

Contents

Prolog	1
Chapter 1 A Constructivist Manifesto	4
1. The Descriptive Basis of Mathematics	4
2. The Idealistic Component of Mathematics	6
3. The Constructivization of Mathematics	9
Notes	13
Chapter 2 Calculus and the Real Numbers	14
1. Sets and Functions	14
2. The Real Number System	18
3. Sequences and Series of Real Numbers	28
4. Continuous Functions	35
5. Differentiation	44
6. Integration	50
7. Certain Important Functions	55
Problems	62
Notes	64
Chapter 3 Set Theory	67
1. Some Basic Notions of the Theory of Sets	67
2. Complemented Sets	72
3. Neighborhood Spaces and Function Spaces	75
Problems	78
Notes	79
Chapter 4 Metric Spaces	81
1. Fundamental Definitions and Constructions	81
2. Associated Structures	87
3. Completeness	89
4. Total Boundedness and Compactness	94

5. Spaces of Functions	100
6. Locally Compact Spaces	109
Problems	121
Notes	125
Chapter 5 Complex Analysis	128
1. The Complex Plane	128
2. Derivatives	130
3. Integration	134
4. The Winding Number	142
5. Estimates of Size, and the Location of Zeros	152
6. Singularities and Picard's Theorem	163
7. The Riemann Mapping Theorem	180
Problems	210
Notes	213
Chapter 6 Integration	215
1. Integration Spaces	216
2. Complete Extension of an Integral	222
3. Integrable Sets	232
4. Profiles	236
5. Positive Measures on $\mathbb{R}$	245
6. Approximation by Compact Sets	252
7. Measurable Functions	259
8. Convergence of Functions and Integrals	265
9. Product Integrals	277
10. Measure Spaces	282
Problems	292
Notes	297
Chapter 7 Normed Linear Spaces	299
1. Definitions and Examples	299
2. Finite-Dimensional Spaces	306
3. The L_p Spaces and the Radon-Nikodym Theorem	313
4. The Extension of Linear Functionals	334
5. Quasinormed Linear Spaces; the Space L_∞	342
6. Dual Spaces	350
7. Extreme Points	357
8. Hilbert Space and the Spectral Theorem	363
Problems	390
Notes	396

Chapter 8 Locally Compact Abelian Groups 399

1. Haar Measure 399

2. Convolution Operators 419

3. The Character Group 424

4. Duality and the Fourier Transform 434

 Problems 447

 Notes 449

Chapter 9 Commutative Banach Algebras 450

1. Definitions and Examples 450

2. Linear Equations in a Banach Algebra 453

 Problems 461

 Notes 462

References 463

Symbols 467
