Instabilities and Chaos in Quantum Optics

Editors: F.T. Arecchi and R.G. Harrison

With 135 Figures

Springer-Verlag Berlin Heidelberg New York London Paris Tokyo

Contents

1.	1.1 1.2	roduction. By F.T. Arecchi and R.G. Harrison A Heuristic Approach to Instabilities About This Book erences		
Pa	Part I Instabilities and Chaos in Active Systems			
2.	Ins	tabilities and Chaos in Single-Mode		
		mogeneous Line Lasers. By F.T. Arecchi (With 26 Figures)		
	2.1	Background		
	2.2	Transient Decay Toward a Stable State		
	2.3	Deterministic Chaos		
		2.3.1 Historical Aspects		
		2.3.2 Dynamical Aspects		
		2.3.3 Information Aspects		
		2.3.4 Role of Transients: The Hyperchaos		
	2.4	The Modulated Laser		
	2.5	The Laser with Injected Signal (LIS)		
	2.6	Instabilities in a Laser with Feedback		
	2.7	The Bidirectional Ring Laser		
	2.8	Conclusion		
	2.A	Appendix: A Simple-Minded Approach to Laser Equations		
		2.A.1 The Laser Equations		
		2.A.2 Adiabatic Elimination of Polarization		
		- Modulation and Injection		
		2.A.3 Linear Stability Analysis of Class B Solutions		
		2.A.4 Laser with Injected Signal (LIS)		
		2.A.5 The Bidirectional Class B Ring Laser		
	Refe	erences		

3.	Experimental Measurements of Transitions to Pulsations								
	and Chaos in a Single Mode, Unidirectional Ring Laser								
	with an Inhomogeneously-Broadened Medium								
	-	By N.B. Abraham, A.M. Albano, T.H. Chyba, L.M. Hoffer,							
	M.F.H. Tarroja, S.P. Adams, and R.S. Gioggia								
	(Wi	(With 14 Figures)							
	3.1	Backg	round						
	3.2	The S	ingle-Mode, Inhomogeneously-Broadened,						
		Unidi	rectional Ring Laser						
		3.2.1	Background						
		3.2.2	Experimental Set-Up						
		3.2.3	Thresholds for Transitions from Stable to Pulsed						
			Behavior						
		3.2.4	Changes in the Pulsation Pattern Above the Second						
			Threshold						
		3.2.5	Confirming and Characterizing the Chaos						
	3.3	Discus	ssion						
	Refe	erences							
	4.1 4.2 4.3 4.4 4.5 4.6 4.A 4.B 4.C Refe	4.2 Equations of Motion and the Steady-State Configuration 4.3 Linear Stability Analysis in the Mean-Field Limit 4.4 Adiabatic Elimination of the Atomic Variables 4.5 Dynamical Behavior of the Single-Mode Model 4.6 Power Spectra and Lyapunov Exponents 4.A Appendix: Derivation of (4.14) 4.B Appendix: List of the Coefficients of (4.29)							
5.	Exp	Experimental Observations of Single Mode Laser							
	Inst	Instabilities in Optically Pumped Molecular Lasers							
		By D.J. Biswas, R.G. Harrison, C.O. Weiss, W. Klische,							
	D. I	angois	se, P. Glorieux, and N.M. Lawandy (With 8 Figures)						
	5.1		round						
	5.2	Optica	ally Pumped Far Infrared Lasers						
		5.2.1	Resonant Pumping						
		5.2.2	Detuned Pumping						
		5.2.3	Single-Mode Laser Instability in Near Resonantly						
			Pumped Mid-Infrared Systems						
	5.3	Concl	usion						
	Refe	rences							

		ingh-Gam riee-Diection basers						
		in High-Gain Free-Electron Lasers By R. Bonifacio and F. Casagrande						
	6.1 Introduction							
	6.2	The Quantum Hamiltonian Model						
	6.3	Classical Limit and Classical Treatment of Amplified						
	0.5	Spontaneous Emission						
	6.4	The Basic Equations of the Linear Quantum Regime						
	6.5	Analysis on Resonance and for Sufficiently Long Times						
	6.6 "Harmonic Oscillator" Limit							
							6.A	Appendix
