Foreword (by Gian-Carlo Rota)	9
Introduction	11
Acknowledgements	14

Chapter I. Origins and basic concepts

Commentary

1. 1 The origins of matroid theory	15
1. 2 Geometric lattices	24
1. 3 Orthogonal duality	25
1. 4 Exchange lattices	28
1. 5 Survey of the early literature	29
1. 6 Strong maps	48

Reprints

1. Whitney, H.: On the abstract properties of linear dependence, <i>American Journal of Mathematics</i> 57 (1935), 509-533	55
2. Birkhoff, G.: Abstract linear dependence in lattices, <i>American Journal of Mathematics</i> 57 (1935), 800-804	81
3. Whitney, H.: Non-separable and planar graphs, <i>Transactions of the American Mathematical Society</i> 34 (1932), 339-362	87
4. Mac Lane, S.: A lattice formulation for transcendence degrees and p -bases, <i>Duke Mathematical Journal</i> 4 (1938), 455-468	111
5. Higgs, D. A.: Strong maps of geometries, <i>Journal of Combinatorial Theory</i> 5 (1968), 185-191. (MR 38 #89)	125

Chapter II: Linear representations of matroids

Commentary

2. 1 Non-representable matroids	133
2. 2 Homotopy	137
2. 3 Binary and regular matroids	140
2. 4 Ternary matroids	144

Reprints

1. Mac Lane, S.: Some interpretation of abstract linear dependence in terms of projective geometry, <i>American Journal of Mathematics</i> 58 (1936), 236-240.	147
2. Tutte, W.T.: A homotopy theorem for matroids, I and II, . . . <i>Transactions of the American Mathematical Society</i> 88 (1958), 144-174. (MR 21 # 336)	153
3. Seymour, P.D.: Matroid representation over $GF(3)$, <i>Journal of Combinatorial Theory Ser. B</i> 26 (1979), 159-173. (MR 80k: 05031)	185

Chapter III. Enumeration in geometric lattices

Commentary

3. 1 Möbius functions	201
3. 2 Homology	201
3. 3 Modular factorization	204
3. 4 Whitney numbers of the second kind	205
3. 5 The Sperner property	209

Reprints

1. Rota, G.-C.: On the foundations of combinatorial theory I. Theory of Möbius functions, <i>Zeitschrift für Wahrscheinlichkeitstheorie und Verwandte Gebiete</i> 2 (1964), 340-368. (MR 30 # 4688)	213
--	-----

2.	Folkman, J.: The homology groups of a lattice, ,	243
	<i>Journal of Mathematics and Mechanics</i> 15 (1966), 631-636. (MR 32 # 5557)	
3.	Stanley, R. P.: Modular elements in geometric lattices,	249
	<i>Algebra Universalis</i> 1 (1971), 214-217. (MR 45 # 5037)	
4.	Dilworth, R. P. and Greene, C.: A counterexample to the generalization of Sperner's theorem,	253
	<i>Journal of Combinatorial Theory</i> 10 (1971), 18-21. (MR 43 # 1893)	
5.	Dowling, T. A. and Wilson, R. M.: Whitney number inequalities for geometric lattices,	257
	<i>Proceedings of the American Mathematical Society</i> 47 (1975), 504-512. (MR 50 #6900)	

Chapter IV: The Tutte decomposition

Commentary

4.1	Contractions and deletions	267
4.2	The critical problem	273
4.3	Cutting up space	278

Reprints

1.	Tutte, W. T.: A ring in graph theory,	283
	<i>Proceedings of the Cambridge Philosophical Society</i> 43 (1947), 26-40. (MR 8, 284k)	
2.	Greene, C.: Weight enumeration and the geometry of linear codes,	299
	<i>Studies in Applied Mathematics</i> 55 (1976), 119-128. (MR 56 # 5335)	
3.	Zaslavsky, T.: Facing up to arrangements: Face-count formulas for partition of space by hyperplanes,	309
	<i>Memoirs of the American Mathematical Society Number 154</i> , American Mathematical Society, Providence, R. I., 1975. Extract. (MR 50 # 9603)	

Chapter V: Recent advances

Commentary

5.1 Regular matroids	333
5.2 Hereditary classes of matroids	335

Reprints

1. P. D. Seymour, Decomposition of regular matroids, <i>Journal of Combinatorial Theory Ser. B</i> 28(1980), 305-359. (MR 82j: 05046)	339
2. J. Kahn and J.P.S. Kung, Varieties of combinatorial geometries, <i>Transactions of the American Mathematical Society</i> 271(1982), 485-499. (MR 84j: 05043)	395
