

Contents

Chapter 1. Basic Concepts	1
§ 1. Bilinear Forms and Quadratic Forms	1
§ 2. Matrix Notation	4
§ 3. Regular Spaces and Orthogonal Decomposition	6
§ 4. Isotropy and Hyperbolic Spaces	11
§ 5. Witt's Theorem	14
§ 6. Appendix: Symmetric Bilinear Forms and Quadratic Forms over Rings	18
Chapter 2. Quadratic Forms over Fields	28
§ 1. Grothendieck and Witt Rings	29
§ 2. Invariants	35
§ 3. Examples I (Finite Fields)	37
§ 4. Examples II (Ordered Fields)	40
§ 5. Ground Field Extension and Transfer	44
§ 6. The Torsion of the Witt Group	51
§ 7. Orderings, Pfister's Local Global Principle, and Prime Ideals of the Witt Ring	54
§ 8. Applications of the Method of Transfer	60
§ 9. Description of the Witt Ring by Generators and Relations	64
§ 10. Multiplicative Forms	69
§ 11. Quaternion Algebras	74
§ 12. The Hasse Invariant and the Witt Invariant	79
§ 13. The Hasse Algebra	85
§ 14. Classification Theorems	88
§ 15. Examples III. C_i -fields	97
§ 16. The u -invariant	102
Chapter 3. Quadratic Forms over Formally Real Fields	106
§ 1. Formally Real and Ordered Fields	106
§ 2. Real Closed Fields	112

§3. Hilbert's 17th Problem and the Real Nullstellensatz . . .	116
§4. Extension of Signatures	122
§5. The Space of Orderings of a Field	124
§6. The Total Signature	128
§7. A Local Global Principle for Weak Isotropy	131
Appendix: Places, Valuations, and Valuation Rings	139

Chapter 4. Generic Methods and Pfister Forms 142

§1. Chain- p -equivalence of Pfister Forms	142
§2. Pfister's Theorem on the Representation of Positive Functions as Sums of Squares	146
§3. Cassels' and Pfister's Representation Theorems	148
§4. Applications: Fields of Prescribed Level. Characterization of Pfister Forms	151
§5. The Function Field of a Quadratic Form and the Main Theorem of Arason and Pfister	153
§6. Generic Zeros and Generic Splitting	156
§7. Knebusch's Filtration of the Witt Ring	163

Chapter 5. Rational Quadratic Forms 166

§1. Symmetric Bilinear Forms and Quadratic Forms on Finite Abelian Groups	166
§2. Gaussian Sums for Quadratic Forms on Finite Abelian Groups	171
§3. The Witt Group of $\mathbb{Q}$	174
§4. The Witt Group of $\mathbb{Z}$	178
§5. Gauss' First Proof of the Quadratic Reciprocity Law. . .	180
§6. Quadratic Forms over the p -adic Numbers	185
§7. Hilbert's Reciprocity Law and the Hasse-Minkowski Theorem	191
§8. Calculation of Gaussian Sums	195

Chapter 6. Symmetric Bilinear Forms over Dedekind Rings and Global Fields 201

§1. Symmetric Bilinear Forms over Dedekind Rings	201
§2. Symmetric Bilinear Forms over Discrete Valuation Rings	207
§3. Symmetric Bilinear Forms over Polynomial Rings and Rational Function Fields	211
§4. Symmetric Bilinear Forms over p -adic Fields	216
§5. The Hilbert Reciprocity Theorem	220

§ 6. The Hasse-Minkowski Theorem	222
§ 7. Hecke's Theorem on the Different	227
§ 8. The Residue Theorem	231

Chapter 7. Foundations of the Theory of Hermitian Forms . . . 235

§ 1. Basic Definitions	235
§ 2. Hermitian Categories	240
§ 3. Quadratic Forms	245
§ 4. Transfer and Reduction	250
§ 5. Hermitian Abelian Categories	256
§ 6. Hermitian Forms over Skew Fields	258
§ 7. Hyperbolic Forms and the Unitary Group	261
§ 8. Alternating Forms and the Symplectic Group	264
§ 9. Witt's Theorem	265
§ 10. The Krull-Schmidt Theorem	270
§ 11. Examples and Applications	276

Chapter 8. Simple Algebras and Involutions 280

§ 1. Simple Rings and Modules	280
§ 2. Tensor Products	285
§ 3. Central Simple Algebras. The Brauer Group	287
§ 4. Simple Algebras	290
§ 5. Central Simple Algebras under Field Extensions. Reduced Norms and Traces	293
§ 6. Examples	299
§ 7. Involutions on Simple Algebras. The Classification Prob- lem	300
§ 8. Existence of Involutions	304
§ 9. The Corestriction. Existence of Involutions of the Second Kind	307
§ 10. An Extension Theorem for Involutions	311
§ 11. Quaternion Algebras	312
§ 12. Cyclic Algebras	316
§ 13. The Canonical Involution on the Group Algebra	320

Chapter 9. Clifford Algebras 326

§ 1. Graded Algebras	326
§ 2. Clifford Algebras	328
§ 3. The Spinor Norm	334
§ 4. Quadratic Forms over Fields in Characteristic 2	338

Chapter 10. Hermitian Forms over Global Fields	346
§1. Hermitian Forms over Commutative Fields and Quaternion Algebras	347
§2. Simple Algebras and Involutions over Local and Global Fields	352
§3. Skew Hermitian Forms over Quaternion Fields	357
§4. Skew Hermitian Forms over Global Quaternion Fields	365
§5. The Strong Approximation Theorem	371
§6. Hermitian Forms for Unitary Involutions. Statement of Results	372
§7. Proof of the Weak Local Global Principle	380
§8. Conclusion of the Proof	383
Appendix	391
Bibliography	402
Index	418
