Chapter 1

Kinematic Equations 1

1.1. Introduction 1

1.2. Definitions 1

1.3. Manipulator hand position 8

1.3.1. Rodrigues formula approach 8

1.3.2. Homogeneous transformations 20

1.3.3. Spherical coordinates 25

1.3.4. Cylindrical coordinates 27

1.4. Manipulator hand orientation 28

1.4.1. Euler angles 28

1.4.2. Euler parameters 31

1.5. Manipulator hand velocities 33

1.5.1. Recursive and nonrecursive relations for linear and angular velocities 34

1.5.2. The Jacobian matrices 38

1.6. Summary 52

Chapter 2

Computer-aided Generation of Kinematic Equations in Symbolic Form 53

2.1. Introduction 53

2.2. Symbolic kinematic equations 56

2.2.1. Backward and forward recursive relations 56

2.2.2. Kinematic equations for the UMS-3B manipulator 59

2.2.3. Backward recursive symbolic relations 66

2.2.4. Forward recursive symbolic relations 74

2.2.5. Treatment of revolute joints with parallel joints axes 77

2.3. The Jacobian matrix with respect to the hand coordinate frame 85

2.3.1. The Jacobian for the UMS-3B manipulator 87

2.3.2. Recursive symbolic relations for the Jacobian with respect to the hand coordinate frame	91
2.3.3. The Jacobian columns corresponding to parallel joints	96
2.4. The Jacobian matrix with respect to the base coordinate frame	99
2.4.1. The Jacobian for the UMS-3B manipulator	100
2.4.2. Recursive symbolic relations for the Jacobian with respect to the base coordinate frame	103
2.4.3. The Jacobian columns corresponding to parallel joints	104
2.5. Program implementation, numerical aspects and examples ...	107
2.5.1. Block-diagram of the program for the symbolic model generation	107
2.5.2. Examples	110
2.5.3. Numerical aspects	114
2.6. Summary	116
Appendix I Direct Kinematic Problem for the Arthropoid Manipulator	118
Appendix II The Jacobian with Respect to the Hand Coordinate Frame for the Arthropoid Manipulator	130
Appendix III The Jacobian with Respect to the Base Coordinate Frame for the Arthropoid Manipulator	134
Chapter 3	
Inverse Kinematic Problem	138
3.1. Introduction	138
3.2. Analytical solutions	139
3.3. Numerical solutions	147
3.4. Summary	155
Chapter 4	
Kinematic Approach to Motion Generation	156
4.1. Introduction	156
4.2. Manipulation task	157
4.3. Trajectory planning	158
4.4. Motion between positions	159
4.4.1. Joint-interpolated motion	161
4.4.2. External coordinates motion	169
4.5. Procedurally defined motion	170
4.6. Summary	171

Chapter 5

Dynamic Approach to Motion Generation	172
5.1. Introduction	172
5.2. Manipulation system dynamic model	173
5.3. An overview of methods for dynamic motion synthesis	180
5.4. Determination of the energy optimal velocity distribution using dynamic programming	191
5.5. Quasioptimal nominal trajectory synthesis using decentralized system model	207
5.6. Summary	213

Chapter 6

Motion Generation for Redundant Manipulators	214
6.1. Introduction	214
6.2. Kinematic methods for redundant manipulator motion generation	216
6.3. Energy optimal motion synthesis	225
6.4. Obstacle avoidance using redundant manipulators	237
6.5. An algorithm for redundant manipulator motion synthesis in the presence of obstacles	249
6.6. Summary	258
References	258
Subject Index	265
