

Contents

1. EXTREME VALUE THEORY

Presiding: Nancy R. Mann and R.E. Barlow

B. Epstein	Applications of Extreme Value Theory to Problems of Material Behavior.....	3
A.M. Hasofer	A Matrix-Valued Weibull Distribution.	11
E.H. Vanmarcke	Extreme Value Statistics Compatible with Random Field Theory.....	23
S.C. Saunders	Some Problems of Estimation for Mixed-Weibull Populations which Arise in Fatigue or Strength Models.....	31
T.L.S. Andersson	Extreme Value Theory in Endurance Testing of Ball and Roller Bearings..	41
G. Lindgren	The Use of Slepian Model Processes in Crossing and Extreme Value Theory....	53
O. Ditlevsen	Plastic Movements of Linear Elastic-Ideal Plastic Oscillator Subject to Gaussian Process Excitation.....	59
S. Krenk	Generalized Hermite Polynomials and the Spectrum of Nonlinear Random Vibration.....	71
J. Tiago de Oliveira	Weibull Distributions and Large Earthquake Modelling.....	81

2. FATIGUE CRACK GROWTH

Presiding: H. Liebowitz and T. Yokobori

F. Kozin	Analysis of Stochastic Equation	
J.L. Bogdanoff	Models of Crack Growth.....	93
Y.K. Lin	Stochastic Modeling of Fatigue Crack	
W.F. Wu	Propagation.....	103
J.N. Yang		
K. Sobczyk	Stochastic Modelling of Fatigue Crack Growth.....	111
B. Palmberg	Probabilistic Crack Propagation Using Cycle-by-Cycle Technique.....	121
D.G. Ford	Fatigue Life Distribution for Structures with Interacting Failures.....	135

G.I. Schuëller	A Consistent Reliability Concept Utilizing Fracture Mechanics.....	145
F.L. Nilsson	Fatigue Crack Propagation under Random Loading.....	157
Y. Kimura T. Kunio	Correlation between Micro Fracture Process and Fatigue Crack Propagation.....	165

3. PROBABILISTIC FAILURE MODELS

Presiding: J. Carlsson and A.O. Payne

V.V. Bolotin	Sets of Multiple Cracks in Solids with Application to the Fatigue Life and Reliability Prediction.....	177
T. Yokobori A.T. Yokobori, Jr. H. Awaji	Stochastic Approach to Statistical Aspects of Failure.....	199
H.-P. Lehrke	Fatigue Life and Reliability Esti- mation of Mineral-Oil Pipe Lines....	215
P. Stanley E.Y. Inanc	Assessment of Surface Strength and Bulk Strength of a Typical Brittle Material.....	231
R.A. Heller A. Schmidt R. Denninghoff	The "Weakest Link" Concept after Proof Testing.....	241
J. Margetson N.R. Cooper	Brittle Material Design Using Three Parameter Weibull Distributions.....	253
E. Simiu D.A. Reed	Ring-on-Ring Tests and the Modeling of Cladding Glass Strength by the Weibull Distribution.....	263
K. Handa	Probabilistic Analysis of Plastic Plates.....	271
P. Bjerager S. Gravesen	Lower Bound Reliability Analysis of Plastic Structures.....	281
R.L. Smith	Probabilistic Models for Composites: Are there Flaws in the Theory?.....	291
S.B. Batdorf	Failure Statistics of Unidirectional Long-Fiber Composites.....	299
H. Mihashi	Stochastic Approach to Study the Fracture and Fatigue of Concrete....	307
L. Sentler	The Statistical Theory of Brittle Fracture Applied on Concrete.....	319

4. PROBABILISTIC FRACTURE MECHANICS

Presiding: R.A. Heller and R. Talreja

R.F. Cameron	Calculating PWR Pressure Vessel Failure Frequencies.....	331
A. Brückner D. Munz	Probabilistic Assessment of Structures with Weld Defects.....	343
U. Schomburg T. Schmidt	Probability of Fracture in the Main Coolant Pipe of a Pressurized Water Reactor.....	355
A.S. Heller A.L. Love, Jr.	Statistical Modeling of Shift in the Reference Temperature of Pressure Vessel Welds.....	363

5. RELIABILITY ANALYSIS

Presiding: V.V. Bolotin and B. Bergman

R.E. Barlow	Combining Component and System Information in System Reliability Calculation.....	375
B. Natvig	Recent Developments in Multistate Reliability Theory.....	385
H.O. Madsen	Bayesian Fatigue Life Prediction....	395
R.H. Leicester	Closed Form Solutions for Cost Optimized Reliability.....	407
J.L. Bogdanoff F. Kozin	Dynamic Updating of Cumulative Damage Models for Reliability and Maintenance Based upon Service Information.....	415

6. STRUCTURAL RESPONSE TO RANDOM LOADS

Presiding: O. Buxbaum and O. Ditlevsen

Y.K. Wen A. H-S. Ang	Random Vibration of Inelastic Structures.....	427
M. Grigoriu	Response of Simple Oscillators to Student's t Excitations.....	437
R. Rackwitz	Multi-Failure Mode Systems under Time-Variant Loading.....	445
I. Elishakoff E. Lubliner	Random Vibration of a Structure via Classical and Nonclassical Theories.....	455

F. Casciati L. Faravelli	Reliability Assessment for Non-Linear Random Frames.....	469
H. Okamura H. Shibata S. Sakai	On Reliability and Strength of Structural Components against Seismic Excitation.....	479
M.P. Singh	Random Vibration and Response Spectrum Approaches in Seismic Structural Designs.....	489
B. Etkin J.S. Hansen	Effect of a Damper on the Wind- Induced Oscillations of a Tall Mast.....	499
B.Å. Åkesson T.L.E. Dahlberg	Reduction of Wind-Induced Random Vibrations by Use of an Optimal Dynamic Absorber.....	501
A. Vulpe V.F. Poterasu A. Carausu	Failure Probability and Parameter Estimation for Structures with Weibull-Distributed Strength.....	517

7. STRUCTURES: DESIGN PHILOSOPHY, CODES AND APPLICATIONS

Presiding: N.C. Lind and L. Östlund

A.O. Payne G.D. Mallinson A.D. Graham	Reliability Approach to Structural Safety and Safety Criteria.....	529
J.N. Yang S. Chen	Fatigue Reliability of Structural Components under Scheduled In- spection and Repair Maintenance.....	559
D. Yadav N.C. Nigam	Reliability Analysis of Landing Gear Fatigue Life.....	569
M. Tichy	The Importance Factor - A Set of Problems.....	579
C.J. Turkstra	Criteria for the Selection of Load Combination Factors.....	587
H. Nakayasu	Data Pooling Analysis Based on Fatigue Reliability Data-Base.....	597
