

Table of Contents

Table of Contents	v
List of Figures	vii
Abbreviations	ix
1. Introduction	1
2. Wireless data networks.....	5
2.1 Wireless cellular networks.....	5
2.1.1 UMTS/3G.....	5
2.1.2 LTE/4G.....	7
2.2 Wireless local area networks	9
2.3 Wireless metropolitan area networks	11
2.4 Mobile broadcast networks.....	13
3. Heterogeneous wireless networks	17
3.1 Heterogeneous wireless networks – a definition	17
3.2 Mobility management in homogeneous wireless networks.....	19
3.2.1 Mobility management in IEEE 802.11 networks	19
3.2.2 Mobility management in cellular wireless networks.....	20
3.3 Mobility management in heterogeneous all-IP networks	21
3.3.1 Mobile IPv6.....	23
3.3.2 IETF enhancements for Mobile IPv6	27
3.3.3 The need for an additional abstraction layer	28
3.4 Deployment scenarios for heterogeneous wireless networks	29
3.4.1 Deployment Scenario 1	30
3.4.2 Deployment Scenario 2	31
4. Interface abstraction layer functions as enablers for vertical handovers	33
4.1 Abstraction Layer Functions – a definition	33
4.2 The IEEE 802.21specification	34
4.2.1 Media Independent Handover Function (MIHF)	35
4.2.2 Media Independent Handover services	35
4.3 The vertical handover process with IEEE 802.21	37
4.3.1 Mobile Initiated Handovers (MIHO)	38
4.3.2 Network Initiated Handovers (NIHO).....	41
4.4 Limitations of the current IEEE 802.21 specification	44
4.4.1 Management of network resources: too static	44
4.4.2 Information transport mechanism: undefined	45
4.4.3 Vertical handover procedures: too rigid.....	45
4.5 Requirements for an optimized interface abstraction layer	46
4.5.1 Dynamic management of network resources	46
4.5.2 A fast and reliable information transport mechanism	48
4.5.3 A flexible handover procedure	49
5. Proposal of an enhanced interface abstraction layer function.....	53
5.1 New mechanisms for managing network resources	53
5.1.1 Advertisement of new (virtual) network resources	55
5.1.2 Advertisement and registration of new virtual identities	57
5.1.3 Modus operandi for the enhanced interface abstraction layer functions.....	58
5.2 The transport mechanisms for the mobility support information	59
5.2.1 Information transport mechanisms using layer-4 protocols.....	61
5.2.2 Information relay mechanisms using layer-2 frames	67
5.2.3 Information transport mechanisms for mobile broadcast systems	68

5.2.4	Proposed approach for relaying the mobility support information	70
5.3	New protocol operations for performing vertical handovers.....	70
5.3.1	Proposed protocol operations for optimizing mobile controlled handover procedures	71
5.3.2	Proposed protocol operations for performing hybrid terminal/network controlled handover procedures	75
5.3.3	Proposed protocol operations for performing vertical handovers involving mobile broadcast systems.....	76
6.	Analysis of the proposed solution	81
6.1	Evaluation methodology.....	81
6.1.1	Test-bed based evaluation	81
6.1.2	Simulation based evaluation.....	85
6.2	Dynamic management of network resources.....	90
6.2.1	Functional assessment	90
6.2.2	Evaluation and conclusion	91
6.3	Information transport mechanism for the mobility support information.....	91
6.3.1	Performance assessment.....	91
6.3.2	Evaluation and conclusion	95
6.4	Enhanced protocol operation for vertical handovers	98
6.4.1	Functional and performance assessments	98
6.4.2	Evaluation and conclusion	105
6.5	Analysis of the degree of fulfilment of requirements.....	106
7.	Conclusion.....	107
8.	References	109
9.	Deliverables to international research projects and standardization bodies.....	117
Annex A.	SCTP/IPv6 error report	119
Annex B.	Content of the attached CD-ROM.....	121
