1	PREFACE	1
2	MATHEMATICAL MODELLING	4
2.1	Introduction	7
2.2	Infinitesimal Theory of Plasticity	7
2.2.1	Yield Criteria	8
2.2.2	Work Hardening	12
2.2.3	Plastic Deformation	14
2.3	Problem Solution	18
2.3.1	System Approach	21
2.3.2	Detailed Mechanics Approach	26
2.4	Elementary Analysis or "Slab Method"	29
2.4.1	The General Case	31
2.4.2	The Plane Strain Situation	32
2.4.2.1	Frictionless Strip Drawing	32
2.4.2.2	Lateral Flow between Parallel Dies	34
2.4.2.3	Plane Strain Lateral Flow between Inclined Dies	36
2.4.2.4	Flow into a Rib	42
2.4.3	The Axisymmetric Situation	43
2.4.3.1	Stress Distribution for the Flat Axisymmetric Case	43
2.4.3.2	Stress Distribution for Converging Outward Flow	46
2.5	Upper-Bound Method	50
2.6	Finite Element Analysis	56
2.6.1	Introduction and Historical Perspective	56
2.6.2	Finite Element Background	58

2.6.3	Stress-Strain Formulations	67
2.6.3.1	Elastic-Plastic Formulations	69
2.6.3.2	Rigid-Plastic Formulations	75
2.6.4	Thermal Formulations	79
2.6.5	Finite Element Equations	82
2.6.5.1	Velocity Equations	84
2.6.5.2	Temperature Equations	86
2.6.5.3	Time Dimension	87
2.6.6	Forming Specifics	89
2.6.7	Summary and Future Developments	98
	References Chapter 2	102
3	PHYSICAL MODELLING	109
3.1	Similarity Theory	109
3.1.1	Basic Principles	109
3.1.2	Similarity Laws in Metal Forming	111
3.2	Application and Basic Techniques	114
3.3	Material Flow in Forging - Examples	120
3.4	Simulation of Material Deformation in Turbine Blade Forging	129
3.5	Conclusions	135
	References Chapter 3	136
4	MODELLING OF FORGING	141
4.1	Introduction	142
4.2	System Modelling in Hot Die Upsetting	142
4.2.1	Heat Transfer Analysis	145
4.2.2	Non-Dimensional Analysis	154
4.2.3	Hot-Die Upsetting System Modelling	164

4.2.3.1	Temperature Calculation	164
4.2.3.2	Stress and Strain Calculation	169
4.2.3.3	Determination of the Shearing Zone in Closed Die Forging	172
4.2.3.4	Stresses	174
4.2.3.5	Flash Width Calculation	175
4.2.3.6	Force Calculations	177
4.2.3.7	Description of the Computer Program	177
4.2.3.8	Experimental Verification of the System Modelling	180
4.2.4	Optimization of Process Parameters	182
4.2.4.1	Geometrical Parameters	182
4.2.4.2	Maximum Allowable Die Stress	183
4.2.4.3	Influence of Thermal Barrier Thickness	186
4.2.4.4	Optimum Conditions for Forging NIM 80 A Billets	187
4.2.4.5	Isolines of Maximum Deformation	189
4.2.4.6	Evaluation of Optimum Variable Ram Speed	190
4.2.5	Coupled FEM Analysis of Forging	193
4.2.5.1	Introduction	193
4.2.5.2	Principle of Induction Heating	194
4.2.5.3	Influence of an Inhomogeneous Temperature Distribution on the Forging Process	196
4.2.5.4	Process Model and Boundary Conditions	196
4.2.5.5	Calculations, Experiments and Results	199
4.2.5.6	Local Strain and Temperature Distribution	201
4.2.5.7	Future Applications of Coupled FEM Process Models	202
4.3	Plane Strain Modelling of Closed Die Forging	204
4.3.1	Elementary Analysis Approach	204
4.3.2	CAD/CAM and Process Modelling of Closed Die Forging	208

4.3.2.1	The DIEDESIGN Software	210
4.3.2.2	Geometrical Input Data Description	216
4.3.2.3	Process Modelling of the Forging Process	216
4.3.2.4	Forging Loads Minimization and Flash Positioning	217
4.3.2.5	Preform and Flash Definition	223
4.3.2.6	Center of Loading	227
4.3.3	Application of CAD/CAM to Forge a Blade in a Nickel-Base Alloy	230
4.3.4	FEM Plane Strain Analysis of Blade Forging	233
4.3.4.1	Deformations	234
4.3.4.2	Effective Strains and Strain Rates	235
4.3.4.3	Stresses	239
4.3.4.4	Friction	240
4.4	Plan Strain Modelling of Thin Rib Forging	243
4.4.1	Elementary Analysis Approach	243
4.4.1.1	Forging Stress Distribution	244
4.4.1.2	Plate-Rib Forging Model	250
4.4.1.3	Rib Forging Model	252
4.4.1.4	Rib Forging Model with the Effect of the Radius	253
4.4.1.5	Experiments and Results	256
4.4.1.6	Conclusions	260
4.4.2	FEM Plane Strain Analysis of Thin Rib Forging	261
4.4.2.1	The FEM Model for the Rib Forging	262
4.4.2.2	Metal Deformation	262
4.4.2.3	Strain Distribution	265
4.4.2.4	Forging Pressure	265
4.4.3	Stress and Strain Analysis of Forging Dies	268

4.4.3.1	The Finite Element Model	269
4.4.3.2	Deformations at the Nodal Points	273
4.4.3.3	Stress Distribution	274
4.5	Finite Element Analysis of a Complex Axisymmetric Shape	277
4.5.1	Deformations	277
4.5.2	Strains	279
4.5.3	Die Stress	283
References Chapter 4		286
5	MODELLING OF ROLLING	289
5.1	Introduction	291
5.2	Measurements of Lateral Spread	292
5.3	Computer-Aided Roll Pass Design	296
5.3.1	Input of the Geometry of the Profile	296
5.3.2	Modifications to the Profile	296
5.3.3	Calculation and Modification of the Neutral Line	299
5.3.4	Determination of the Starting Profile (Preform)	299
5.3.5	Roll Forming Parameters Calculations	301
5.3.6	Roll Pass Schedule and Roll Geometry	303
5.4	Results	309
5.5	CAD/CAM in Steel Profile Production	310
5.5.1	CAD of Shape Rolls	310
5.5.2	CAM of Shape Rolls at the CAD Workstation	311
References Chapter 5		315
6	MODELLING OF DRAWING	317
6.1	Introduction	318

6.2	Upper-Bound Analysis of Round-To-Square Drawing	318
6.2.1	The Upper-Bound Solution	318
6.2.2	The Geometrical Model	320
6.2.3	The Velocity Fields	322
6.2.4	Reduction of Area	323
6.2.5	Flow Lines	325
6.2.6	Optimization of the Theoretical Flow Field	327
6.2.7	Analysis of Process Parameters	330
6.2.8	Conclusions	335
6.3	Finite Element Analysis of Bar Drawing	337
6.3.1	The Finite Element Approach	337
6.3.2	Finite Element Formulation	338
6.3.3	Optimization	342
6.3.4	Finite Element Model	343
6.3.5	Restraints, Die Boundaries and Initial Conditions	344
6.3.6	Finite Element Results	346
6.3.7	Conclusions	347
	References Chapter 6	349
7	MODELLING OF THERMOMECHANICAL TREATMENT	351
7.1	Introduction	352
7.2	Determination of Heat Transfer Coefficients in Quenching	354
7.2.1	Approach to the Determination of the Heat Transfer Coefficient	355
7.2.2	Experimental Setup	356
7.2.3	Results	358
7.3	Quenching of Steel Plate through Water Flushing	366
7.3.1	Introduction	366
7.3.2	Analysis of the Heat Transfer	369

7.3.3	Influence of Scale Formation on the Heat Transfer	373
7.3.4	Experimental Technique	374
7.3.5	Material Properties	375
7.3.6	Experimental Results	375
7.4	Modelling of Quenching of Complex Parts	379
7.4.1	Introduction	379
7.4.2	Quenching of an Aluminum Impeller	380
7.4.3	Simulation	386
7.4.3.1	Temperature Calculations	387
7.4.3.2	Residual Stress and Distortion Calculations	392
7.4.4	Comparison with Experiments	396
7.4.5	Conclusions	400
7.5	Modelling of Heat Treatment of Large Forgings	401
	References Chapter 7	407
8	OUTLOOK	409
