1 Double Contrast Enema: Technical Aspects	1
1.1 Preparation of the Patient	1
1.1.1 Objectives	1
1.1.2 Procedure	2
1.2 Barium Preparation	5
1.3 Material	5
1.4 Radiologic Examination	6
1.4.1 Objectives	6
1.4.2 Preliminary Procedure	6
1.4.3 Procedure	6
1.5 Contraindications	11
1.6 Complications	11
1.7 Conclusion	12
References	12
2 Interpretation (General Rules, Normal and False Images)	13
2.1 General Rules of Interpretation	13
2.1.1 Different Radiologic Aspects of the Colon and the Formation Mechanism of the Image	13
2.1.2 Importance of the Spatial Configuration of the Colon and the Patient's Position for Air and Barium Distribution	24
2.2 Colonic Morphology and Motor Activity	30
2.2.1 Morphology	30
2.2.2 Motor Activity	32
2.3 Normal Appearance of the Colonic Mucosa (Walls and Margins), Physiologic Variants, False Images	35
2.3.1 Poor Coating Quality in Double Contrast	35
2.3.2 False Images	39
2.3.3 Normal Modifications in the Mucosal Line	43
2.4 Interpreting the Examination	47
References	47

3 Radiologic Signs in Tumoral Pathology:	
Polyps and Polyposis Syndromes	49
3.1 Introduction	49
3.2 Polyps	49
3.2.1 Macroscopic Appearance of Polyps	50
3.2.2 Radiologic Polyp Images	50
3.2.3 Diagnostic Problems	67
3.3 Colonic Polyposis	73
3.3.1 Early-Stage Polyposis	74
3.3.2 Advanced Polyposis	78
3.3.3 Appearances Specific to Certain Polyposis Syndromes	81
References	84
 4 Primary Colorectal Cancer	 85
4.1 Nonspecific Radiologic Appearances of Colorectal Carcinoma	86
4.2 Radiologic Signs Indicating the Malignant Nature of a Polyp	86
4.2.1 Size	86
4.2.2 Basal Indentation	87
4.2.3 Volume Doubling Time	87
4.2.4 Other Signs for Consideration	87
4.3 Classic Appearances of Primary Colorectal Carcinoma	90
4.3.1 The Strictly Vegetative Form	90
4.3.2 The Vegetative Ulcerative and Infiltrating Form	90
4.3.3 Strict Infiltrating Forms	99
4.4 Effectiveness of the Double Contrast Enema in Colorectal Carcinoma	99
References	102
 5 Villomas	 103
5.1 Nonspecific Features	104
5.2 Indicative and Specific Features	104
5.3 The Radiologic Diagnosis of Malignancy Remains Problematic	108
References	110
 6 Ulcerative Colitis	 111
6.1 Radiologic Pathology	111
6.2 Radiologic Appearance	112
6.2.1 Motor Activity Changes and Caliber and Haustral Abnormalities	112
6.2.2 Changes in the Colonic Mucosa (Walls and Margins)	116
6.3 Differential Diagnosis	124
References	124

7 Crohn's Disease of the Colon	125
7.1 Pathology	125
7.1.1 Lesion Distribution	125
7.1.2 Stage of Disease	125
7.2 Correspondence of Radiologic Images to the Lesions	126
7.2.1 Early Stage	126
7.2.2 Advanced Stages	131
7.2.3 Remissions	139
7.2.4 Diagnostic Value of Radiologic Signs	139
7.2.5 Complications	141
7.3 Conclusion	145
References	145
 8 Colonic Diverticulosis	 147
8.1 Physiopathogenic Review	147
8.2 Pathology Review	147
8.2.1 Development and Site of Diverticula	147
8.2.2 Defects of the Colonic Muscular Coat	151
8.2.3 Diverticular Inflammation	151
8.3 Radiologic Aspects of Colonic Diverticulosis	153
8.3.1 Problems of Double Contrast in the Study of Diverticulosis	153
8.3.2 Radiologic Features of Noncomplicated Diverticulosis	153
8.4 Diverticulosis and Diverticulitis	161
8.5 Diverticulosis and Associated Lesions	163
8.5.1 The Detection of Associated Polyps Requires	163
8.5.2 Differentiation Between the Colonic Stenosis Caused by Cancer and That Caused by Diverticulosis	163
8.6 Conclusion	163
References	164
 9 Conclusion	 165
