Contents

^{13}C -NMR in Metabolic Studies

T. J. SIMPSON (With 15 Figures)

1	Introduction	1
2	The Design and Interpretation of Labelling Experiments	1
3	Radioisotope Labelling	3
4	^{13}C NMR Spectroscopy	4
4.1	Assignment of ^{13}C NMR Spectra	4
4.1.1	Known Chemical Shifts and Substituent Chemical Shift Effects	4
4.1.2	Off-Resonance and Specific Proton Decoupling	5
4.1.3	Analysis of Long-Range ^1H - ^{13}C Couplings	5
4.1.4	Polarisation Transfer and 2D NMR Methods	7
4.1.5	Lanthanide-Induced Shift Studies	9
4.1.6	Model and Derivative Studies	9
4.1.7	Synthesis of Isotopically Labelled Compounds	9
4.1.8	Incorporation Studies	10
5	Biosynthetic Methodology	10
5.1	Precursor Incorporation	11
6	^{13}C Enrichment Studies	11
6.1	Single ^{13}C -Labelling	12
6.1.1	Quantitative ^{13}C Measurements	13
6.1.2	Single ^{13}C -Labelling Studies in Plants	14
6.2	^{13}C - ^{13}C Spin-Spin Coupling	17
6.2.1	Singly ^{13}C -Labelled Precursors	17
6.2.2	Double ^{13}C -Labelled Precursors	19
6.2.3	Non-Contiguous Double ^{13}C -Labelling	27
6.2.3.1	Two-Bond ^{13}C - ^{13}C Couplings from Contiguous $^{13}\text{C}_2$ -Labelled Precursors	27
6.2.3.2	One-Bond ^{13}C - ^{13}C Couplings from Non-Contiguous $^{13}\text{C}_2$ -Labelled Precursors	27
6.2.3.3	Two-Bond Couplings from Non-Contiguous $^{13}\text{C}_2$ -Labelled Precursors	29
7	^{13}C , ^{15}N Doubly Labelled Precursors	29
8	Isotope-Induced Shifts in ^{13}C NMR	31
8.1	The Deuterium Alpha-Shift Technique	32
8.2	The Deuterium Beta-Shift Technique	35
8.3	^{18}O Isotope Induced Shifts in ^{13}C NMR	37
9	Conclusion	38
	References	39

Determination of the Energy Status of Plant Cells by ^{31}P -Nuclear Magnetic Resonance Spectroscopy

J. K. M. ROBERTS (With 8 Figures)

1	Introduction	43
2	Principles	44
3	Experimental Considerations	45
4	Quantitation of Metabolite Concentrations of vivo by NMR	47
5	Measurement of Nucleoside Di- and Triphosphate Levels by ^{31}P -NMR	49
6	Estimation of the Extent of Magnesium Ion Binding to Nucleoside Triphosphates in vivo by ^{31}P -NMR	52
7	Measurement of the Gibbs' Free Energy for Hydrolysis of ATP	53
8	Relationship of in vivo ^{31}P -NMR Measurements to What Is Seen by Other Methods	55
9	Conclusions	57
	References	57

The Use of NMR Spectroscopy to Follow Deuterium in Studies of Fungal Metabolism

C. ABELL (With 2 Figures)

1	Introduction	60
2	Deuterium NMR Spectroscopy	61
2.1	Background and Techniques	61
2.1.1	The Nuclear Magnetic Properties of Deuterium	61
2.1.2	The Deuterium NMR Spectrum	61
2.1.3	Recording a Deuterium NMR Spectrum	63
2.2	Applications of Deuterium NMR Spectroscopy to Fungal Metabolism	64
2.2.1	Administering the Precursor	64
2.2.2	Establishing the Retention or Loss of a Hydrogen	65
2.2.3	Establishing Precursor-Product Relationships	66
2.2.4	Mechanistic Studies	68
2.2.4.1	Displacement Reactions	68
2.2.4.2	Incorporation of Deuterium Atoms from the Medium	68
2.2.4.3	Following Hydride Shifts	69
2.2.5	The Use of $[2\text{-}^2\text{H}_3]$ -Acetate as a Polyketide Precursor	71
2.3	Kinetic Isotope Effects	73
2.4	The Use of Shift Reagents	74
3	Detection of Deuterium Indirectly in the ^{13}C -NMR Spectrum	75
3.1	Background and Techniques	75
3.1.1	Detecting Deuterium Directly Attached to a Carbon Reporter Nucleus (the α -Shift Technique)	76
3.1.2	Detecting Deuterium on a Carbon Adjacent to the Reporter Nucleus (the β -Shift Technique)	77
3.2	Applications to the Study of Biosynthesis in Fungi	79
3.2.1	Quantitative Measurements of Deuterium Retention	80

3.2.2 Determining the Multiplicity of Labelling	83
3.2.3 Labelling a Bond	84
4 Conclusions	85
References	85

Proton NMR Studies on DNA Structure

P. BENDEL (With 6 Figures)

1 Introduction	90
2 Theoretical Background	91
2.1 Chemical Shifts	91
2.2 Coupling Constants	91
2.3 NOE	92
2.4 Assignments	94
3 Examples	95
4 Summary	101
References	101

NMR Methods for Determination of Intracellular pH

J. K. M. ROBERTS (With 6 Figures)

1 Introduction	106
2 Some Principles	107
3 Determinants of Chemical Shift	109
4 Measurement of Chemical Shifts	111
5 Estimating Intracellular pH from Chemical Shifts: Titration Curves	112
6 Other Factors Contributing to Potential Errors in Intracellular pH Measurements Using NMR	115
7 Observation of pH Heterogeneity in Cell Populations and Tissues by NMR	116
8 NMR Signals That Have Been Used as Intracellular pH Indicators	118
9 Assignment of Resonances	121
10 Can the pH in Compartments Other Than Cytoplasm and Vacuole be Measured in Vivo by NMR Methods?	122
11 Conclusions	124
References	124

Orientation of Chloroplasts in Leaves by ¹H NMR Spectroscopy

D. C. MCCAIN (With 8 Figures)

1 Introduction	127
1.1 What is NMR?	127
1.2 NMR Spectra of Plant Leaves	128
2 Experimental Technique	132
2.1 Choosing an NMR Spectrometer	132
2.2 Sample Holders	132
2.3 Sample Preparation	133
2.4 Operating the Spectrometer	134

3	Data Analysis	135
3.1	The Need for a Theory	135
3.2	Review of Leaf Anatomy and Physiology	136
3.3	The Theory	137
3.4	The Model	138
3.5	Calculations	139
4	Examples of Interpreted Spectra	142
4.1	Orientation Dependence	142
4.2	Species Dependence	142
4.3	Effects of Drying	144
4.4	Effects of Freezing	145
5	Future Directions	146
	References	147

^{13}C -NMR Determination of Rubber Content in Guayule Bushes

J. VISINTAINER and R. C. HIRST (With 11 Figures)

1	Introduction	148
1.1	Background	148
1.2	Analytical Methods	148
2	Experimental	149
2.1	^{13}C -NMR Spectra	149
2.2	Sample Preparation	149
2.2.1	Guayule Material	149
2.2.2	Sample Geometry	150
2.3	Calibration Curve	150
3	Results and Discussion	151
3.1	^{13}C -NMR Spectra	151
3.2	Sample Preparation	155
3.2.1	Guayule Sample	155
3.2.2	Sample Geometry	156
3.2.2.1	Calibration Plot	157
3.3	Quantitative Results	158
3.3.1	Milled Bush	158
3.3.1.1	Precision of the Method	160
3.3.2	Guayule Branches	160
3.3.3	Branches of Different Sizes; Bark	162
3.3.4	Branches, Trunk, Roots	163
3.3.4.1	Extraction Options	164
4	Conclusions	164
	Appendix A ^{13}C -NMR Method	165
	References	167

Nuclear Magnetic Resonance and Pollen Quality

C. KERHOAS and C. DUMAS (With 13 Figures)

1	What is the Pollen Grain?	169
1.1	Organization and Role	169
1.2	Water Content, Membrane Organization and Pollen Viability	171

2	¹ H-NMR – Water Content	176
2.1	Method	176
2.2	General	177
2.3	Water Content Evolution	178
2.4	Water State Evolution	179
2.4.1	Relaxation Time	179
2.4.2	Hydric Compartmentation	180
2.5	Dehydration Control and Cryptobiotic Organisms	182
3	³¹ P, ¹³ C-NMR and Membrane State	183
3.1	Structural Polymorphism	183
3.2	Functional Aspects of Membrane Polymorphism	185
3.2.1	Hexagonal Configuration: H _{II}	185
3.2.2	Vesicular, Micellar or Inverted Micellar Configuration	186
3.2.3	Application to Water Stress	186
3.3	¹³ C-NMR and Membrane State	186
4	Conclusions	187
	References	187
