Acknowledgements	V
Contents	VII
General introduction	IX

Chapter 1

Principles of computed tomography . . .	1
1.1 Introduction	1
1.2 The concept of CT	1
1.3 CT scanner generations	3
1.4 Image quality parameters	3
1.4.1 Spatial resolution	3
1.4.2 Partial volume averaging	11
1.4.3 Contrast resolution	12
1.4.4 Artifacts	13
1.4.5 Image display and photography . .	14
1.5 Conclusions	19
References	19

Chapter 2

Technique of high-resolution CT	25
2.1 Introduction	25
2.2 X-ray pencil beam geometry	25
2.2.1 Pencil beam width, divergence and attenuation distribution	26
2.2.2 Pencil beam height, divergence and penumbra radiation	27
2.3 Improvement of spatial resolution	29
2.3.1 Edge enhancement	29
2.3.2 Geometric enlargement	31
2.3.3 Scanner generation dependency of X-ray geometry	33
2.3.4 MacroView reconstruction	36
2.4 Reduction of partial volume averaging	37
2.4.1 Improvement of image sharpness	37
2.4.2 Radiation dose and noise	39
2.4.3 Partial volume artifacts	40
2.5 Image plane orientation	41

2.5.1 Multiplanar reformatting	41
2.5.2 Direct multiplanar scanning	41
2.6 3-D surface illumination imaging . .	42
2.7 Trade-off considerations	45
References	48

Chapter 3

Technique of cryosectioning	53
3.1 Introduction	53
3.2 Preparation	55
3.2.1 Specimen preparation	55
3.2.2 CT of the specimen	55
3.2.3 Specimen block sectioning	57
3.2.4 Specimen block mounting	57
3.3 Cryomicrotomy and photography . .	58
3.3.1 Cryomicrotome	58
3.3.2 Cryosectioning	59
3.3.3 Photographic set-up	60
3.3.4 Section preservation and staining .	61
References	62

Chapter 4

Temporal bone imaging	65
4.1 Introduction	65
4.2 Patient positioning	65
4.2.1 Definition of the scan planes	66
4.2.2 Patient positioning methods and accessories	70
4.2.3 Modified positions	75
4.3 Patient examination	75
4.3.1 Patient preparation	75
4.3.2 Patient instruction	75
4.3.3 Imaging sequence	76
4.3.4 Image display and photography . .	76
4.3.5 Special techniques (air cisternography, Valsalva maneuver)	77
4.4 Correlative anatomy	77
4.4.1 Transverse plane	78
4.4.2 Coronal plane	88
4.4.3 Sagittal plane	93

4.4.4 Semiaxial plane	98
4.4.5 Semilongitudinal plane	103
4.4.6 Axiopetrosal plane.	106
4.4.7 Longitudinal plane.	109
4.4.8 Inclined sagittal plane	113
4.4.9 Relationship between scan plane orientation and anatomy visualiza- tion	114
4.5 Discussion and conclusions	116
References	118

Chapter 5

Clinical applications in the temporal bone	121
5.1 Cochlear otosclerosis (otospon- giosis)	121
5.1.1 Introduction	121
5.1.2 Imaging and density measurement of spongiotic lesions in the otic cap- sule of patients with cochlear oto- sclerosis	122
5.1.3 Discussion	124
5.2 The visualization of the vestibular aqueduct in Ménière's disease . . .	124
5.2.1 Introduction	124
5.2.2 High-resolution CT of the vestib- ular aqueduct in Ménière's disease. .	125
5.2.3 Discussion	128
References	128

Chapter 6

Imaging of the orbit	131
6.1 Introduction	131
6.2 Patient positioning.	132
6.2.1 Definition of the scan planes . . .	132
6.2.2 Patient positioning methods and accessories	134
6.2.3 Modified positions	137
6.3 Patient examination	139
6.3.1 Patient preparation	139
6.3.2 Patient instruction	139

6.3.3 Imaging sequence	139
6.3.4 Image display and photography . .	141
6.3.5 Special techniques (Valsalva) . . .	141
6.4 Correlative anatomy	141
6.4.1 Transverse plane.	142
6.4.2 Coronal plane	147
6.4.3 Sagittal plane	152
6.4.4 Relationship between scan plane orientation and anatomy visualiza- tion	155
6.5 Discussion and conclusions.	156
References	160

Chapter 7

Clinical applications in the orbit	163
7.1 Direct multiplanar CT in the assess- ment of space-occupying lesions re- lated to the optic nerve	163
7.1.1 Introduction	163
7.1.2 Visualization of the interface be- tween lesions and the nerve tissue of the optic nerve.	163
7.1.3 Discussion	170
7.2 The value of sagittal CT in manage- ment of patients with fractures of the orbital floor	170
7.2.1 Introduction	170
7.2.2 Direct multiplanar high-resolution CT of orbital trauma	171
7.2.3 CT morphology of fractures of the orbital floor	173
7.2.4 CT of orbital floor fractures and the assessment of ocular motility im- pairment.	176
7.2.5 Discussion	183
References	184
Glossary of terms.	187
Subject index.	191
Nomenclature of the temporal bone . . .	203
Nomenclature of the orbit
