

Contents

Chapter 1. General Introduction

1.1	Introduction	1
1.2	Boundary Value Problems and Initial Problems	4
1.3	One-Dimensional Unsteady Flow Characteristics	6
1.4	Steady Supersonic Plane or Axi-Symmetric Flow. Equations of Motion in Characteristic Form	9
1.5	Basic Concepts Used in Finite Difference Methods	15
	References	27

Chapter 2. The Godunov Schemes

2.1	The Origins of Godunov's First Scheme	28
2.2	Godunov's First Scheme. One-Dimensional Eulerian Equations	33
2.3	Godunov's First Scheme in Two and More Dimensions	39
2.4	Godunov's Second Scheme	41
2.5	The Double Sweep Method	46
2.6	Execution of the Second Scheme on the Intermediate Layer	48
2.7	Boundary Conditions on the Intermediate Layer	50
2.8	Procedure on the Final Layer	52
2.9	Applications of the Second Godunov Scheme	53
2.10	Glimm's Method	56
2.11	Outline of Solution for Gas Dynamic Equations	56
2.12	The Glimm Scheme for Simple Acoustic Waves	58
2.13	Random Choice for the Gas Dynamic Equations	61
2.14	Solution of the Riemann Problem	63
2.15	Extension to Unsteady Flow with Cylindrical or Spherical Symmetry	63
2.16	Remarks on Multi-Dimensional Problems	65
	References	66

Chapter 3. The BVLR Method

3.1	Description of Method for Supersonic Flow	67
3.2	Extensions to Mixed Subsonic-Supersonic Flow. The Blunt Body Problem	73

3.3	The Double Sweep Method for Unsteady Three-Dimensional Flow	77
3.4	Worked Problem. Application to Circular Arc Airfoil	79
3.5	Results and Discussion	86
	Appendix—Shock Expansion Theory	87
	References	89

Chapter 4. The Method of Characteristics for Three-Dimensional Problems in Gas Dynamics

4.1	Introduction	90
4.2	Bicharacteristics Method (BUTLER)	93
4.3	Optimal Characteristics Methods (BRUHN and HAACK, SCHAEZT)	100
4.4	Near Characteristics Method (SAUER)	105
	References	113

Chapter 5. The Method of Integral Relations

5.1	Introduction	114
5.2	General Formulation. Model Problem	116
5.3	Flow Past Ellipses	120
5.4	The Supersonic Blunt Body Problem	122
5.5	Transonic Flow	126
5.6	Incompressible Laminar Boundary Layer Equations. Basic Formulation	131
5.7	The Method in the Compressible Case	137
5.8	Laminar Boundary Layers with Suction or Injection	146
5.9	Extension to Separated Flows	149
5.10	Application to Supersonic Wakes and Base Flows	156
5.11	Application to Three-Dimensional Laminar Boundary Layers	159
5.12	A Modified Form of the Method of Integral Relations	170
5.13	Application to Viscous Supersonic Conical Flows	174
5.14	Extension to Unsteady Laminar Boundary Layers	178
5.15	Application to Internal Flow Problems	182
	Model Problem (CHU and GONG)	194
	References	196

Chapter 6. Telenin's Method and the Method of Lines

6.1	Introduction	199
6.2	Solution of Laplace's Equation by Telenin's Method	200
6.3	Solution of a Model Mixed Type Equation by Telenin's Method	203
6.4	Application of Telenin's Method to the Symmetrical Blunt Body Problem	209
6.5	Extension to Unsymmetrical Blunt Body Flows	215
6.6	Application of Telenin's Method to the Supersonic Yawed Cone Problem	221

6.7 The Method of Lines. General Description	233
6.8 Applications of the Method of Lines	237
6.9 Powell's Method Applied to Two Point Boundary Value Problems	249
Telenin's Method. Model Problems (KLOPFER)	254
References	268
Subject Index	269
