

Contents

Chapter 1. Heights and Integral Points	1
§1. Absolute values and the product formula	1
§2. Height functions	2
§3. Weil functions	7
§4. Integral points	10
Chapter 2. Diophantine Approximations	16
§1. Roth's theorem and its generalizations	16
§2. A reformulation of Schmidt's theorem	17
§3. Linear equations in units	19
§4. A theorem on integral points	21
§5. Arithmetic distance functions and Schmidt's theorem	24
§6. Exceptional hyperplanes	27
Chapter 3. A Correspondence with Nevanlinna Theory	30
§1. Introduction to Nevanlinna theory	31
§2. The correspondence in the case of one variable	33
§3. Defects	36
§4. The higher dimensional case	38
§5. Some examples	43
Chapter 4. Consequences of the Main Conjecture	46
§1. Degeneracy of integral points	46
§2. Integral points on abelian varieties	47
§3. Lang's conjectures on curvature and hyperbolicity	48
§4. Hall's conjecture	51
Chapter 5. The Ramification Term	57
§1. A generalized Chevalley-Weil theorem	57
§2. The ramification term	61
§3. The $\mathbf{P}^1$ case of the General Conjecture	65
§4. Other remarks on the General Conjecture	68
§5. Examples: Fermat, abc, Hall, and Hall-Lang-Stark	70
§6. The (split) function field case	77
§7. The ramification term in the Conjecture using (1,1) forms . .	80
Appendix ABC. The Masser-Oesterlé "abc" conjecture	84

Chapter 6. Approximation to Hyperplanes	89
§1. Successive minima	90
§2. Davenport's lemma	96
§3. Multilinear algebra	99
§4. The start of the algebraic proof	104
§5. A sketch of the analytic proof	112
§6. The remainder of the algebraic proof	118
§7. Conclusion	122
Bibliography	124
