Computational Galerkin Methods

With 107 Figures

Springer-Verlag
New York Berlin Heidelberg Tokyo

Contents

1. Traditional Galerkin Methods	1
1.1 Introduction	1
1.2 Simple Examples	4
1.2.1 An ordinary differential equation	4
1.2.2 An eigenvalue problem	9
1.2.3 Viscous flow in a channel	13
1.2.4 Unsteady heat conduction	15
1.2.5 Burgers' equation	18
1.3 Method of Weighted Residuals	24
1.3.1 Subdomain method	26
1.3.2 Collocation method	27
1.3.3 Least-squares method	28
1.3.4 Method of moments	29
1.3.5 Galerkin method	30
1.3.6 Generalized Galerkin method	31
1.3.7 Comparison of weighted-residual methods	32
1.4 Connection with Other Methods	39
1.5 Theoretical Properties	44
1.6 Applications	50
1.6.1 Natural convection in a rectangular slot	50
1.6.2 Hydrodynamic stability	55
1.6.3 Acoustic transmission in ducts	58
1.6.4 Flow around inclined airfoils	61
1.6.5 Microstrip disc problem	64
1.6.6 Other applications of traditional Galerkin methods	67
1.7 Closure	68
References	68
2. Computational Galerkin Methods	72
2.1 Limitations of the Traditional Galerkin Method	72
2.2 Solution for Nodal Unknowns	76
2.3 Use of Low-order Test and Trial Functions	77
2.4 Use of Finite Elements to Handle Complex Geometry	79
2.5 Use of Orthogonal Test and Trial Functions	82
2.6 Evaluation of Nonlinear Terms in Physical Space	83
2.7 Advantages of Computational Galerkin Methods	83
2.8 Closure	84
References	85

3. Galerkin Finite-Element Methods	86
3.1 Trial Functions and Finite Elements	87
3.1.1 One-dimensional elements	87
3.1.2 Rectangular elements in two and three dimensions	91
3.1.3 Triangular elements	97
3.2 Examples	99
3.2.1 A simplified Sturm-Liouville equation	100
3.2.2 Viscous flow in a channel	104
3.2.3 Inviscid, incompressible flow	108
3.2.4 Unsteady heat conduction	112
3.2.5 Burgers' equation	114
3.3 Connection with Finite-Difference Formulae	119
3.4 Theoretical Properties	124
3.4.1 Convergence	125
3.4.2 Error estimates	128
3.4.3 Optimal error estimates and superconvergence	130
3.4.4 Numerical convergence results	133
3.5 Applications	135
3.5.1 Convective heat transfer	135
3.5.2 Viscous incompressible flow	139
3.5.3 Jet-flap flows	141
3.5.4 Acoustic transmission in ducts	143
3.5.5 Tidal flows	145
3.5.6 Weather forecasting	149
3.6 Closure	151
References	152
4. Advanced Galerkin Finite-Element Techniques	155
4.1 Time Splitting	155
4.1.1 Thermal entry problem	158
4.1.2 Viscous compressible flow	160
4.2 Least-squares Residual Fitting	163
4.3 Special Trial Functions	168
4.3.1 Singularities	169
4.3.2 Near-wall turbulent flows	171
4.3.3 Dorodnitsyn boundary-layer formulation	173
4.4 Integral Equations	176
4.4.1 Boundary-element method	179
4.5 Closure	184
References	185
5. Spectral Methods	187
5.1 Choice of Trial Functions	187
5.2 Examples	192
5.2.1 Unsteady heat conduction	192
5.2.2 Burgers' equation	194
5.3 Techniques for Improved Efficiency	199

5.3.1	Recurrence relations	199
5.3.2	Nonlinear terms	201
5.3.3	Time differencing	203
5.4	Alternative Spectral Methods	205
5.4.1	Pseudospectral method	205
5.4.2	The tau method	207
5.5	Orthonormal Method of Integral Relations	209
5.6	Applications	214
5.6.1	Global atmospheric modeling	214
5.6.2	Direct turbulence simulation	218
5.6.3	Other spectral applications	222
5.7	Closure	222
	References	223
6.	Comparison of Finite Difference, Finite Element and Spectral Methods	225
6.1	Problems and Partial Differential Equations	226
6.2	Boundary Conditions and Complex Boundary Geometry	228
6.3	Computational Efficiency	229
6.4	Ease of Coding and Flexibility	230
6.5	Test Cases	231
6.5.1	Burgers' equation	232
6.5.2	Model parabolic equations	235
6.5.3	Passive scalar convection	238
6.5.4	Open ocean modeling	241
6.6	Closure	243
	References	244
7.	Generalized Galerkin Methods	246
7.1	A Motivation	246
7.2	Theoretical Background	251
7.2.1	Petrov-Galerkin formulation	251
7.2.2	Construction of the test function, ψ_k	252
7.3	Steady Convection-Diffusion Problems	259
7.3.1	Higher-order one-dimensional formulations	259
7.3.2	Two-dimensional formulations	260
7.4	Parabolic Problems	267
7.4.1	Transient convection-diffusion equation	267
7.4.2	Burgers' equation	268
7.5	Hyperbolic Problems	270
7.6	Closure	274
	References	275
Appendix 1	Program BURG1	277
Appendix 2	Program BURG4	289
