Acknowledgments	v
To the Reader	xiii
1 General Introduction	xiii
2 Summary of Contents and Historical Notes	xv
CHAPTER 1	
Experiments—Decision Spaces	1
1 Introduction	1
2 Vector Lattices— L -Spaces—Transitions	3
3 Experiments—Decision Procedures	5
4 A Basic Density Theorem	6
5 Building Experiments from Other Ones	10
6 Representations—Markov Kernels	11
CHAPTER 2	
Some Results from Decision Theory: Deficiencies	16
1 Introduction	16
2 Characterization of the Spaces of Risk Functions: Minimax Theorem	16
3 Deficiencies; Distances	18
4 The Form of Bayes Risks—Choquet Lattices	23
CHAPTER 3	
Likelihood Ratios and Conical Measures	29
1 Introduction	29
2 Homogeneous Functions of Measures	30

3 Deficiencies for Binary Experiments: Isometries	34
4 Weak Convergence of Experiments	37
5 Boundedly Complete Experiments	40
6 Convolutions: Hellinger Transforms	42
7 The Blackwell–Sherman–Stein Theorem	43
 CHAPTER 4	
Some Basic Inequalities	46
1 Introduction	46
2 Hellinger Distances: L_1 -Norm	46
3 Approximation Properties for Likelihood Ratios	49
4 Inequalities for Conditional Distributions	52
 CHAPTER 5	
Sufficiency and Insufficiency	57
1 Introduction	57
2 Projections and Conditional Expectations	58
3 Equivalent Definitions for Sufficiency	62
4 Insufficiency	67
5 Estimating Conditional Distributions	73
 CHAPTER 6	
Domination, Compactness, Contiguity	81
1 Introduction	81
2 Definitions and Elementary Relations	81
3 Contiguity	84
4 Strong Compactness and a Result of D. Lindae	92
 CHAPTER 7	
Some Limit Theorems	96
1 Introduction	96
2 Convergence in Distribution or in Probability	97
3 Distinguished Sequences of Statistics	99
4 Lower-Semicontinuity for Spaces of Risk Functions	108
5 A Result on Asymptotic Admissibility	112
 CHAPTER 8	
Invariance Properties	118
1 Introduction	118
2 The Markov–Kakutani Fixed Point Theorem	119

3 A Lifting Theorem and Some Applications	125
4 Automatic Invariance of Limits	132
5 Invariant Exponential Families	144
6 The Hunt–Stein Theorem and Related Results	151

CHAPTER 9

Infinitely Divisible, Gaussian, and Poisson Experiments	154
---	-----

1 Introduction	154
2 Infinite Divisibility	154
3 Gaussian Experiments	155
4 Poisson Experiments	159
5 A Central Limit Theorem	165

CHAPTER 10

Asymptotically Gaussian Experiments: Local Theory	172
---	-----

1 Introduction	172
2 Convergence to a Gaussian Shift Experiment	173
3 A Framework which Arises in Many Applications	179
4 Weak Convergence of Distributions	184
5 An Application of a Martingale Limit Theorem	187
6 Asymptotic Admissibility and Minimality	195

CHAPTER 11

Asymptotic Normality—Global	206
-----------------------------	-----

1 Introduction	206
2 Preliminary Explanations	208
3 Construction of Centering Variables	213
4 Definitions Relative to Quadratic Approximations	219
5 Asymptotic Properties of the Centerings \hat{Z}	225
6 The Asymptotically Gaussian Case	238
7 Some Particular Cases	268
8 Reduction to the Gaussian Case by Small Distortions	283
9 The Standard Tests and Confidence Sets	293
10 Minimum χ^2 and Relatives	305

CHAPTER 12

Posterior Distributions and Bayes Solutions	324
---	-----

1 Introduction	324
2 Inequalities on Conditional Distributions	325
3 Asymptotic Behavior of Bayes Procedures	330
4 Approximately Gaussian Posterior Distributions	336

CHAPTER 13	
An Approximation Theorem for Certain Sequential Experiments	346
1 Introduction	346
2 Notations and Assumptions	347
3 Basic Auxiliary Lemmas	350
4 Reduction Theorems	354
5 Remarks on Possible Applications	362
 CHAPTER 14	
Approximation by Exponential Families	370
1 Introduction	370
2 A Lemma on Approximate Sufficiency	371
3 Homogeneous Experiments of Finite Rank	377
4 Approximation by Experiments of Finite Rank	387
5 Construction of Distinguished Sequences of Estimates	391
 CHAPTER 15	
Sums of Independent Random Variables	399
1 Introduction	399
2 Concentration Inequalities	401
3 Compactness and Shift-Compactness	419
4 Poisson Exponentials and Approximation Theorems	423
5 Limit Theorems and Related Results	434
6 Sums of Independent Stochastic Processes	444
 CHAPTER 16	
Independent Observations	457
1 Introduction	457
2 Limiting Distributions for Likelihood Ratios	458
3 Conditions for Asymptotic Normality	468
4 Tests and Distances	475
5 Estimates for Finite Dimensional Parameter Spaces	493
6 The Risk of Formal Bayes Procedures	509
7 Empirical Measures and Cumulatives	529
8 Empirical Measures on Vapnik–Červonenkis Classes	541
 CHAPTER 17	
Independent Identically Distributed Observations	555
1 Introduction	555
2 Hilbert Spaces Around a Point	556
3 A Special Role for \sqrt{n} : Differentiability in Quadratic Mean	573

4 Asymptotic Normality for Rates Other than \sqrt{n}	590
5 Existence of Consistent Estimates	594
6 Estimates Converging at the \sqrt{n} -Rate	604
7 The Behavior of Posterior Distributions	614
8 Maximum Likelihood	621
9 Some Cases where the Number of Observations Is Random	625
 Appendix: Results from Classical Analysis	 634
1 The Language of Set Theory	634
2 Topological Spaces	638
3 Uniform Spaces	640
4 Metric Spaces	641
5 Spaces of Functions	643
6 Vector Spaces	645
7 Vector Lattices	650
8 Vector Lattices Arising from Experiments	657
9 Lattices of Numerical Functions	672
10 Extensions of Positive Linear Functions	677
11 Smooth Linear Functionals	697
12 Derivatives and Tangents	707
 Bibliography	 727
Index	737
