

CONTENTS

Preface	V
Acknowledgements	VIII
Preface to the second edition	IX
List of abbreviations	X
Standardized denotations	XI
Standard notations	XII
Contents	XIII
 CHAPTER I. Natural and formal logic	 1
1. Logic abstracted from natural reasoning	1
2. Logical rules	6
 CHAPTER II. The connection method in propositional logic	 11
1. The language of propositional logic	11
2. The semantics of propositional logic	20
3. A basic syntactic characterization of validity	24
4. The connection calculus	31
5. Soundness, completeness, and confluence	39
6. Algorithmic aspects	44
7. Exercises	52
8. Bibliographical and historical remarks	54
 CHAPTER III. The connection method in first-order logic	 55
1. The language of first-order logic	56
2. The semantics of first-order logic	63
3. A basic syntactic characterization of validity	67
4. Transformation to normal form	79
5. Unification	84
6. The connection calculus	93
7. Algorithmic aspects	104
8. Exercises	110
9. Bibliographical and historical remarks	112
 CHAPTER IV. Variants and improvements	 115
1. Resolution	116
2. Linear resolution and the connection method	129
3. On performance evaluation	132
4. Connection graph resolution	138
5. Connection procedure for arbitrary matrices	148

6. Reduction, factorization, tautological circuits	155
7. Logical calculi of natural deduction	162
8. An alternative for skolemization	169
9. Linear unification	176
10. Splitting by need	185
11. Summary and prospectus	196
12. Exercises	202
13. Bibliographical and historical remarks	205
 CHAPTER V. Applications and extensions	 207
1. Structuring and processing knowledge	208
2. Programming and problem solving	213
3. The connection method with equality	223
4. Rewrite rules and generalized unification	229
5. The connection method with induction	236
6. The connection method in higher-order logic	242
7. Aspects of actual implementations	249
8. Omissions	258
9. Exercises	259
10. Bibliographical and historical remarks	260
