

CONTENTS

CHAPTER ONE: LOCAL SYSTEMS

\$1. Introduction.	1
\$2. Local systems.	2
\$3. Partial order.	5
\$4. Dual systems.	7
\$5. Filters.	10
\$6. Limits of interval functions.	12
\$7. Derivates and derivatives.	14
\$8. Convergent interval functions.	16
\$9. Topological limits.	18
\$10. Systems based on a closure operator.	19
\$11. Negligent limits.	21
\$12. Density systems.	22
\$13. Miscellaneous limits.	24
\$14. Path approach.	27
\$15. Intersection conditions.	31
\$16. S-covers.	35
\$17. Variation of a function.	38
\$18. The variational measure.	40
\$19. The increasing sets property.	41

CHAPTER TWO: CLUSTER SETS

\$20. Introduction.	44
\$21. S-cluster sets.	44
\$22. Elementary theorems for cluster sets.	47
\$23. S - derived set.	50
\$24. Weak continuity theorems.	53
\$25. Asymmetry theorems.	56
\$26. Young's Rome theorem.	60
\$27. Ambiguity theorems.	62
\$28. Essential asymmetry.	64
\$29. Density cluster sets.	67

CHAPTER THREE: CONTINUITY

\$30. Introduction.	70
\$31. S-continuity.	70
\$32. S-discontinuities.	73
\$33. Baire 1 functions.	74
\$34. Negligent continuity.	78
\$35. Continuity relations.	80

CHAPTER FOUR: VARIATION OF A FUNCTION

\$36. Introduction.	85
\$37. Elementary properties.	86
\$38. Variational estimates.	87
\$39. Finite variation.	90
\$40. σ -finite variation.	93
\$41. The Vitali theorem.	96
\$42. Derivates and variation.	98
\$43. Further measure estimates.	100
\$44. The Lebesgue-Denjoy-Lusin theorem.	103
\$45. Absolute continuity.	105
\$46. De la Vallée-Poussin decomposition theorem.	106
\$47. Singular functions.	108

CHAPTER FIVE: MONOTONICITY

\$48. Introduction.	115
\$49. Local monotonicity.	115
\$50. Generalized local monotonicity.	117
\$51. Relative monotonicity.	120
\$52. Further relative monotonicity theorems.	123
\$53. Relative monotonicity (cont.).	129
\$54. Global monotonicity theorems.	130
\$55. Applications.	133
\$56. The Goldowski-Tonelli theorem.	137

CHAPTER SIX: RELATIONS AMONG DERIVATES

\$57. Introduction.	138
\$58. Elementary relations.	139
\$59. Beppo Levi theorem.	143
\$60. Order relation for the negligent Dini derivates.	145
\$61. A further order relation.	146
\$62. Ward's theorems.	147
\$63. Zajíček's relations.	149
\$64. Theorem of W.H.Young.	151
\$65. The porosity relations.	155
\$66. Evans-Humke theorem.	158
\$67. Denjoy/Khintchine/Burkill/Haslam-Jones theorem.	160
\$68. Generalized Young-Evans-Humke theorem.	160
\$69. Relations with the approximate derivative.	162

CHAPTER SEVEN: THE DENJOY-YOUNG RELATIONS

\$70. The Denjoy-Young-Saks theorem.	166
\$71. Proof of the DYS theorem.	167
\$72. The approximate version.	170
\$73. σ -porous version.	176
\$74. The sharp version.	178
\$75. DYS for the negligent Dini derivatives.	179

APPENDIX: SET POROSITY

§A1. Introduction.	183
§A2. Basic definitions.	183
§A3. Elementary properties.	187
§A4. σ -porous sets.	189
§A5. Porosity lemmas.	191
§A6. Zahorski's porosity derivative.	194
§A7. ψ -porosity.	197
§A8. σ -(ψ)-porosity.	200
§A9. Porosity and Hausdorff measure.	202
§A10. A further porosity lemma.	203
§A11. Symmetric perfect sets.	205
