Contents

Preface *xv*

1 Introduction *1*
1.1 Overview *1*
1.2 Decoding Complexity in Chemical Kinetics *2*
1.3 Three Types of Chemical Kinetics *3*
1.3.1 Applied Kinetics *3*
1.3.2 Detailed Kinetics *3*
1.3.3 Mathematical Kinetics *4*
1.4 Challenges and Goals. How to Kill Chemical Complexity *4*
1.4.1 "Gray-Box" Approach *4*
1.4.2 Analysis of Kinetic Fingerprints *5*
1.4.3 Non-Steady-State Kinetic Screening *6*
1.5 What Our Book Is Not About. Our Book among Other Books on Chemical Kinetics *6*
1.6 The Logic in the Reasoning of This Book *7*
1.7 How Chemical Kinetics and Mathematics Are Interwoven in This Book *7*
1.8 History of Chemical Kinetics *8*

2 Chemical Reactions and Complexity *17*
2.1 Introduction *17*
2.2 Elementary Reactions and the Mass-Action Law *19*
2.2.1 Homogeneous Reactions *19*
2.2.2 Heterogeneous Reactions *21*
2.2.3 Rate Expressions *22*
2.3 The Reaction Rate and Net Rate of Production of a Component – A Big Difference *23*
2.4 Dimension of the Kinetic Parameters and Their Order of Magnitude *25*

2.5 Conclusions *26*
Notation *27*

3 Kinetic Experiments: Concepts and Realizations *29*
3.1 Introduction *29*
3.2 Experimental Requirements *29*
3.3 Material Balances *30*
3.4 Classification of Reactors for Kinetic Experiments *31*
3.4.1 Steady-State and Non-Steady-State Reactors *31*
3.4.2 Transport in Reactors *32*
3.4.3 Ideal Reactors *32*
3.4.3.1 Batch Reactor *32*
3.4.3.2 Continuous Stirred-Tank Reactor *33*
3.4.3.3 Plug-Flow Reactor *34*
3.4.4 Ideal Reactors with Solid Catalyst *35*
3.4.4.1 Batch Reactor *35*
3.4.4.2 Continuous Stirred-Tank Reactor *35*
3.4.4.3 Plug-Flow Reactor *36*
3.4.4.4 Pulse Reactor *37*
3.4.5 Determination of the Net Rate of Production *37*
3.5 Formal Analysis of Typical Ideal Reactors *38*
3.5.1 Batch Reactor *38*
3.5.1.1 Irreversible Reaction *38*
3.5.1.2 Reversible Reaction *39*
3.5.1.3 How to Distinguish Parallel Reactions from Consecutive Reactions *41*
3.5.2 Steady-State Plug-Flow Reactor *46*
3.5.3 Non-Steady-State Continuous Stirred-Tank Reactor *46*
3.5.3.1 Irreversible Reaction *46*
3.5.3.2 Reversible Reaction *47*
3.5.4 Thin-Zone Temporal-Analysis-of-Products Reactor *48*
3.6 Kinetic-Model-Free Analysis *49*
3.6.1 Steady State *49*
3.6.2 Non-Steady State *51*
3.6.2.1 Continuous Stirred-Tank Reactor *51*
3.6.2.2 Plug-Flow Reactor *52*
3.7 Diagnostics of Kinetic Experiments in Heterogeneous Catalysis *52*
3.7.1 Gradients at Reactor and Catalyst-Pellet Scale *52*
3.7.2 Experimental Diagnostics and Guidelines *53*
3.7.2.1 Test for External Mass Transfer Effect *54*
3.7.2.2 Test for Internal Mass Transport Effect *55*
3.7.2.3 Guidelines *56*

3.7.3 Theoretical Diagnostics *56*
3.7.3.1 External Mass-Transfer *57*
3.7.3.2 External Heat-Transfer *59*
3.7.3.3 Internal Mass Transport *60*
3.7.3.4 Internal Heat Transport *64*
3.7.3.5 Non-Steady-State Operation *64*
Notation *65*

4 Chemical Book-Keeping: Linear Algebra in Chemical Kinetics *69*
4.1 Basic Elements of Linear Algebra *69*
4.2 Linear Algebra and Complexity of Chemical Reactions *71*
4.2.1 Atomic Composition of Components: Molecules "Consist of" Atoms *72*
4.2.1.1 Molecular Matrix *72*
4.2.1.2 Linear Algebra and Laws of Mass Conservation *72*
4.2.1.3 Key Components and Their Number *74*
4.2.2 Stoichiometry of Chemical Reactions: Reactions "Consist of" Chemical Components *76*
4.2.2.1 Stoichiometric Matrix *76*
4.2.2.2 Similarity and Difference between the Conservation Law for Chemical Elements and the Kinetic Mass-Conservation Law *79*
4.2.2.3 Similarity and Difference between the Number of Key Components and the Number of Key Reactions *79*
4.2.3 Detailed Mechanism of Complex Reactions: Complex Reactions "Consist of" Elementary Reactions *79*
4.2.3.1 Mechanisms and Horiuti Numbers *79*
4.2.3.2 Matrices and Independent Routes of Complex Reactions *86*
4.3 Conclusions *89*
Notation *89*

5 Steady-State Chemical Kinetics: A Primer *93*
5.1 Introduction to Graph Theory *93*
5.2 Representation of Complex Mechanisms as Graphs *94*
5.2.1 Single-Route Mechanisms *95*
5.2.2 Single-Route Mechanism with a Buffer Step *97*
5.2.3 Two-Route Mechanisms *98*
5.2.4 Number of Independent Cycles and Horiuti's Rule *100*
5.3 How to Derive the Reaction Rate for a Complex Reaction *104*
5.3.1 Introduction *104*
5.3.2 Kinetic Cramer's Rule and Trees of the Chemical Graph *104*

5.3.3 Forward and Reverse Reaction Rates *111*
5.3.4 Single-Route Linear Mechanism – General Case *113*
5.3.5 How to Find the Kinetic Equation for the Reverse Reaction: The Horiuti–Boreskov Problem *114*
5.3.6 What about the Overall Reaction – A Provocative Opinion *116*
5.4 Derivation of Steady-State Kinetic Equations for a Single-Route Mechanism – Examples *118*
5.4.1 Two-Step Mechanisms *119*
5.4.1.1 Michaelis–Menten Mechanism *119*
5.4.1.2 Water–Gas Shift Reaction *120*
5.4.1.3 Liquid-Phase Hydrogenation *121*
5.4.2 Three-Step Mechanisms *122*
5.4.2.1 Oxidation of SO_2 *122*
5.4.2.2 Coupling Reaction *123*
5.4.3 Four-Step Mechanisms *124*
5.4.4 Five-Step Mechanisms *126*
5.4.5 Single-Route Linear Mechanisms with a Buffer Step *127*
5.5 Derivation of Steady-State Kinetic Equations for Multi-route Mechanisms: Kinetic Coupling *129*
5.5.1 Cycles Having a Common Intermediate *131*
5.5.2 Cycles Having a Common Step *132*
5.5.3 Cycles Having Two Common Steps *134*
5.5.4 Different Types of Coupling between Cycles *134*
Notation *135*

6 Steady-State Chemical Kinetics: Machinery *139*
6.1 Analysis of Rate Equations *139*
6.1.1 Parameters: Dependence on Temperature and Number of Identifiable Parameters *139*
6.1.2 Simplifying Assumptions *142*
6.1.2.1 Fast Step *142*
6.1.2.2 Rate-Limiting Step *143*
6.1.2.3 Quasi-Equilibrated Steps *144*
6.1.2.4 Irreversible Step(s) *145*
6.1.2.5 Dependence of the Reaction Rate on Concentrations *146*
6.2 Apparent Kinetic Parameters: Reaction Order and Activation Energy *147*
6.2.1 Definitions *147*
6.2.2 Two-Step Mechanism of an Irreversible Reaction *148*
6.2.2.1 Apparent Partial Reaction Order *148*
6.2.2.2 Apparent Activation Energy *150*
6.2.3 More Complicated Cases *150*
6.2.3.1 Apparent Partial Reaction Order *151*

6.2.3.2 Apparent Activation Energy *157*
6.2.4 Some Further Comments *158*
6.3 How to Reveal Mechanisms Based on Steady-State Kinetic Data *158*
6.3.1 Assumptions *158*
6.3.2 Direct and Inverse Problems of Kinetic Modeling *160*
6.3.3 Minimal and Non-minimal Mechanisms *160*
6.3.3.1 Two-Step Catalytic Mechanisms *161*
6.3.3.2 Three-Step Catalytic Mechanisms *161*
6.3.3.3 Four-Step Catalytic Mechanisms *163*
6.3.3.4 Five-Step Catalytic Mechanisms *163*
6.3.3.5 Summary *163*
6.3.4 What Kind of Kinetic Model Do We Need to Describe Steady-State Kinetic Data and for Decoding Mechanisms? *164*
6.3.4.1 Kinetic Resistance *164*
6.3.4.2 Analysis of the Kinetic Resistance in Identifying and Decoding Mechanisms and Models *165*
6.3.4.3 Concentration Terms of the Kinetic Resistance and the Structure of the Detailed Mechanism *166*
6.3.4.4 Principle of Component Segregation *170*
6.4 Conclusions *171*
Notation *171*

7 Linear and Nonlinear Relaxation. Stability *175*
7.1 Introduction *175*
7.1.1 Linear Relaxation *177*
7.1.2 Relaxation Times and Steady-State Reaction Rate *179*
7.1.2.1 Relaxation Times and Kinetic Resistance *179*
7.1.2.2 Temkin's Rule. Is It Valid? *181*
7.1.3 Further Comments *183*
7.2 Relaxation in a Closed System *183*
7.2.1 Principle of Detailed Equilibrium *183*
7.3 Stability – General Concept *187*
7.3.1 Elements of the Qualitative Theory of Differential Equations *187*
7.3.2 Local Stability – Rigorous Definition *190*
7.3.3 Local Stability – System with Two Variables *191*
7.3.3.1 Real Roots *193*
7.3.3.2 Imaginary Roots *194*
7.3.4 Analysis of Global Dynamics *195*
7.4 Simplifications of Non-Steady-State Models *197*
7.4.1 Abundance and Linearization *197*
7.4.2 Fast Step – Equilibrium Approximation *198*

7.4.3 Rate-Limiting Step Approximation *199*
7.4.4 Quasi-Steady-State Approximation *200*
Notation *206*

8 Nonlinear Mechanisms: Steady State and Dynamics *211*
8.1 Critical Phenomena *211*
8.2 Isothermal Critical Effects in Heterogeneous Catalysis: Experimental Facts *213*
8.2.1 Multiplicity of Steady States *213*
8.2.2 Self-Sustained Oscillations of the Reaction Rate in Heterogeneous Catalytic Reactions *215*
8.2.3 Diversity of Critical Phenomena and Their Causes *216*
8.3 Ideal Simple Models: Steady State *217*
8.3.1 Parallel and Consecutive Adsorption Mechanisms *217*
8.3.2 Impact Mechanisms *218*
8.3.3 Simplest Mechanism for the Interpretation of Multiplicity of Steady States *221*
8.3.4 Hysteresis: Influence of Reaction Reversibility *227*
8.3.5 Competition of Intermediates *233*
8.4 Ideal Simple Models: Dynamics *237*
8.4.1 Relaxation Characteristics of the Parallel Adsorption Mechanism *237*
8.4.2 Catalytic Oscillators *244*
8.4.2.1 Simplest Catalytic Oscillator *244*
8.4.2.2 Relaxation of Self-Sustained Oscillations: Model *250*
8.4.2.3 Other Catalytic Oscillators *250*
8.4.3 Fine Structure of Kinetic Dependences *254*
8.5 Structure of the Detailed Mechanism and Critical Phenomena: Relationships *256*
8.5.1 Mechanisms without Interaction between Intermediates *256*
8.5.2 Horn–Jackson–Feinberg Mechanism *258*
8.6 Non-Ideal Factors *262*
8.7 Conclusions *263*
Notation *263*

9 Kinetic Polynomials *273*
9.1 "Linear" Introduction to the Nonlinear Problem: Reminder *273*
9.2 "Nonlinear" Introduction *276*
9.3 Principles of the Approach: Quasi-Steady-State Approximation. Mathematical Basis *278*
9.3.1 Introduction *278*
9.3.2 Examples *279*

9.4 Kinetic Polynomials: Derivation and Properties *281*
9.4.1 Resultant Reaction Rate: A Necessary Mathematical Basis *281*
9.4.2 Properties of the Kinetic Polynomial *283*
9.4.3 Examples of Kinetic Polynomials *285*
9.4.3.1 Eley–Rideal Mechanism *285*
9.4.3.2 Langmuir Mechanism *286*
9.5 Kinetic Polynomial: Classical Approximations and Simplifications *287*
9.5.1 Rate-Limiting Step *288*
9.5.2 Vicinity of Thermodynamic Equilibrium *290*
9.5.3 Thermodynamic Branch *291*
9.6 Application of Results of the Kinetic-Polynomial Theory: Cycles across an Equilibrium *294*
9.7 Critical Simplification *301*
9.7.1 Critical Simplification: A Simple Example *301*
9.7.2 Critical Simplification and Limitation *308*
9.7.3 Principle of Critical Simplification: General Understanding and Application *309*
9.8 Concluding Remarks *310*
Appendix *310*
Notation *312*

10 Temporal Analysis of Products: Principles, Applications and Theory *319*
10.1 Introduction *319*
10.2 The TAP Experiment *321*
10.3 Description and Operation of a TAP Reactor System *322*
10.4 Basic Principles of TAP *324*
10.5 Position of TAP among Other Kinetic Methods *326*
10.5.1 Uniformity of the Active Zone *327*
10.5.1.1 Continuous Stirred-Tank Reactor *327*
10.5.1.2 Plug-Flow Reactor *327*
10.5.1.3 TAP Reactor *327*
10.5.2 Domain of Conditions *327*
10.5.3 Possibility of Obtaining Relevant Kinetic Information *328*
10.5.4 Relationship between Observed Kinetic Characteristics and Catalyst Properties *328*
10.5.5 Model-Free Kinetic Data Interpretation *329*
10.5.6 Summary *330*
10.6 Qualitative TAP Data Analysis. Examples *332*
10.6.1 Single-Pulse TAP Experiments *332*
10.6.2 Pump–Probe TAP Experiments *333*
10.6.3 Multipulse TAP Experiments *336*

10.7 Quantitative TAP Data Description. Theoretical Analysis *338*
10.7.1 One-Zone Reactor *338*
10.7.1.1 Diffusion Only *338*
10.7.1.2 Irreversible Adsorption *342*
10.7.1.3 Reversible Adsorption *343*
10.7.2 Two- and Three-Zone Reactors *344*
10.7.3 Thin-Zone TAP Reactor Configuration *345*
10.7.4 Moment-Based Quantitative Description of TAP Experiments *347*
10.8 Kinetic Monitoring: Strategy of Interrogative Kinetics *350*
10.8.1 State-by-State Kinetic Monitoring. Example: Oxidation of Furan *350*
10.8.2 Strategy of Interrogative Kinetics *357*
10.9 Theoretical Frontiers *358*
10.9.1 Global Transfer Matrix Equation *358*
10.9.2 Y Procedure *359*
10.9.2.1 Principles of the Solution *360*
10.9.2.2 Exact Mathematical Solution *363*
10.9.2.3 How to Reconstruct the Active Zone Concentration and Reaction Rate in Practice *364*
10.9.2.4 Numerical Experiments *366*
10.9.2.5 Summary of the Y Procedure *369*
10.9.3 Probabilistic Theory of Single-Particle TAP Experiments *371*
10.10 Conclusions: What Next? *372*
Notations *373*

11 Decoding the Past *383*
11.1 Chemical Time and Intermediates. Early History *383*
11.2 Discovery of Catalysis and Chemical Kinetics *383*
11.3 Guldberg and Waage's Breakthrough *385*
11.4 Van't Hoff's Revolution: Achievements and Contradictions *386*
11.4.1 Undisputable Achievements *386*
11.4.2 Contradictions *386*
11.5 Post-Van't Hoff Period: Reaction Is Not a Single-Act Drama *387*
11.6 All-in-All Confusion: Attempts at Understanding *388*
11.7 Out of Confusion: Physicochemical Understanding *389*
11.8 Towards Mathematical Chemical Kinetics *390*
Notation *395*

12 Decoding the Future *401*
12.1 A Great Achievement, A Great Illusion *401*
12.2 A New Paradigm for Decoding Chemical Complexity *402*
12.2.1 Advanced Experimental Kinetic Tools *403*
12.2.2 New Mathematical Tools: Chemical Kinetics and Mathematics *405*

Glossary *409*
Index *415*
