

Jens Brange

Galenics of Insulin

The Physico-chemical and
Pharmaceutical Aspects of Insulin
and Insulin Preparations

With the Collaboration of

B. Skelbaek-Pedersen L. Langkjaer U. Damgaard
H. Ege S. Havelund L.G. Heding K.H. Jørgensen
J. Lykkeberg J. Markussen M. Pingel
E. Rasmussen

With 34 Figures and 20 Tables

Springer-Verlag Berlin Heidelberg New York
London Paris Tokyo

Table of Contents

A. Production of Bovine and Porcine Insulin	1
I. Introduction	1
II. Physico-chemical Properties of Insulin Relevant to Production	1
III. Production of Crystalline Insulin	3
IV. Purification of Crystalline Insulin	5
B. Characterization of Insulin	7
I. Purity	7
1. Introduction	7
2. Gel Filtration	7
3. Disc Electrophoresis	8
4. Radioimmunoassay (RIA)	9
5. High Performance Liquid Chromatography (HPLC)	11
II. Standardization	12
1. Bioassay Methods	12
2. Chemical Methods	13
III. Immunogenicity of Insulin	14
C. Insulin Preparations	17
I. Introduction	17
II. Pharmaceutical Chemistry	18
1. Insulin in Solution	18
2. Association of Insulin	20
3. Metal Ion Binding	22
4. Crystals and Crystallization	23
5. Chemical Reactions	27
6. Mechanisms of Prolongation	27
III. Rapid-Acting Preparations	29
1. Introduction	29
2. Acid and Neutral Formulations	30
3. Manufacture	31
4. Absorption	31
IV. Protracted Preparations	32
1. Introduction	32
2. Protamine Insulins	34
3. Insulin Zinc Suspensions (Lente Insulins)	36

4. Biphasic Preparations	38
5. Other Types of Protracted Preparations	39
V. Auxiliary Substances	40
1. Introduction	40
2. Preservatives	40
3. Isotonic Agents	42
4. Buffering Substances	42
VI. Characterization and Testing	43
1. Introduction	43
2. Analytical Tests Applied to all Preparations	43
3. Analytical Control Specific for Special Preparations	43
4. Prolongation Tests	45
VII. Insulin Strengths	46
1. Introduction	46
2. Strengths of Insulin Preparations	46
VIII. Mixing Insulin	48
1. Insulin Mixtures	48
2. Dilutions	50
3. Addition to Intravenous Infusion Fluids	51
IX. Stability	52
1. Physical Stability	52
2. Chemical Stability	54
3. Biological Stability	58
4. Immunogenicity Studies	60
X. Storage and Use of Insulin	60
1. Storage	60
2. Withdrawal of Insulin from the Vial	62
3. Mixing Techniques	63
4. Preloading of Syringes	63
XI. Insulin for Delivery Systems	65
1. Introduction	65
2. Use of Present Insulin Solutions in Infusion Pumps	65
3. Physical Stabilization of Insulin Solutions	67
XII. Insulin Derivatives	69
XIII. Alternative Administration of Insulin	70
D. Human Insulin	75
I. Manufacture	75
1. Sources	75
2. Conversion of Porcine Insulin	75
3. Biosynthesis in <i>E. coli</i>	76
4. Biosynthesis in <i>Saccharomyces cerevisiae</i>	79
II. Preparations	80
References	83
Subject Index	101
