

Contents

Chapter 1. Normal Bone	1
Structure of bones	1
Histological types of bone	3
Cortical bone	4
Cancellous bone	6
Normal development of the skeleton	7
Growth plate	9
Reserve zone	10
Proliferation zone	10
Hypertrophic zone	11
Metaphysis	12
Ossification groove and perichondrial ring	12
Mineralisation of bone	13
Matrix vesicles	13
Bone collagen and its mineralisation	15
Origin of bone cells	18
Osteoblast	18
Osteoclast	19
Cells in bone	20
Osteoblasts	20
Osteocytes	23
Osteoclasts	26
Bone resorption	28
Control of bone cell function	30
References	30
 Chapter 2. Abnormal Development of the Skeletal System	 35
The chondrodysplasias	35
General considerations	35

Achondroplasia	38
Achondrogenesis	41
Thanatophoric dysplasia	41
Short-rib-polydactyly syndromes	42
Chondroectodermal dysplasia (Ellis-van Creveld syndrome)	43
Asphyxiating thoracic dysplasia (Jeune syndrome)	44
Stippled epiphyses and chondrodysplasia punctata	45
Other types of chondrodysplasia identifiable at birth	46
Hypochondroplasia	48
Metaphyseal dysplasias	48
Multiple epiphyseal dysplasias	48
Other types of chondrodysplasia not identifiable at birth	49
Ultrastructural studies	49
Osteogenesis imperfecta	50
Classification	50
Biochemical abnormalities	52
Histological appearances	52
Osteopetrosis	55
Osteopetrosis of autosomal dominant type	56
Osteopetrosis of autosomal recessive type	56
Macroscopic and histological appearances	57
Osteopetrosis in animals	60
Pycnodysostosis	61
Some other forms of abnormal skeletal development	62
Cleidocranial dysplasia (cleidocranial dysostosis)	62
Congenital dislocation of the hip	62
Slipped femoral capital epiphysis	63
References	63

Chapter 3. Inborn Biochemical Disorders of Metabolism 67

Introduction	67
The mucopolysaccharidoses	67
Hurler's syndrome	69
Hunter's syndrome	70
Maroteaux-Lamy syndrome	71
Morquio's syndrome	71
Histological appearances	71
The mucolipidoses	72
Mucopolipidosis I	73
Mucopolipidosis II	73
Mucopolipidosis III	74
Generalised gangliosidosis I	74
The sphingolipidoses	74
Gaucher's disease	74
Niemann-Pick disease	77

Hypophosphatasia	78
Oxalosis	80
References	84

Chapter 4. Quantitative Methods in Bone Biopsy Examination 87

Introduction	87
Bone biopsy	87
Laboratory processing of the biopsy	88
Staining methods	89
Basic principles of measurement	92
Point counting with an eyepiece graticule	92
Linear intercept method	94
Tetracycline labelling	94
Measurements made and terms used in bone morphometry	97
Normal values	98
Variation and reproducibility	101
Semi-automatic and automatic methods in bone quantitation	104
Comparison of methods used in bone quantitation	108
References	109

Chapter 5. Metabolic Bone Disease 113

Vitamin D metabolism	113
Parathyroid hormone	114
Primary hyperparathyroidism	115
Secondary and tertiary hyperparathyroidism	119
Hypoparathyroidism	120
Pseudohypoparathyroidism	120
Osteomalacia and rickets	121
Vitamin D deficiency	125
Malabsorption of vitamin D	126
Vitamin D deficiency, bone disease and gastrointestinal disorders	126
Impaired vitamin D metabolism in the liver and kidney	127
Vitamin D-dependent rickets	128
Phosphate depletion and hypophosphataemia	128
Familial hypophosphataemia	128
Other forms of hypophosphataemic bone disease	129
Inhibitors of mineralisation	129
Osteomalacia in metabolic acidosis	129
Hypophosphatasia	130
Renal osteodystrophy	132
Calcitonin	135
The bones and other hormones	136
Growth hormone and acromegaly	136
Thyroid hormone, hyperthyroidism and hypothyroidism	137

Adrenal cortical steroids and Cushing's syndrome	138
Diabetes mellitus	139
References	139

Chapter 6. Paget's Disease of Bone 147

Introduction	147
Clinical features	148
Fractures	150
Tumours	150
Cardiovascular effects	152
Biochemical changes	152
Radiological appearances	153
Morbid anatomy and histopathology	154
Aetiology	163
Ultrastructural studies	164
References	165

Chapter 7. Hyperostosis 169

Introduction	169
Ankylosing hyperostosis of the spine (diffuse idiopathic skeletal hyperostosis)	171
Hyperostosis frontalis interna	174
Melorheostosis	175
Osteopoikilosis	176
Other sclerosing disorders of bone	177
Osteopathia striata	177
Endosteal hyperostosis	177
Sclerosteosis	178
Infantile cortical hyperostosis	178
Fluorosis	179
Hypertrophic osteoarthropathy	180
References	181

Chapter 8. Osteoporosis and Bone Atrophy 183

Introduction	183
Clinical features	185
Involutional osteoporosis	187
Principal aetiological factors	188
Histomorphometry	191
Osteoporosis in the young	193
Immobilisation osteoporosis	194
Corticosteroid-induced osteopenia	195
Localised bone loss	196

Disappearing bone disease	197
References	197

Chapter 9. Necrosis and Healing in Bone 203

Introduction	203
Fractures and fracture healing	203
Factors affecting the healing of fractures	207
Failure of union	208
Pathological fractures	209
Stress or fatigue fractures	214
Bone grafts	215
Reactions of bone adjacent to joint prostheses and other implants	217
Pathological examination of bone related to implants	218
Reaction of osseous tissue adjacent to bone cement	218
Direct contact of bone with implant material	219
Wear debris and the implant bed	223
Necrosis of bone	223
Perthes disease (Legg–Calve–Perthes disease)	229
Effects of electrical stimulation on healing in bone	230
Endogenous electrical signals in bone	230
Bone response to exogenous electrical stimuli	231
References	231

Chapter 10. Infection of Bone 235

Introduction	235
Osteomyelitis in children	235
Adult osteomyelitis	236
Osteomyelitis in drug addicts	238
Osteomyelitis and haemoglobinopathy: salmonella infection	239
Osteomyelitis caused by direct spread of organisms	239
Radiological appearances of osteomyelitis	240
Pathology of osteomyelitis	240
Complications of osteomyelitis	244
Chronic bone abscess	245
Tuberculosis	245
Other organisms	248
Brucellosis	248
Leprosy	249
Treponemal infections	249
Syphilis	249
Yaws	251
Fungi and actinomycosis	251
Actinomycosis	251
Blastomycosis	252
Coccidioidomycosis	252

Cryptococcosis	253
Maduromycosis	253
Parasitic disease	253
Viral infections	254
References	254

Chapter 11. Bone Tumours and Tumour-like Conditions 257

Introduction	257
Classification of bone tumours	257
General approach to bone tumour pathology	258
Clinical features	259
Radiological features	261
Histopathological diagnosis	264
Particular types of bone tumour	265
Cartilaginous tumours	265
Osteochondroma (cartilage-capped exostosis)	265
Chondroma	267
Chondroblastoma	268
Chondromyxoid fibroma	270
Chondrosarcoma	270
Bone-forming tumours	274
Osteoid osteoma	274
Osteoblastoma	275
Osteosarcoma (general considerations)	276
Telangiectatic osteosarcoma	280
Osteosarcoma on the outside of the bone	280
Osteosarcoma in abnormal bone	285
Giant cell tumour	286
Malignant fibrous tumours	288
Round cell tumours	290
Ewing's sarcoma	291
Primary malignant lymphoma	293
References	293

Subject Index 297
