PREFACE	iii
-------------------	-----

PART ONE

WEIGHTED ENERGY METHODS IN FLUID DYNAMICS

Chapter

I.	INTRODUCTORY TOPICS ON STABILITY OF VISCOUS FLOWS	1*
1.1	Statement of the Stability Problem	1
1.2	The Linear Stability Method	3
1.3	Energy Methods for Nonlinear Stability in Bounded Domains	7
	References to Chapter I	13
II.	ENERGY METHODS IN UNBOUNDED DOMAINS: THE CASE OF A HALF SPACE	14
2.1	Preliminary Considerations	14
2.2	Weighted Poincaré Inequality	15
2.3	The Energy Relations in a Half Space	17
2.4	Universal Stability	20
2.5	Asymptotic Stability	24
2.6	Variational Formulation	29
2.7	Applications	32
	References to Chapter II	35
III.	ENERGY METHODS IN UNBOUNDED DOMAINS: THE CASE OF AN EXTERIOR DOMAIN.	36
3.1	Weighted Poincaré Inequalities	36
3.2	The Energy Relations	39
3.3	Universal Stability	40
3.4	Asymptotic Stability	41
3.5	Variational Methods	45
3.6	On the Applicability of the Stability Criteria	48
	References to Chapter III	48

IV.	SOME PROPERTIES OF STEADY SOLUTIONS IN EXTERIOR DOMAINS	49
4.1	Preliminaries	49
4.2	D-solutions and Their Properties	49
4.3	Further Properties of D-solutions for Arbitrary Reynolds Numbers	51
	References to Chapter IV	54
V.	EXCHANGE OF STABILITIES, SYMMETRY AND THE CONNECTION BETWEEN LINEAR AND NONLINEAR STABILITY	55
5.1	Symmetry, Linear and Nonlinear Stability	55
5.2	Applications of Theorem 5.3	59
5.3	Nonsymmetric Operators and Stability	63
5.4	Stability of Couette Flow Between Coaxial Cylinders Within the Mean Radius Approximation in the Narrow Gap Limit	68
5.5	Energy Stability in Bio-convection	71
5.6	Nonlinear Stability of a Diffusion Equation	73
	References to Chapter V	77
VI.	SKEW-SYMMETRIC OPERATORS AND NONLINEAR STABILIZATION: THE HYDROMAGNETIC BÉNARD PROBLEM	78
6.1	Skew-symmetric Operators and Stabilization	78
6.2	Statement of the Problem	79
6.3	Generalized Energy Theory for the Linearized Problem	81
6.4	Stability of the Nonlinear Problem	87
	References to Chapter VI	91

PART TWO

WEIGHTED ENERGY METHODS IN ELASTICITY

VII.	WEIGHTED ENERGY METHODS IN ELASTOSTATICS ON UNBOUNDED DOMAINS	92
7.1	Uniqueness in Linear Elastostatics: Statement of the Problem . .	92
7.2	Uniqueness and Continuous Dependence in Linear Elastostatics . . .	95
7.3	A Saint-Venant Principle for the Semi-infinite Elastic Cylinder: Preliminaries	98

7.4.	Asymptotic Behavior in the Nonlinear Elastic Beam	102
	References to Chapter VII	107
VIII.	WEIGHTED ENERGY METHODS IN LINEAR ELASTODYNAMICS IN UNBOUNDED DOMAINS	108
8.1.	Uniqueness and Continuous Dependence in Linear Electrodynamics with Definiteness Assumptions on the Elasticities	108
8.2.	Continuous Data Dependence without Definiteness Conditions on the Elasticities	112
	References to Chapter VIII	119
