

# Contents

<b>1. Introduction</b>	<b>1</b>
1.1 On Zero-Gravity	1
1.2 Surface or Capillary Forces	3
1.3 On the History of the Problem	6
1.4 Subject Matter of the Book	9

---

## Part I Statics

---

<b>2. Equilibrium Shapes of a Liquid</b>	<b>16</b>
2.1 Equilibrium Conditions	16
2.1.1 Basic Assumptions and Notations	16
2.1.2 Hydrostatic Conditions	17
2.1.3 Equilibrium of a Capillary Free Surface	18
2.1.4 Derivation of Equilibrium Conditions from the Variational Principle of Stationary Potential Energy	19
2.1.5 Vessel with a Nonsmooth Surface	21
2.1.6 Other Generalizations	22
2.2 The Equilibrium Surface Problem	25
2.2.1 Arbitrary Parametric Representation of a Surface	25
2.2.2 Equilibrium Surface with an Equation of the Type $z = f(x, y)$	29
2.2.3 Axisymmetric Equilibrium Problem	30
2.2.4 Plane Equilibrium Problem	32
2.2.5 Equation for a Bundle of Equilibrium Surfaces	32
2.2.6 On Mass Force Potential and Similitude Numbers	33
2.3 The Construction of Simply Connected Axisymmetric Equilibrium Shapes	34
2.3.1 Family of Equilibrium Lines	34
2.3.2 Determination of an Equilibrium Line from Known Values of $\alpha$ and $v$	35
2.4 The Axisymmetric Problem for a Vessel at Rest	38
2.4.1 General Remarks	38
2.4.2 Positive Loading	39
2.4.3 Negative Loading	40
2.4.4 Zero-Gravity	43
2.4.5 Examples	46
2.4.6 Reference Commentaries	48
2.5 Axisymmetric Shapes of a Rotating Liquid Under Zero-Gravity	50
2.5.1 Properties of the Solutions of Equilibrium Differential Equations	50

2.5.2	Solution in Elliptic Integrals	52
2.5.3	Equilibrium Surfaces in a Vessel	53
2.5.4	Equilibrium Shapes of a Rotating Drop	55
2.5.5	Reference Commentaries	56
2.6	Axisymmetric Rotation Problem in a Gravitational Force Field	57
2.6.1	General Remarks	57
2.6.2	Cylinder	59
2.6.3	Cone and Sphere	59
2.6.4	Application of the First Integral of the Equilibrium Equation	60
2.7	Axisymmetric Problem for Large Bond Numbers	61
2.7.1	Formulation of the Problem	61
2.7.2	Construction of the Asymptotic Expansion	62
2.7.3	Boundary Layer Equation	63
2.7.4	Remarks	66
2.7.5	Reference Commentaries	67
2.8	An Axisymmetric Flat (Gently Sloping) Equilibrium Surface	67
2.8.1	General Remarks	67
2.8.2	Cone and Cylinder	69
2.8.3	Drop on a Plane	71
2.9	Doubly Connected Axisymmetric Equilibrium Surfaces	72
2.9.1	State of Rest Under Zero-Gravity	72
2.9.2	Gravitational Force Field	76
2.9.3	Rotation of a Liquid Under Zero-Gravity	82
2.9.4	Annular Equilibrium Shapes	83
2.10	The Plane Problem for a Gravitational Force Field	83
2.10.1	Properties of Integral Curves	85
2.10.2	Solution in Elliptic Integrals	86
2.10.3	Determination of the Shape of a Symmetric Equilibrium Line	87
2.10.4	Channel with a Semi-Infinite Cross Section	88
2.10.5	Linearized Problem	92
2.11	The Two-Dimensional Problem for Large Bond Numbers	94
2.11.1	Formulation of the Two-Dimensional Problem	94
2.11.2	Construction of the Asymptotic Expansion	96
2.12	Numerical Methods of Constructing Equilibrium Surfaces of a General Type	98
2.12.1	Variational Problem	98
2.12.2	Method of Local Variations	99
2.12.3	Optimal Discretization Method	101
2.12.4	Review of Other Methods and Results	102
2.13	Small Perturbations of the Equilibrium Surface	104
2.13.1	Formulation of the Problem	104
2.13.2	Linearization of the Problem	104
2.13.3	Axisymmetric Case	108
2.13.4	Small Bond Numbers	109
2.13.5	Gently Sloping (Flat) Surfaces	110
2.13.6	Nonaxisymmetric Shapes of a Drop on a Plane	115
2.13.7	On Numerical Construction of Equilibrium Surfaces	119

<b>3. Stability of Equilibrium States of a Liquid</b> .....	<b>120</b>
3.1 Introduction .....	120
3.2 The Second Variation of Potential Energy .....	125
3.2.1 Expression for the Second Variation .....	125
3.2.2 Spectral Stability Criterion .....	126
3.2.3 Axisymmetric Unperturbed Problem .....	129
3.2.4 Parameter-Dependent System .....	130
3.2.5 Stability of Cylindrical Equilibrium Surfaces in a Channel .....	133
3.3 Simply Connected Equilibrium Surfaces in the Axisymmetric Problem ..	134
3.3.1 Properties of Eigenvalues .....	134
3.3.2 Maximal Stability Regions .....	135
3.3.3 Critical Value of the Parameter $\chi_1$ .....	136
3.4 Critical Values of the Boundary Parameter for Main Types of Force Fields .....	137
3.4.1 Zero-Gravity .....	137
3.4.2 Horizontal Equilibrium Surface in a Uniform Gravitational Force Field .....	139
3.4.3 Uniform Field, Positive Loads .....	140
3.4.4 Uniform Field, Negative Loads .....	142
3.4.5 Liquid Rotating Under Zero-Gravity .....	143
3.4.6 Example .....	146
3.5 The Determination of Critical Loads .....	146
3.5.1 Cylindrical Vessel .....	147
3.5.2 Liquid in a Cone .....	150
3.5.3 Pendent Liquid Drop on a Horizontal Plane .....	152
3.5.4 Liquid with a Doubly Connected Free Surface .....	154
3.6 On the Stability of Axisymmetric Equilibrium Forms of a Rotating Liquid	156
3.6.1 Liquid in a Cylindrical Vessel .....	157
3.6.2 Cylindrical Free Surface .....	160
3.6.3 Liquid Column Between Parallel Plates .....	162
3.6.4 Stability of an Infinite Liquid Column .....	163
3.7 Two Classical Problems .....	164
3.7.1 Rotating Liquid Drop .....	164
3.7.2 Annular Equilibrium Configurations .....	166
3.8 The Stability of Cylindrical Equilibrium Surfaces in Channels for Specific Force Fields .....	167
3.8.1 General Case .....	168
3.8.2 Stability of Symmetric Equilibrium States .....	170
3.8.3 Zero-Gravity Conditions .....	172
3.8.4 Horizontal Equilibrium Surface in a Gravitational Force Field ....	173
3.8.5 Uniform Field, Positive Loads .....	174
3.8.6 Uniform Field, Negative Loads .....	176
3.8.7 Rectangular Channel .....	179
3.8.8 Plane Drop on a Horizontal Plate .....	181
3.8.9 Sectorial Channel .....	182
3.9 Stable Equilibrium of a Free Surface in Contact with the Edge of a Vessel	183
3.9.1 Formulation of the Problem .....	183
3.9.2 Conditions of Nonnegative $\delta\mathcal{U}$ .....	184

3.9.3	Conditions of Stability in Terms of $\delta^2 \mathcal{U}$	186
3.9.4	Axisymmetric Case	186
3.9.5	Drop in Contact with an Edge	187
3.9.6	Limiting Case	188
3.10	Quasistatic Evolution and Rupture of an Equilibrium Shape	189
3.10.1	Introduction	189
3.10.2	Extrusion of a Liquid from a Circular Orifice	189
3.10.3	Transporting Water in a Sieve	193
3.11	Equilibrium Stability of a Liquid Zone	194
3.11.1	Zero-Gravity	194
3.11.2	Floating Zone Method	198
3.11.3	Gravitational Force Field	199
3.11.4	Problem I	200
3.11.5	Problems II and III	202
3.11.6	General Stability Criterion	206
3.12	The Stability of an Equilibrium State with an Unconnected Free Surface	207
3.12.1	Formulation of the Problem	207
3.12.2	Analogue of Maxwell's Problem	209
3.12.3	Vessels with Cylindrical Sections	209
3.12.4	Sectional Axisymmetric Problem	211
3.12.5	Properties of Eigenvalues	211
3.12.6	Method of Calculating Stability	213
3.12.7	Example	214
3.12.8	Closed Systems	215
3.12.9	Reference Commentaries	218
4.	<b>Bifurcation of Equilibrium States</b>	219
4.1	Introduction	219
4.2	Bifurcation of Equilibrium Shapes. The General Case	223
4.2.1	Case of the Expansibility of a Solution in Integral Powers of the Parameter	223
4.2.2	Expansion of the Solution into Integral and Half-Integral Powers of the Parameter	229
4.2.3	Variants	230
4.3	Bifurcation in a Circular Cylinder for a Gravitational Force Field	232
4.3.1	Formulation of the Problem	232
4.3.2	The Case $\alpha = \pi/2$	233
4.3.3	Arbitrary Wetting Angle	235
4.3.4	Stability Margin	240
4.4	Other Problems	242
4.4.1	Pendent Drop on a Horizontal Plane	242
4.4.2	Bifurcation of the Axisymmetric Shape at the Edge of a Vessel	246
4.4.3	Rotating Cylindrical Column of Liquid	249
4.4.4	Rotating Drop	253
4.4.5	Plane Problem for a Rectangular Channel	257
4.4.6	Plane Problem of a Pendent Drop	261
4.5	On the Concept of the Stability Margin in Problems of Fluid Mechanics	262
4.5.1	Introduction	262

4.5.2	Three Examples	263
4.5.3	On Continuous Chains of Stable States	264
4.5.4	Possible Approach to the Concept of the Stability Margin	265
4.5.5	Other Approaches	267
4.6	The Lyapunov-Schmidt Method	269
4.6.1	Fredholm Operators	269
4.6.2	Local Extensions of Solutions of Nonlinear Equations	270
4.6.3	Application to the Problem of Bifurcation of Equilibrium Shapes	273

---

## Part II Small Oscillations

---

5.	<b>Small Oscillations of an Ideal Liquid</b>	276
5.1	Introduction	276
5.2	Formulation of the Small Oscillations Problem for an Ideal Liquid	277
5.2.1	Basic Equations	277
5.2.2	Dynamic Condition on an Equilibrium Surface	278
5.2.3	Transition to Dimensionless Variables. Normal Oscillations	280
5.3	Simple Problems Admitting Separation of Variables	281
5.3.1	Cylindrical Vessel	282
5.3.2	Rectangular Channel	285
5.3.3	Conic Vessel	286
5.3.4	Vessel in the Form of a Cylindrical Sector. Liquid Column	289
5.3.5	Spherical Self-Gravitating Liquid Layer	291
5.3.6	Supplement. Nonlinear Radial Oscillations of a Bubble	294
5.4	Transition to the Operator Equation	296
5.4.1	Derivation of the Equation	296
5.4.2	Orthogonal Expansion of the Space $L_2(\Omega)$ of Vector-Functions	300
5.4.3	Projection of Euler's Equation	301
5.4.4	Refinement of the Properties of Operators $\mathcal{A}$ and $\mathcal{B}$	302
5.4.5	Energy Spaces	303
5.5	Normal Oscillations and Variational Methods for Determining Their Frequencies	304
5.5.1	Spectrum Structure, Completeness of the System of Eigenfunctions	304
5.5.2	On the Stability of Equilibrium States	306
5.5.3	Extremal Properties of Eigenvalues	308
5.5.4	Ritz Method	310
5.5.5	Application of the Eigenfunctions of Operators $\mathcal{A}$ and $\mathcal{B}$	311
5.6	Oscillations of a System of Immiscible Liquids	312
5.6.1	Formulation of the Problem	312
5.6.2	Transition to Operator Equation	313
5.6.3	Variational Methods	315
5.6.4	Some Alternative Versions	315
5.6.5	Examples	317
5.6.6	Operator Treatment of the Problem of Oscillations of a System of Immiscible Liquids	320

5.7 A Rotating Liquid. Application of the Function of State .....	322
5.7.1 General Case .....	323
5.7.2 Function of State .....	324
5.7.3 Normal Oscillations .....	325
5.7.4 Oscillations of a Liquid Column Under Zero-Gravity .....	326
5.7.5 Asymptotic Formulas .....	328
5.7.6 General Conclusions .....	329
5.7.7 Variational Approach .....	330
5.7.8 System of Immiscible Liquids .....	331
5.7.9 Oscillations of Two Liquids in a Cylindrical Vessel .....	332
5.8 Functional Approach to the Problem of Oscillations of an Ideal Rotating Liquid .....	334
5.8.1 Projection of Equations of Motion .....	334
5.8.2 Transition to the Operator Equation .....	335
5.8.3 Properties of Operators of the Problem .....	337
5.8.4 Normal Oscillations .....	338
5.8.5 On the Existence of Surface Waves .....	340
5.8.6 On the Completeness and Minimality of Surface Wave Modes ....	344
5.8.7 On the Existence of Internal Waves .....	346
<b>6. Methods of Calculating Linear Oscillations of an Ideal Liquid .....</b>	<b>349</b>
6.1 Plane Oscillations in a Rectangular Channel .....	349
6.1.1 Ritz Method .....	349
6.1.2 Computations .....	352
6.1.3 Results of Computations .....	352
6.2 Plane Oscillations in a Sectorial Channel .....	355
6.2.1 Method of Collocation .....	355
6.2.2 Results of Computations .....	357
6.3 Plane Problem on the Oscillations of a Weightless Drop Abutting a Plane	358
6.3.1 Introduction .....	358
6.3.2 Integral Equations Method .....	359
6.3.3 Results of Computations .....	361
6.3.4 Asymptotic Formulas for Small $\alpha$ .....	362
6.3.5 Plane Problem on the Oscillations of a Bubble .....	365
6.4 Plane Oscillations in a Circular Channel .....	366
6.4.1 Application of the Ritz Method .....	366
6.4.2 Results of Computations .....	366
6.4.3 Asymptotic Formulas for Small and Large Fillings .....	368
6.5 Oscillations in a Circular Cylindrical Vessel .....	369
6.5.1 Introduction .....	369
6.5.2 Application of Method 1 .....	370
6.5.3 Application of Method 2 .....	371
6.5.4 Results of Computations; the Principal Mode .....	373
6.5.5 Results of Computations; Other Modes .....	374
6.5.6 On the Calculation of Frequencies and Oscillation Modes of a Rotating Liquid .....	375
6.6 Oscillations in a Spherical Vessel .....	378
6.6.1 Introduction .....	379

6.6.2	Method of Numerical Solution	382
6.6.3	Results of Computations	382
6.6.4	Asymptotic Formulas for Small and Large Fillings	385
6.6.5	Oscillations of a Weightless Drop Adjoining a Plane	385
6.6.6	Oscillations of a Rotating Liquid Drop	387
<b>7.</b>	<b>Linear Oscillations of a Viscous Liquid</b>	<b>392</b>
7.1	Introduction	392
7.2	Formulation of the Problem. Properties of the Spectrum	392
7.2.1	Basic Equations	392
7.2.2	Normal Oscillations	394
7.2.3	Properties of the Spectrum	396
7.2.4	Stability Theorem	397
7.2.5	Application of Galerkin's Method	397
7.3	Free Oscillations of a Self-Gravitating Liquid Globe	398
7.3.1	Generalized Spherical Functions	398
7.3.2	Characteristic Equation of the Problem	401
7.3.3	Properties of the Spectrum for any $\nu$	403
7.3.4	Asymptotic Formula for the Minimum Eigenvalue for $l \rightarrow \infty$	407
7.3.5	Asymptotic Formula for Low Viscosity	409
7.3.6	Asymptotic Formula for High Viscosity	410
7.3.7	Other Cases	411
7.4	Oscillations of a Rotating Liquid Circle. Model Problem	412
7.4.1	Derivation of the Characteristic Equation	412
7.4.2	Properties of the Spectrum for $\omega_0 = 0$	414
7.4.3	General Properties of the Spectrum for $\omega_0 \neq 0$	414
7.4.4	Limiting Cases	416
7.4.5	Effect of Gyroscopic Stabilization	418
7.4.6	Special Cases	419
7.5	Oscillations of a Low-Viscosity Rotating Liquid Ring	419
7.5.1	Basic Equations	420
7.5.2	Problem of Normal Oscillations of an Ideal Liquid	421
7.5.3	Low Viscosity	422
7.5.4	Oscillations of a Coaxial System of Liquids	425
7.6	Oscillations of a Spherical Layer of a Low-Viscosity, Self-Gravitating Liquid	427
7.6.1	Formulation of the Problem	427
7.6.2	Boundary Layer Method	429
7.6.3	Solution of the Characteristic Equation	430
7.6.4	Variants	432
7.6.5	Oscillations of a Concentric System of Liquids	434
7.7	Application of the Boundary Layer Method for an Axisymmetric Vessel	436
7.7.1	General Scheme of the Boundary Layer Method	436
7.7.2	Derivation of Boundary Layer Solutions	438
7.7.3	Determination of Correction to the Complex Damping Factor	440
7.7.4	Special Cases	441
7.8	Rotating Masses of Low-Viscosity Liquids	442
7.8.1	Peculiarities of the Problem	442

7.8.2	Determination of the Quantity $\lambda^2$ .....	443
7.8.3	Special and Limiting Cases; Results of Calculations .....	444
7.9	General Problem of the Oscillations of a Rotating Viscous Capillary Liquid .....	445
7.9.1	Formulation of the Problem .....	446
7.9.2	Two Auxiliary Problems .....	446
7.9.3	Transition to the Operator Equations .....	449
7.9.4	Transformation of System (7.9.17); Properties of the Operators of the Problem .....	451
7.9.5	The Basic Theorem .....	455
7.9.6	Asymptotic Form for High Viscosity .....	456
7.10	Reference Indications for Part II .....	459
7.10.1	Oscillations of an Ideal Liquid .....	459
7.10.2	Oscillations of a Viscous Liquid .....	460

---

## Part III Convection

---

8.	Convection in a Self-Gravitating Liquid .....	464
8.1	Introduction .....	464
8.2	Formulation of the Problem .....	465
8.2.1	Equilibrium Conditions .....	465
8.2.2	Equations of Free Convection .....	466
8.2.3	Operator Equations .....	469
8.3	Stability Boundary for a Spherical Layer with Rigid Walls .....	470
8.3.1	Separation of Variables .....	470
8.3.2	Properties of Kernels $G_k(r, s)$ .....	473
8.3.3	Properties of Eigenvalues .....	474
8.3.4	Methods of Finding the Critical Rayleigh Numbers .....	476
8.3.5	Convection in a Spherical Vessel .....	477
8.3.6	Convection in a Thin Layer .....	478
8.4	Spherical Layer with a Free Outer Surface .....	479
8.4.1	Boundary-Value Problem .....	479
8.4.2	Reduction to an Integral Equation .....	481
8.4.3	Properties of Kernels .....	482
8.4.4	Properties of Eigenvalues .....	483
8.4.5	Thin Spherical Layer .....	486
8.4.6	Layer with an Inner Free Surface .....	488
8.5	Bifurcation of Solutions .....	490
8.5.1	Bifurcation Points .....	490
8.5.2	Bifurcation Equation in the Convection Problem .....	491
8.5.3	Application of the Method of Indeterminate Coefficients .....	494
8.5.4	Stability of Convective Motion .....	494
8.5.5	Calculation of Convection Flow in a Sphere .....	498
8.5.6	Direct Numerical Computation .....	503
8.5.7	Influence of Rotation .....	505
8.5.8	Some Additional Reference Commentaries to Chap. 8 .....	507

<b>9. Thermocapillary Convection</b> .....	508
9.1 Introduction .....	508
9.1.1 Formulation of the Problem .....	508
9.1.2 Reference Commentaries .....	510
9.2 Stability Boundary .....	511
9.2.1 Spherical Layer .....	511
9.2.2 Thin Layer .....	516
9.2.3 A Bubble and a Drop .....	517
9.2.4 Rectangular Channel: Formulation of the Problem .....	520
9.2.5 Application of Galerkin's Method .....	522
9.2.6 Reference Commentaries .....	524
9.3 Convective Flows in a Spherical Layer After Loss of Stability .....	526
9.3.1 Formulation of the Problem .....	526
9.3.2 Difference Scheme .....	529
9.3.3 Flow Structure and Intensities .....	531
9.4 Forced Thermocapillary Flows in a Rectangular Channel .....	533
9.4.1 Formulation of the Problem; the Newton-Kantorovich Method ...	533
9.4.2 Structure of Convection .....	535
9.4.3 Effect of the Curvature of Free Surface .....	535
9.4.4 Reference Commentaries .....	540
9.5 Thermocapillary Motion in a Thin Liquid Layer .....	541
9.5.1 Formulation of the Problem .....	541
9.5.2 Derivation of the Equation for a Thin Layer .....	542
9.5.3 Steady-State Solution .....	546
9.5.4 Limiting Regimes of Spreading of a Drop .....	547
9.5.5 Stability of a Layer of Constant Thickness .....	548
9.6 Nonlinear Thermocapillary Convection in Processes of Space Technology (Reference Commentaries) .....	549
9.6.1 Effect of Convection on Preparation of New Materials Under Zero-Gravity Conditions .....	549
9.6.2 Migration of a Bubble and a Drop .....	551
<b>References</b> .....	553
References to Preface and Introduction .....	553
References to Part I (Chapters 2 – 4) .....	558
Supplementary References .....	566
References to Part II (Chapters 5 – 7) .....	567
Supplementary References .....	571
References to Part III (Chapters 8 – 9) .....	573
Supplementary References .....	579
<b>Subject Index</b> .....	581
