

Contents

Chapter I	The homotopy index theory	1
1.1	Local semiflows	1
1.2	The no blow-up condition. Convergence of semiflows	5
1.3	Isolated invariant sets and isolating blocks	6
1.4	Admissibility	13
1.5	Existence of isolating blocks	18
1.6	Homotopies and inclusion induced maps	26
1.7	Index and quasi-index pairs	29
1.8	Some special maps used in the construction of the Morse index	33
1.9	The Categorical Morse index	39
1.10	The homotopy index and its basic properties	49
1.11	Linear semiflows. Irreducibility	57
1.12	Continuation of the homotopy index	64
Chapter II	Applications to partial differential equations ..	72
2.1	Sectorial operators generated by partial differential operators	73
2.2	Center manifolds and their approximation	76
2.3	The index product formula	78
2.4	A one-dimensional example	89
2.5	Asymptotically linear systems	94
2.6	Estimates at zero and nontrivial solution of elliptic equations	109
2.7	Positive heteroclinic orbits of second-order parabolic equations	117
2.8	A homotopy index continuation method and periodic solutions of second-order gradient systems	125
Chapter III	Selected topics	140
3.1	Repeller-attractor pairs and Morse decompositions	141

3.2	Block pairs and index triples	147
3.3	A Morse equation	155
3.4	The homotopy index and Morse theory on Hilbert manifolds	163
3.5	Continuation of the categorial Morse index along paths	179
	Bibliographical notes and comments	195
	Bibliography	200
	Index	206
