching	99
§6. Why CW-complexes are more flexible	100
§7. Yes, but . . . ?	102

CHAPTER VIII	
Construction of Continuous Functions on Topological Spaces	106
§1. The Urysohn lemma	106
§2. The proof of the Urysohn lemma	111
§3. The Tietze extension lemma	114
§4. Partitions of unity and vector bundle sections	116
§5. Paracompactness	123
CHAPTER IX	
Covering Spaces	127
§1. Topological spaces over X	127
§2. The concept of a covering space	130
§3. Path lifting	133
§4. Introduction to the classification of covering spaces	137
§5. Fundamental group and lifting behavior	141
§6. The classification of covering spaces	144
§7. Covering transformations and universal cover	149
§8. The role of covering spaces in mathematics	156
CHAPTER X	
The Theorem of Tychonoff	160
§1. An unlikely theorem?	160
§2. What is it good for?	162
§3. The proof	167
LAST CHAPTER	
Set Theory (by Theodor Bröcker)	171
References	177
Table of Symbols	179
Index	183
