

Contents

List of Abbreviations . . . . . X

Introduction . . . . . 1

Chapter 1 – Basic Regularities of Phenotypic Adaptation . . . . . 7

    Systemic Structural Trace: The Basis of Adaptation . . . . . 10

    Interrelation Between Function and Genetic Apparatus: The Basis for  
    Forming the Systemic Structural Trace . . . . . 17

    Interrelationship of Cell Structures: A Parameter Determining the  
    Functional Possibilities of the System Responsible for Adaptation . . . . . 26

    Reversibility of Adaptation: Physiologic and Pathologic Deadaptation . . . . . 52

Chapter 2 – Role of Stress Reaction in Urgent and Long-term Adaptation . . . . . 59

    Stress Mobilization and Redistribution of Resources . . . . . 59

    Stress-enhanced Resistance to Hypoxia . . . . . 61

    Lipotropic Effect of Stress in Biomembranes . . . . . 66

    Antioxidant Effect of Glucocorticoids and the Influence of Synthetic  
    Antioxidants on Urgent Adaptation to Physical Loads . . . . . 72

    Post-stress Activation of Nucleic Acid and Protein Synthesis and Its Role  
    in Forming Long-term Adaptation . . . . . 75

    General Mechanism and Principal Stages of Phenotypic Adaptation . . . . . 86

Chapter 3 – Development of Adaptation to Hypoxia and Its Preventive Use . . . . . 94

    Systemic Structural Trace and Principal Stages of Adaptation to Hypoxia . . . . . 96

Chapter 4 – Compensation, a Form of Adaptational Response of an Injured  
Organism. . . . . 116

<b>Chapter 5 – Systemic Structural Trace: Foundation of Memory and Higher Adaptational Responses</b>	125
Relationship Between Memory and Adaptation	125
Role of Emotional Stress in Forming Higher Adaptational Responses.	
Unity of Dynamics in Forming Conditioned Reflexes and Other Adaptational Responses	132
Main Stages of the Development of Conditioned Reflex. Differences and Common Features of Higher and Simple Adaptational Responses	137
Effect of Adaptation to Hypoxia on the Formation of Temporary Connections, Behavior and Brain Resistance to Harmful Factors	139
<b>Chapter 6 – Stress and Stress Damage</b>	152
Damaging Stress Situation and Pathogenesis of Stress Stomach Ulcers	154
Pathogenesis of Stress and Ischemic Injuries of the Heart	159
Stress: A Basic Etiologic Factor of Noninfectious Human Diseases. Its Role in the Origin of Ischemic Heart Disease and Tumors	190
<b>Chapter 7 – Adaptation to Stress Situations and Systems for Natural Prevention of Stress-induced and Ischemic Injuries</b>	204
Activation of the GABA-ergic Inhibitory System Under Stress as a Natural Mechanism for Preventing Stress-induced and Ischemic Injuries	207
Blockade of Physiologic Effects of Calcium: Its Role in Preventing Ischemic and Stress Damages	222
Role of the Adenine Nucleotide System and Its Product Adenosine in Preventing Energy Shortage and Limiting Adrenergic Effects	228
Activation of the Prostaglandin System: A Factor for Preventing Stress and Ischemic Damages	232
<b>Chapter 8 – Antioxidant Factors in the Organism: A System of Natural Prevention of Stress-induced and Ischemic Injuries</b>	242
Antioxidant Systems and Action Mechanisms of Exogenous Antioxidants	251
Antioxidant Protection of the Heart Against Hypoxia, Ischemia, and Reoxygenation	277
<b>Conclusion</b>	295
<b>References</b>	297
<b>Subject Index</b>	324
