Introduction to the Subject	1
General Basic Ideas	4
CHAPTER 37	
Introductory Typical Examples	12
§37.1. Real Functions in \mathbb{R}^1	13
§37.2. Convex Functions in \mathbb{R}^1	15
§37.3. Real Functions in \mathbb{R}^N , Lagrange Multipliers, Saddle Points, and Critical Points	16
§37.4. One-Dimensional Classical Variational Problems and Ordinary Differential Equations, Legendre Transformations, the Hamilton–Jacobi Differential Equation, and the Classical Maximum Principle	20
§37.5. Multidimensional Classical Variational Problems and Elliptic Partial Differential Equations	41
§37.6. Eigenvalue Problems for Elliptic Differential Equations and Lagrange Multipliers	43
§37.7. Differential Inequalities and Variational Inequalities	44
§37.8. Game Theory and Saddle Points, Nash Equilibrium Points and Pareto Optimization	47
§37.9. Duality between the Methods of Ritz and Trefftz, Two-Sided Error Estimates	50
§37.10. Linear Optimization in \mathbb{R}^N , Lagrange Multipliers, and Duality	51
§37.11. Convex Optimization and Kuhn–Tucker Theory	55
§37.12. Approximation Theory, the Least-Squares Method, Deterministic and Stochastic Compensation Analysis	58
§37.13. Approximation Theory and Control Problems	64
	xv

§37.14.	Pseudoinverses, Ill-Posed Problems and Tihonov Regularization	65
§37.15.	Parameter Identification	71
§37.16.	Chebyshev Approximation and Rational Approximation	73
§37.17.	Linear Optimization in Infinite-Dimensional Spaces, Chebyshev Approximation, and Approximate Solutions for Partial Differential Equations	76
§37.18.	Splines and Finite Elements	79
§37.19.	Optimal Quadrature Formulas	80
§37.20.	Control Problems, Dynamic Optimization, and the Bellman Optimization Principle	84
§37.21.	Control Problems, the Pontrjagin Maximum Principle, and the Bang-Bang Principle	89
§37.22.	The Synthesis Problem for Optimal Control	92
§37.23.	Elementary Provable Special Case of the Pontrjagin Maximum Principle	93
§37.24.	Control with the Aid of Partial Differential Equations	96
§37.25.	Extremal Problems with Stochastic Influences	97
§37.26.	The Courant Maximum-Minimum Principle. Eigenvalues, Critical Points, and the Basic Ideas of the Ljusternik-Schnirelman Theory	102
§37.27.	Critical Points and the Basic Ideas of the Morse Theory	105
§37.28.	Singularities and Catastrophe Theory	115
§37.29.	Basic Ideas for the Construction of Approximate Methods for Extremal Problems	132

TWO FUNDAMENTAL EXISTENCE AND UNIQUENESS PRINCIPLES

CHAPTER 38

Compactness and Extremal Principles	145
§38.1. Weak Convergence and Weak* Convergence	147
§38.2. Sequential Lower Semicontinuous and Lower Semicontinuous Functionals	149
§38.3. Main Theorem for Extremal Problems	151
§38.4. Strict Convexity and Uniqueness	152
§38.5. Variants of the Main Theorem	153
§38.6. Application to Quadratic Variational Problems	155
§38.7. Application to Linear Optimization and the Role of Extreme Points	157
§38.8. Quasisolutions of Minimum Problems	158
§38.9. Application to a Fixed-Point Theorem	161
§38.10. The Palais-Smale Condition and a General Minimum Principle	161
§38.11. The Abstract Entropy Principle	163

CHAPTER 39

Convexity and Extremal Principles	168
§39.1. The Fundamental Principle of Geometric Functional Analysis	170
§39.2. Duality and the Role of Extreme Points in Linear Approximation Theory	172
§39.3. Interpolation Property of Subspaces and Uniqueness	175
§39.4. Ascent Method and the Abstract Alternation Theorem	177
§39.5. Application to Chebyshev Approximation	180

EXTREMAL PROBLEMS WITHOUT SIDE CONDITIONS

CHAPTER 40

Free Local Extrema of Differentiable Functionals and the Calculus of Variations	189
§40.1. n th Variations, G-Derivative, and F-Derivative	191
§40.2. Necessary and Sufficient Conditions for Free Local Extrema	193
§40.3. Sufficient Conditions by Means of Comparison Functionals and Abstract Field Theory	195
§40.4. Application to Real Functions in \mathbb{R}^N	195
§40.5. Application to Classical Multidimensional Variational Problems in Spaces of Continuously Differentiable Functions	196
§40.6. Accessory Quadratic Variational Problems and Sufficient Eigenvalue Criteria for Local Extrema	200
§40.7. Application to Necessary and Sufficient Conditions for Local Extrema for Classical One-Dimensional Variational Problems	203

CHAPTER 41

Potential Operators	229
§41.1. Minimal Sequences	232
§41.2. Solution of Operator Equations by Solving Extremal Problems	233
§41.3. Criteria for Potential Operators	234
§41.4. Criteria for the Weak Sequential Lower Semicontinuity of Functionals	235
§41.5. Application to Abstract Hammerstein Equations with Symmetric Kernel Operators	237
§41.6. Application to Hammerstein Integral Equations	239

CHAPTER 42

Free Minima for Convex Functionals, Ritz Method and the Gradient Method	244
§42.1. Convex Functionals and Convex Sets	245
§42.2. Real Convex Functions	246

§42.3.	Convexity of F , Monotonicity of F' , and the Definiteness of the Second Variation	247
§42.4.	Monotone Potential Operators	249
§42.5.	Free Convex Minimum Problems and the Ritz Method	250
§42.6.	Free Convex Minimum Problems and the Gradient Method	252
§42.7.	Application to Variational Problems and Quasilinear Elliptic Differential Equations in Sobolev Spaces	255

EXTREMAL PROBLEMS WITH SMOOTH SIDE CONDITIONS

CHAPTER 43

Lagrange Multipliers and Eigenvalue Problems	273
§43.1. The Abstract Basic Idea of Lagrange Multipliers	274
§43.2. Local Extrema with Side Conditions	276
§43.3. Existence of an Eigenvector Via a Minimum Problem	278
§43.4. Existence of a Bifurcation Point Via a Maximum Problem	279
§43.5. The Galerkin Method for Eigenvalue Problems	281
§43.6. The Generalized Implicit Function Theorem and Manifolds in B-Spaces	282
§43.7. Proof of Theorem 43.C	288
§43.8. Lagrange Multipliers	289
§43.9. Critical Points and Lagrange Multipliers	291
§43.10. Application to Real Functions in \mathbb{R}^N	293
§43.11. Application to Information Theory	294
§43.12. Application to Statistical Physics. Temperature as a Lagrange Multiplier	296
§43.13. Application to Variational Problems with Integral Side Conditions	299
§43.14. Application to Variational Problems with Differential Equations as Side Conditions	300

CHAPTER 44

Ljusternik–Schnirelman Theory and the Existence of Several Eigenvectors	313
§44.1. The Courant Maximum-Minimum Principle	314
§44.2. The Weak and the Strong Ljusternik Maximum-Minimum Principle for the Construction of Critical Points	316
§44.3. The Genus of Symmetric Sets	319
§44.4. The Palais–Smale Condition	321
§44.5. The Main Theorem for Eigenvalue Problems in Infinite-Dimensional B-spaces	324
§44.6. A Typical Example	328
§44.7. Proof of the Main Theorem	330

§44.8.	The Main Theorem for Eigenvalue Problems in Finite-Dimensional B-Spaces	335
§44.9.	Application to Eigenvalue Problems for Quasilinear Elliptic Differential Equations	336
§44.10.	Application to Eigenvalue Problems for Abstract Hammerstein Equations with Symmetric Kernel Operators	337
§44.11.	Application to Hammerstein Integral Equations	339
§44.12.	The Mountain Pass Theorem	339

CHAPTER 45

Bifurcation for Potential Operators		351
§45.1.	Krasnoselskii's Theorem	351
§45.2.	The Main Theorem	352
§45.3.	Proof of the Main Theorem	354

EXTREMAL PROBLEMS WITH GENERAL SIDE CONDITIONS

CHAPTER 46

Differentiable Functionals on Convex Sets		363
§46.1.	Variational Inequalities as Necessary and Sufficient Extremal Conditions	363
§46.2.	Quadratic Variational Problems on Convex Sets and Variational Inequalities	364
§46.3.	Application to Partial Differential Inequalities	365
§46.4.	Projections on Convex Sets	366
§46.5.	The Ritz Method	367
§46.6.	The Projected Gradient Method	368
§46.7.	The Penalty Functional Method	370
§46.8.	Regularization of Linear Problems	372
§46.9.	Regularization of Nonlinear Problems	375

CHAPTER 47

Convex Functionals on Convex Sets and Convex Analysis		379
§47.1.	The Epigraph	380
§47.2.	Continuity of Convex Functionals	383
§47.3.	Subgradient and Subdifferential	385
§47.4.	Subgradient and the Extremal Principle	386
§47.5.	Subgradient and the G-Derivative	387
§47.6.	Existence Theorem for Subgradients	387
§47.7.	The Sum Rule	388

§47.8.	The Main Theorem of Convex Optimization	390
§47.9.	The Main Theorem of Convex Approximation Theory	392
§47.10.	Generalized Kuhn–Tucker Theory	392
§47.11.	Maximal Monotonicity, Cyclic Monotonicity, and Subgradients	396
§47.12.	Application to the Duality Mapping	399

CHAPTER 48

General Lagrange Multipliers (Dubovickii–Miljutin Theory)		407
§48.1.	Cone and Dual Cone	408
§48.2.	The Dubovickii–Miljutin Lemma	411
§48.3.	The Main Theorem on Necessary and Sufficient Extremal Conditions for General Side Conditions	413
§48.4.	Application to Minimum Problems with Side Conditions in the Form of Equalities and Inequalities	416
§48.5.	Proof of Theorem 48.B	419
§48.6.	Application to Control Problems (Pontrjagin’s Maximum Principle)	422
§48.7.	Proof of the Pontrjagin Maximum Principle	426
§48.8.	The Maximum Principle and Classical Calculus of Variations	433
§48.9.	Modifications of the Maximum Principle	435
§48.10.	Return of a Spaceship to Earth	437

SADDLE POINTS AND DUALITY

CHAPTER 49

General Duality Principle by Means of Lagrange Functions and Their Saddle Points		457
§49.1.	Existence of Saddle Points	457
§49.2.	Main Theorem of Duality Theory	460
§49.3.	Application to Linear Optimization Problems in B-Spaces	463

CHAPTER 50

Duality and the Generalized Kuhn–Tucker Theory		479
§50.1.	Side Conditions in Operator Form	479
§50.2.	Side Conditions in the Form of Inequalities	482

CHAPTER 51

Duality, Conjugate Functionals, Monotone Operators and Elliptic Differential Equations		487
§51.1.	Conjugate Functionals	489
§51.2.	Functionals Conjugate to Differentiable Convex Functionals	492

§51.3. Properties of Conjugate Functionals	493
§51.4. Conjugate Functionals and the Lagrange Function	496
§51.5. Monotone Potential Operators and Duality	499
§51.6. Applications to Linear Elliptic Differential Equations, Trefftz's Duality	502
§51.7. Application to Quasilinear Elliptic Differential Equations	506

CHAPTER 52

General Duality Principle by Means of Perturbed Problems and Conjugate Functionals	512
§52.1. The S -Functional, Stability, and Duality	513
§52.2. Proof of Theorem 52.A	515
§52.3. Duality Propositions of Fenchel–Rockafellar Type	517
§52.4. Application to Linear Optimization Problems in Locally Convex Spaces	519
§52.5. The Bellman Differential Inequality and Duality for Nonconvex Control Problems	521
§52.6. Application to a Generalized Problem of Geometrical Optics	525

CHAPTER 53

Conjugate Functionals and Orlicz Spaces	538
§53.1. Young Functions	538
§53.2. Orlicz Spaces and Their Properties	539
§53.3. Linear Integral Operators in Orlicz Spaces	541
§53.4. The Nemyckii Operator in Orlicz Spaces	542
§53.5. Application to Hammerstein Integral Equations with Strong Nonlinearities	542
§53.6. Sobolev–Orlicz Spaces	544

VARIATIONAL INEQUALITIES

CHAPTER 54

Elliptic Variational Inequalities	551
§54.1. The Main Theorem	551
§54.2. Application to Coercive Quadratic Variational Inequalities	552
§54.3. Semicoercive Variational Inequalities	553
§54.4. Variational Inequalities and Control Problems	556
§54.5. Application to Bilinear Forms	558
§54.6. Application to Control Problems with Elliptic Differential Equations	559
§54.7. Semigroups and Control of Evolution Equations	560

§54.8. Application to the Synthesis Problem for Linear Regulators	561
§54.9. Application to Control Problems with Parabolic Differential Equations	562
CHAPTER 55	
Evolution Variational Inequalities of First Order in H-Spaces	568
§55.1. The Resolvent of Maximal Monotone Operators	569
§55.2. The Nonlinear Yosida Approximation	570
§55.3. The Main Theorem for Inhomogeneous Problems	570
§55.4. Application to Quadratic Evolution Variational Inequalities of First Order	572
CHAPTER 56	
Evolution Variational Inequalities of Second Order in H-Spaces	577
§56.1. The Main Theorem	577
§56.2. Application to Quadratic Evolution Variational Inequalities of Second Order	578
CHAPTER 57	
Accretive Operators and Multivalued First-Order Evolution Equations in B-Spaces	581
§57.1. Generalized Inner Products on B-Spaces	582
§57.2. Accretive Operators	583
§57.3. The Main Theorem for Inhomogeneous Problems with m -Accretive Operators	584
§57.4. Proof of the Main Theorem	585
§57.5. Application to Nonexpansive Semigroups in B-Spaces	593
§57.6. Application to Partial Differential Equations	594
Appendix	599
References	606
List of Symbols	637
List of Theorems	643
List of the Most Important Definitions	647
Index	651
