

# Contents

## **1 The Platelet**

<i>Ian J. Mackie and Christopher R. Neal</i> . . . . .	1
Introduction . . . . .	1
Morphology . . . . .	1
Platelet Function . . . . .	7
Biochemistry . . . . .	18
Platelet Coagulant Activity . . . . .	24

## **2 Endothelium and the Vessel Wall**

<i>R. Michael Pittilo</i> . . . . .	33
General Introduction . . . . .	33
General Structure of the Vessel Wall . . . . .	35
Vascular Endothelium . . . . .	40
Endothelial Permeability . . . . .	50
Synthetic and Metabolic Functions . . . . .	51
Endothelial Regeneration . . . . .	52
Endothelial Injury . . . . .	54

## **3 The Use of Cultured Endothelial Cells in the Study of Platelet–Vessel Wall Interactions**

<i>Helen A. Bull</i> . . . . .	61
Introduction . . . . .	61
The Culturing of Vascular Endothelial Cells . . . . .	62
Growth Factors . . . . .	66
Extracellular Matrix Proteins . . . . .	70
Arachidonic Acid Metabolism . . . . .	73
In Vitro Assessment of Platelet Interaction with the Vessel Wall . . . . .	77

Assessment of Cytotoxicity using Cultured Endothelial Cells . . . . .	77
The Effect of Nicotine on Endothelial Cells . . . . .	78
Conclusion . . . . .	81
 <b>4 Smoking and Platelet–Vessel Wall Interactions</b>	
<i>R. Michael Pittilo</i> . . . . .	87
Introduction . . . . .	87
The Effects of Cigarette Smoke, Carbon Monoxide and Nicotine on Endothelial Morphology and Platelet–Endothelial Cell Interactions . . . . .	88
Cigarette Smoking and Platelet Aggregation . . . . .	96
Cigarette Smoking and Endothelial Cell Prostacyclin Production . . . . .	97
Novel Methods for Studying the Effects of Cigarette Smoking on Endothelium and Platelets . . . . .	98
Conclusions . . . . .	98
 <b>5 Mesothelium as a Non-thrombogenic Surface</b>	
<i>Carol M. Blow</i> . . . . .	103
Embryology . . . . .	103
Morphology . . . . .	103
Function . . . . .	108
Mesothelium as an Endothelium Substitute . . . . .	109
 <b>6 Platelet–Endothelial Interactions in Renal Injury</b>	
<i>Guy H. Neild and Michael P. Gorge</i> . . . . .	121
PART I. Potential Role for Platelets in Mediating Renal Injury . . . . .	121
Introduction to Renal Injury . . . . .	121
Evidence for Platelet Involvement in Glomerular Injury in Man . . . . .	123
How Platelets may Contribute to Renal Injury . . . . .	127
Mechanisms of Platelet Activation . . . . .	129
Role of Platelets in Experimental Models of Renal Injury . . . . .	130
PART II. Disorders of Platelet Function in Different Renal Diseases . . . . .	136
Nephrotic Syndrome . . . . .	136
Acute Renal Failure . . . . .	138
Pre-eclampsia . . . . .	139
Uraemia . . . . .	140
Dialysis . . . . .	144

## **7 Haemolytic Uraemic Syndrome and Thrombotic Thrombocytopenic Purpura: A Review**

<i>Guy H. Neild</i> . . . . .	155
Introduction . . . . .	155
Aetiology . . . . .	156
Pathology . . . . .	156
Pathogenesis . . . . .	157
Haemostatic Changes in Haemolytic Uraemic Syndrome . . . .	160
Treatment . . . . .	161

## **8 Newer Pharmacological Agents**

<i>Anne Yardumian and Samuel J. Machin</i> . . . . .	167
Introduction . . . . .	167
Inhibition of Arachidonic Acid Pathway/Reduction of Synthesis of Thromboxane A <sub>2</sub> . . . . .	170
Thromboxane Receptor Blockade . . . . .	174
Inhibition of Calcium Fluxes . . . . .	175
Elevation of Intra-Platelet Cyclic AMP Levels . . . . .	176
Protection of Endogenous Prostacyclin Release . . . . .	179
Promotion of Endogenous Prostacyclin Release . . . . .	180
Supplementation of Endogenous Prostacyclin . . . . .	181
Other Agents . . . . .	185

<b>Subject Index</b> . . . . .	193
