## Surgical Planning, Simulation, and Guidance

|                                                                                                                                             |    |
|---------------------------------------------------------------------------------------------------------------------------------------------|----|
| The Tumor Therapy Manager – Design, Refinement and Clinical Use of a Software Product for ENT Surgery Planning and Documentation .....      | 1  |
| <i>Ivo Rössling, Jana Dornheim, Lars Dornheim, Andreas Boehm, and Bernhard Preim</i>                                                        |    |
| An Image-Guided Surgery System to Aid Endovascular Treatment of Complex Aortic Aneurysms: Description and Initial Clinical Experience ..... | 13 |
| <i>Graeme Penney, Andreas Varnavas, Neville Dastur, and Tom Carrell</i>                                                                     |    |
| OR Specific Domain Model for Usability Evaluations of Intra-operative Systems .....                                                         | 25 |
| <i>Ali Bigdelou, Tobias Sterner, Stefan Wiesner, Thomas Wendler, Florian Matthes, and Nassir Navab</i>                                      |    |
| A Multi-view Active Contour Method for Bone Cement Reconstruction from C-Arm X-Ray Images .....                                             | 36 |
| <i>Blake C. Lucas, Yoshito Otake, Mehran Armand, and Russell H. Taylor</i>                                                                  |    |
| Biomechanically Constrained Groupwise Statistical Shape Model to Ultrasound Registration of the Lumbar Spine .....                          | 47 |
| <i>Siavash Khallaghi, Parvin Mousavi, Dan Borschneck, Gabor Fichtinger, and Purang Abolmaesumi</i>                                          |    |
| Visual Tracking of Surgical Tools for Proximity Detection in Retinal Surgery .....                                                          | 55 |
| <i>Rogério Richa, Marcin Balicki, Eric Meisner, Raphael Sznitman, Russell Taylor, and Gregory Hager</i>                                     |    |

## Medical Robotics, Instrumentation, and Modelling

|                                                                                                                  |    |
|------------------------------------------------------------------------------------------------------------------|----|
| DOF Minimization for Optimized Shape Control under Active Constraints for a Hyper-redundant Flexible Robot ..... | 67 |
| <i>Valentina Vitiello, Ka-Wai Kwok, Christopher Payne, and Guang-Zhong Yang</i>                                  |    |

|                                                                                                                                                          |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| A Robotic System for Intra-operative Trans-Rectal Ultrasound and<br>Ultrasound Elastography in Radical Prostatectomy .....                               | 79  |
| <i>Troy Adebar, Septimiu Salcudean, Sara Mahdavi, Mehdi Moradi,<br/>Christopher Nguan, and Larry Goldenberg</i>                                          |     |
| Hand-Held Force Magnifier for Surgical Instruments .....                                                                                                 | 90  |
| <i>George Stetten, Bing Wu, Roberta Klatzky, John Galeotti,<br/>Mel Siegel, Randy Lee, Francis Mah, Andrew Eller,<br/>Joel Schuman, and Ralph Hollis</i> |     |
| PS-GANS: A Patient-Specific, Gravity Assisted Navigation System for<br>Acetabular Cup Placement .....                                                    | 101 |
| <i>Guoyan Zheng, Santiago Echeverri, Weiguo Xie, and<br/>Lutz-Peter Nolte</i>                                                                            |     |
| Correlating Clinical Scores with Anatomical Electrodes Locations for<br>Assessing Deep Brain Stimulation .....                                           | 113 |
| <i>Florent Lalys, Claire Haegelen, Alexandre Abadie, and<br/>Pierre Jannin</i>                                                                           |     |
| Intra-operative “Pick-Up” Ultrasound for Robot Assisted Surgery with<br>Vessel Extraction and Registration: A Feasibility Study .....                    | 122 |
| <i>Caitlin Schneider, Julian Guerrero, Christopher Nguan,<br/>Robert Rohling, and Septimiu Salcudean</i>                                                 |     |
| <br><b>Abdominal Navigation and Visualization</b>                                                                                                        |     |
| Constrained 2-D/3-D Registration for Motion Compensation in AFib<br>Ablation Procedures .....                                                            | 133 |
| <i>Alexander Brost, Andreas Wimmer, Rui Liao,<br/>Joachim Hornegger, and Norbert Strobel</i>                                                             |     |
| Image-Based Automatic Ablation Point Tagging System with Motion<br>Correction for Cardiac Ablation Procedures .....                                      | 145 |
| <i>YingLiang Ma, Gang Gao, Geert Gijsbers, C. Aldo Rinaldi,<br/>Jaswinder Gill, Reza Razavi, and Kawal S. Rhode</i>                                      |     |
| Passive Single Marker Tracking for Organ Motion and Deformation<br>Detection in Open Liver Surgery .....                                                 | 156 |
| <i>Thiago Oliveira-Santos, Matthias Peterhans, Simon Hofmann, and<br/>Stefan Weber</i>                                                                   |     |

## Interventional Imaging

|                                                                                                                                                                                                                    |            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| Improved Neuronavigation through Integration of Intraoperative Anatomical and Diffusion Images in an Interventional MRI Suite . . . . .                                                                            | 168        |
| <i>Pankaj Daga, Gavin Winston, Marc Modat, M. Jorge Cardoso, Mark White, Laura Mancini, Andrew W. McEvoy, John Thornton, Caroline Micallef, Tarek Yousry, David Hawkes, John S. Duncan, and Sebastien Ourselin</i> |            |
| Panorama Ultrasound for Guiding Epidural Anesthesia: A Feasibility Study . . . . .                                                                                                                                 | 179        |
| <i>Hedyeh Rafii-Tari, Purang Abolmaesumi, and Robert Rohling</i>                                                                                                                                                   |            |
| <b>Author Index . . . . .</b>                                                                                                                                                                                      | <b>191</b> |
