

Contents

Introduction	1
1. Clones	9
2. Topological Preliminaries	18
3. The satisfaction of identities in topological spaces	24
4. Universality of terms on topological spaces	39
5. First order properties of clones: formulas with unary variables	53
6. First order properties of clones: formulas involving n -ary variables (homotopy and homology)	61
7. The real number system, functional equations, and the ring of continuous functions on A	71
8. Characterization of finite simplicial complexes by first order sentences	79
9. Open problems	83
