

Table of Contents

1 Introduction to the Structure and the Programming of a Microprocessor	1
1.1 Representation of Information	2
1.1.1 Information Units	2
1.1.2 Number Representation	3
1.1.3 Symbol Representation	5
1.1.4 Hexadecimal and Octal Representation	5
1.2 Introduction to the Hardware Structure	7
1.2.1 Hardware Components of a Microprocessor System	7
1.2.2 Basic System Structure	8
1.2.3 The Microprocessor	10
1.2.4 The Memory	16
1.2.5 I/O Unit	18
1.3 Introduction to Assembly Language Programming	19
1.3.1 Program Representation	19
1.3.2 Program Translation (Assembling)	23
1.3.3 Program Input and Text Output	29
2 The 16-Bit Microprocessor	30
2.1 Microprocessor Structure	31
2.1.1 Programming Model	31
2.1.2 Data Types, Data Formats and Data Access	35
2.1.3 Extended Address Space	38
2.1.4 Instruction Formats and Addressing Modes	39
2.2 Instruction Set	44
2.2.1 Data Transfer Instructions	45
2.2.2 Arithmetic Instructions	49
2.2.3 Logic Instructions	51
2.2.4 Bit Processing Instructions	52
2.2.5 Shift and Rotate Instructions	53
2.2.6 Jump Instructions	54
2.2.7 String Instructions	57
2.2.8 System Instructions	58
2.3 Exception Processing	59
2.3.1 Trap and Interrupt Management	59
2.3.2 System and User Mode	64
3 Programming Techniques	66
3.1 Assembler Programming	66
3.1.1 Flow Charts	66
3.1.2 Assembly Language	68
3.1.3 Pseudo-ops	71

3.1.4	Absolute and Relocatable Program Blocks	75
3.1.5	Structured Assembler Programming	77
3.1.6	Macroinstructions and Conditional Assembling	78
3.2	Program Flow Control	81
3.2.1	Unconditional Jump	81
3.2.2	Conditional Jump and Simple Branch	82
3.2.3	Multiple-Way Branch	87
3.2.4	Program Loops	91
3.3	Subprogram Techniques	94
3.3.1	Subprogram Call and Return	95
3.3.2	Parameter Passing	96
3.3.3	Global Program and Data Accesses	101
3.3.4	Nested Subprograms	103
4	System Structure	106
4.1	System Structure	106
4.1.1	Single-Chip and Single-Card Systems	107
4.1.2	Bus Oriented Multiple-Card Systems	107
4.1.3	System Bus	107
4.1.4	Microprocessor Signals	109
4.2	Addressing of System Components	112
4.2.1	Isolated and Memory-Mapped Addressing	112
4.2.2	Card Selection and Component Selection	113
4.2.3	Word/Byte Selection	116
4.2.4	Memory Management	117
4.2.5	Memory Management Units	118
4.3	Data Transfer	122
4.3.1	Bus Coupling	123
4.3.2	Data Transfer Control	124
4.4	Interrupt Systems	126
4.4.1	Interrupt Priority and Interrupt Cycle	127
4.4.2	Allocation of Interrupt Levels	130
4.4.3	System Control Signals	134
4.5	Bus Allocation	135
4.5.1	Local Bus Allocation	135
4.5.2	Global Bus Allocation	137
5	Input/Output Organization	139
5.1	Input/Output Control with the Microprocessor	140
5.1.1	Synchronization with Busy Waiting	141
5.1.2	Synchronization with Program Interruption	142
5.1.3	Synchronization with Handshaking	142
5.1.4	Simultaneous Handling of Several Input/Output Activities	144
5.2	Data Transmission Systems and Remote Data Transmission	146

5.2.1	Data Transfer Techniques	147
5.2.2	Remote Data Transmission	148
5.2.3	Data Checking	151
5.3	Parallel Data Transmission	153
5.3.1	Data Formats	153
5.3.2	Parallel Interface Module	154
5.4	Asynchronous Serial Data Transmission	159
5.4.1	Communications Protocol	160
5.4.2	Data Formats	160
5.4.3	Bit and Character Synchronization	161
5.4.4	Asynchronous Serial Interface Module	161
5.5	Synchronous Serial Data Transmission	167
5.5.1	Bit Synchronization and Character Synchronization	168
5.5.2	Communications Protocols	168
5.5.3	Protocol Layers	172
5.5.4	Synchronous Serial Interface Module	173
6	Input/Output Controllers and Input/Output Computers	176
6.1	Input/Output with Direct Memory Access	176
6.1.1	Types of Accesses	177
6.1.2	DMA Controller Module	177
6.2	Input/Output Computers	184
6.2.1	Multicomputer System with Input/Output Computer	184
6.2.2	Structure of the Input/Output Computer	186
6.3	Controller Modules for Special Functions	189
6.3.1	Floppy Disk	190
6.3.2	Floppy Disk Controller Module	191
6.3.3	Video Terminals	194
6.3.4	CRT Controller Modules	197
7	16-Bit Microprocessors by Motorola, Zilog and Intel	199
7.1	Motorola MC 68000	199
7.1.1	The Programming Model	199
7.1.2	Data Formats	201
7.1.3	Addressing Modes	201
7.1.4	Instruction Formats and Instruction Set	201
7.1.5	Trap and Interrupt System	205
7.1.6	Processor Signals	207
7.1.7	Successors of the MC 68000	208
7.2	Zilog Z8000	210
7.2.1	The Programming Model	210
7.2.2	Data Formats	212
7.2.3	Addressing Modes	212
7.2.4	Instruction Formats and Instruction Set	213

7.2.5	Trap and Interrupt System	217
7.2.6	Processor Signals	218
7.2.7	Successors of the Z8001 and Z8002	219
7.3	Intel 8086	220
7.3.1	The Programming Model	221
7.3.2	Data Formats	222
7.3.3	Addressing Modes	222
7.3.4	Instruction Formats and Instruction Sets	223
7.3.5	Trap and Interrupt System	226
7.3.6	Processor Signals	227
7.3.7	Successors of the 8086	229
	Bibliography	231
	Index	234
