

# Contents

<b>1. Controlled Fusion and Numerical Simulation</b>	<b>1</b>
1.1 Controlled Fusion	1
1.1.1 The Lawson Criterion	1
1.1.2 Magnetic and Inertial Confinement of Plasma	4
1.1.3 The Role of Numerical Simulation in Fusion Research	5
1.2 Tokamaks	7
1.2.1 Design and Principle of Operation	7
1.2.2 The Current Status of Tokamak Research	9
1.2.3 Mathematical Models of Plasma in Tokamak Devices	14
1.3 Motion of Charged Particles in Tokamaks	17
1.3.1 Drift Equation of Motion	17
1.3.2 Tokamak Magnetic Field with a Circular Cross Section	19
1.3.3 The Motion of Charged Particles in the Tokamak Magnetic Field	21
<b>2. Simulation of Kinetic Processes Involving Coulomb Interaction</b>	<b>29</b>
2.1 Operator of Coulomb Collisions	29
2.1.1 Coulomb Collision Operator	29
2.1.2 Properties of Coulomb Operator	33
2.1.3 Coulomb Collision Operator for Axisymmetric Velocity Distributions	38
2.1.4 Coulomb Collision Operator for Isotropic Velocity Distribution of $\beta$ Particles	39
2.2 Cauchy Problem. Characteristic Relaxation Times	43
2.2.1 Cauchy Problem	43
2.2.2 Collisions Between Particles of the Same Species. The Simplest Relaxation Time	45
2.2.3 Relaxation of Relative Motion of Electrons and Ions	46
2.2.4 Energy Exchange and Temperature Equalization in Nonisothermal Plasma	49
2.2.5 Qualitative Description of the Behavior of the Cauchy Problem Solution for Two-Component Plasma	50
2.3 Linear Problem on the Interaction Between Fast Ions and Maxwellian Plasma	52
2.3.1 Mathematical Formulation	52
2.3.2 Isotropic Problem	55

2.3.3	Two-Dimensional Problem	58
2.3.4	Difference Scheme for the Solution of a Linear Kinetic Equation	63
2.4	Electric Field Effects	67
2.4.1	Critical Electric Field	67
2.4.2	Runaway Electrons	69
2.4.3	Effective Electric Field Acting on Ions	72
2.4.4	Interaction of Fast Ions with Plasma in the Presence of an Electric Field	75
2.5	The Problem of RF Current Drive in Plasma	79
2.5.1	Kinetic Equation for Electrons	79
2.5.2	Current Drive by Lower Hybrid Waves	81
2.5.3	Current Drive by Electron Cyclotron Waves	86
2.5.4	The Role of Trapped Electrons in Current Drive by Electron Cyclotron Waves	91
2.6	Nonlinear Kinetic Models	93
2.6.1	Nonlinear Problems and Numerical Methods	93
2.6.2	Energy Balance in Thermonuclear Plasma with High-Intensity Injection of Deuterium and Tritium	95
<b>3.</b>	<b>Simulation of MHD Processes</b>	<b>98</b>
3.1	Basic Systems of Equations	98
3.1.1	Transport Equations	98
3.1.2	Two-Fluid Hydrodynamics	99
3.1.3	One-Fluid Hydrodynamics	100
3.1.4	The Strong Longitudinal Magnetic Field Approximation (Tokamak Approximation)	104
	a) Reduced Equations for High- $\beta$ Plasma	107
	b) Reduced Equations for Low- $\beta$ Plasma	111
3.2	Equilibrium	112
3.2.1	Equilibrium Equations for Tokamaks	112
3.2.2	Equilibrium in the Presence of an Iron Core	116
3.2.3	Equilibrium Equation for a Cylinder	118
3.2.4	Helical Equilibria	119
3.2.5	Some Mathematical Properties of the Equilibrium Problem	120
3.2.6	Equilibrium of a Thin Plasma Column with Circular Cross Section	121
3.2.7	Numerical Solution of Equilibrium Problems	127
3.2.8	Evolution of Equilibrium	134
3.3	Stability	136
3.3.1	Introductory Remarks	136
3.3.2	Basic Equations	137
3.3.3	Circular Cylindrical Column	141
	a) External Helical Mode ( $r_s > a$ )	146
	b) Internal Modes ( $r_s < a$ )	149

c) Dissipative Modes ( $\sigma \neq \infty$ )	151
d) Effect of Toroidicity on the Helical Mode Stability ( $R/a \neq \infty$ )	156
e) Local Stability Criteria ( $m \gg 1, n \gg 1$ )	158
3.3.4 Numerical Solution of Stability Problems	159
a) Time Evolution of Solutions of System (3.3.1)	160
b) Investigation of the Potential Energy Sign	164
c) Minimization of Functional (3.3.13) to Obtain the Natural Frequency Spectrum	165
d) Examples	166
3.4 Nonlinear Problems	167
3.4.1 Nonlinear Evolution of External Modes	168
3.4.2 Evolution of the Internal Mode $m/n=1/1$ and Reconnection of Magnetic Surfaces	172
3.4.3 Nonlinear Evolution of Modes $m \geq 2$ and Growth of Islands	175
3.4.4 Helical Modes with Two Resonant Surfaces ("Double Tearing Modes")	178
3.4.5 Interaction Between Helical Modes	179
<b>4. Transport Models</b>	183
4.1 Physical Grounds of Transport Models	183
4.1.1 Basic Equations	183
4.1.2 Neoclassical Fluxes of Particles and Energy	185
4.2 Development of the Transport Model	189
4.2.1 Model of Classical Energy Balance	189
4.2.2 Anomalous Thermal Conductivity of Electrons	190
4.2.3 Particle Flux	194
4.2.4 Model for Neutrals	200
4.2.5 The Effect of Magnetic Field Rippling	208
4.2.6 Compression of Plasma by a Magnetic Field	216
a) Compression Along the Minor Radius	216
b) Compression Along the Major Radius	217
4.3 Impurities	219
4.3.1 Influx of Impurities into Plasma	219
4.3.2 Basic System of Equations	220
4.3.3 Atomic Processes	221
4.3.4 Particle Fluxes	224
4.3.5 Approximate Solutions of System (4.3.1)	226
4.3.6 Comparison with Experiments	228
4.3.7 Radiation of Impurities in Energy Balance Models	230
4.4 Numerical Solution of Systems (4.1.1, 3.1)	232
4.4.1 Linear Implicit Scheme	232
4.4.2 Nonlinear Implicit Scheme	234
4.4.3 Gear's General Methods for Stiff Systems	236
4.5 Appendix	239

<b>5. Hybrid Models</b>	241
5.1 Models of Plasma Heating by High-Energy Neutral Injection	241
5.1.1 Ionization and Capture of Energetic Neutrals	241
a) Narrow-Beam Model	242
b) Wide-Beam Model	247
5.1.2 Simple Model of Energy Balance with Neutral Injection	249
5.1.3 Hybrid Model of Energy Balance with Neutral Injection	250
5.1.4 Effect of Multiple Charge Exchange on Energy Transfer from Fast Ions to Bulk Plasma Particles	252
5.2 Effect of MHD Mixing on Energy and Particle Balance	258
5.2.1 Experimental Data on Mixing	258
5.2.2 Structure of the Hybrid Model	259
5.2.3 The Kadomtsev Model of Internal Mixing for Tearing Mode $m/n=1/1$	260
5.2.4 Mixing for Nonmonotonic Current Profile	266
5.2.5 Electric Field in Mixing	271
5.2.6 Properties of the Hybrid Model and Its Application to the Experiment Description	274
5.3 Kinetic Convective Transport of Ions in Longitudinal Magnetic Field Ripples	277
5.3.1 Diffusive and Convective Transport	277
5.3.2 Basic Equations	278
5.3.3 Solution of Systems (5.3.5–10) and (5.3.18–21)	282
5.3.4 Numerical Solution of Systems (5.3.5–10), (5.3.28–32)	284
