CONTENTS

0. Introduction 1

PART I

I. Preliminaries

1. The Setting 7
2. Doolittle Diagrams, Couples, and Regular Couples 12
3. Interpolation Spaces 16

II. The Real Method

1. The J- and K-methods 18
2. The Duality Theorem 22
3. The Equivalence Theorem 25

III. The Complex Method

1. The General Duality Theorem 33
2. The Duality Theorem 38

PART II

IV. Categorical Notions

1. Categories of Doolittle Diagrams 44
2. Doolittle Diagrams of Banach Spaces 50
3. Limits, Colimits, and Morphisms 54
4. Functors and Natural Transformations 58
5. Interpolation Spaces and Functors 64

V. Finite Dimensional Doolittle Diagrams

1. 1-dimensional Doolittle Diagrams and Applications 73
2. The Structure Theorem 79
3. Operators of Finite Rank 84
4. Applications 86

VI. Kan Extensions

1. Definition 93
2. Examples 94
3. Computable Functors 99
4. Aronszajn-Gagliardo Functors 100
5. Computability of Lan_A 104

VII. Duality

1. Dual Functors 106
2. Descriptions of the Dual Functors 108
3. Duality for Computable Functors 111
4. Approximate Reflexivity 115
5. Duals of Interpolation Functors 117

PART III

VIII. More About Duality

1. Comparison of Parts I and II 123
2. Quasi-injectivity and Quasi-projectivity 126

IX. The Classical Methods from a Categorical Viewpoint

1. Review of Results 132
2. The Real Method Revisited 133
3. The Complex Method Revisited 143
4. The Dual Functor of C_θ 154

Bibliography 160

List of Special Symbols and Abbreviations 162
