

Preface
Contents

Introduction 1

Chapter I. Set theoretic foundations 10

- §1. Definitions and notations 10
- §2. The axioms of ZFC 12
- §3. Ordinal numbers 15
- §4. Transfinite induction and transfinite recursion 18
- §5. Cardinal numbers 22
- §6. Clubs and stationary sets 26

Chapter II. General criteria and their applications 33

- §1. Some basic definitions of graph theory 33
- §2. Critical sets and families 35
- §3. μ -tests 41
- §4. The μ -test criterion 46
- §5. The criterion of Aharoni, Nash-Williams and Shelah 61
- §6. The Duality Theorem and its applications 75
- §7. Proof of Aharoni's criterion 83

Chapter III. Structural properties of families 98

- §1. Hall families 100
- §2. Frames 105
- §3. Critical families 113
- §4. Inductive definitions of critical sets 119
- §5. Queues 126
- §6. Rank functions 132
- §7. Stable families 140
- §8. Margin functions and demand functions 147

Chapter IV. Miscellaneous theorems on marriages 158

§1. A special criterion 158

§2. Shelah families and Nash-Williams families 159

§3. A sufficient criterion of Milner and Shelah 166

§4. Cotransversals 173

Bibliography 175

Index of symbols 178

General index 181
