

CONTENTS

Preface	III
A. Introduction	1
1. Concept of "gall" or "cecidium"	1
2. Classification of galls according to KÜSTER (1911)	2
B. Cecidogenous parasites and their modes of action	5
1. Viruses	5
2. Cecidophyta	9
2.1 Bacteria	9
2.11 Mycoplasmas	9
2.12 The bacteria proper	10
2.2 Algae	19
2.3 Fungi	19
2.31 General comments	19
2.32 Archimycetes	20
Family Olpidiaceae	20
Family Synchytriaceae	21
Family Rhizidiaceae	25
Family Plasmodiophoraceae	25
Family Olpidiopsidaceae	26
2.33 Phycomycetes	26
Family Cladochytriaceae	28
Family Peronosporaceae	29
2.34 Septomycetes	32
Class Ascomycetes	32
Subclass Protoascomycetes	32
Family Protomycetaceae	32
Family Exoascaceae	32
Subclass Euascomycetes	33
Class Basidiomycetes	38
Order Uredinales (rusts)	38
Hypertrophying effects	38
Hypertrophy by the aecial stage	41
Hypertrophy by the uredial stage	41
Hypertrophy by the telial stage	41
Organoid effects	43
Order Ustilaginales (smuts)	44
Family Ustilaginaceae	44
Family Tilletiaceae	48
Order Exobasidiales	51
Family Exobasidiaceae	51
2.4 Generalizations on the structure of phytocecidia	51
3. Cecidozoa	51

3.1	Systematic position of cecidozoa	51
3.2	Cecidogenous "worms"	52
3.21	Cecidogenous nematodes	52
	Literature review	52
	General biology	53
	Modes of action	57
	Hypertrophy with giant nutritive cells	57
	Nutritive metaplasia without hypertrophy	58
	Hyperplasia	58
	Hyperplasia with growth inhibition at the radicle tip	58
	Hyperplasia with formation of spongy parenchyma	60
	Recent progress in nematology	60
3.3	Cecidogenous arthropods	60
3.31	Cecidogenous Acari	60
	Family Tarsonemidae	60
	Family Eriophyidae	61
	Literature review	61
	Morphology and biology of eriophyids	63
	Eriophyid galls	63
	Literature	63
	Morphology and anatomy of eriophyid galls	65
	Organoid galls	66
	Histoid galls	67
	Economic importance	72
3.32	Cecidogenous insects	77
3.321	Cecidogenous Thysanoptera	77
	General characters and literature	77
	Cecidogenetic effects	77
3.322	Cecidogenous Hemiptera	82
	General comments	82
	Morphology of Hemiptera	82
	Stylet tracks	83
	Systematic distribution	85
	Heteroptera	85
	Homoptera	87
	Geographical distribution	88
	Development and cecidogenous stages	88
	Gall morphology and morphogenesis	88
	Order Heteroptera: Family Tingidae	90
	Order Homoptera	91
	Superfamily Cercopoidea	94
	Superfamily Membracoidea	94
	Superfamily Psylloidea	94
	Superfamily Aphidoidea	98
	Family Aphididae	102
	Family Thelaxidae	107
	Family Eriosomatidae	107
	Subfamily Pemphiginae	109

Subfamily Eriosomatinae	109
Subfamily Fordinae	112
Family Adelgidae (= Chermesidae)	115
General characters and life cycles	115
Cecidogenesis	120
Dehiscence of the galls	121
Family Phylloxeridae	122
Superfamily Coccoidea (coccids or scale insects)	127
General characters of cecidogenous coccids	127
Galls of scale insects	130
Galls of Diaspididae and Asterolecaniidae	130
Galls of Eriococcidae	130
Galls of Brachyscelidae	135
3.323 Cecidogenous Hymenoptera	141
General characters and classification	141
Symphyta	141
Apocrita	142
Cecidogenous Tenthredinoidea: Subfamily Nematinae	142
Literature	142
Cecidogenesis and gall morphology	144
Family Cynipidae (cynipids or gall wasps)	147
General comments	147
Taxonomic literature and classification	147
Biology of cynipids; morphogenesis and structure of their galls	155
Life cycles	155
The mode of action of cynipids and cecidogenesis of their galls	160
Amplitude of intrageneric morphological variations among cynipid galls	163
A common morphological convergence: pedunculation	166
Differentiation of emergences	167
Acorn galls and cryptocecidia	167
Structural convergence and adaptive divergence	169
Structural convergence	170
Adaptation of <i>Neuroterus</i> galls to the alternation of generations	170
Abscission phenomena	176
Organoid galls	177
Effect of inquiline and parasites on cynipid galls	177
Ecology of cynipid galls	179
Cecidogenous Chalcidoidea	179
Cecidogenous Eurytomidae and their galls	179
Agaonidae	187
3.324 Cecidogenous Coleoptera	189
General comments	189
Family Cerambycidae	190
Family Scolytidae	190
Family Buprestidae	190
Family Curculionidae	191

3.325	Cecidogenous Lepidoptera	198
	Low number of cecidogenous species in this order	198
	Biological particulars on cecidogenous Lepidoptera	200
	Morphology and anatomy of lepidopterocecidia	205
3.326	Cecidogenous Diptera	207
	Cecidogenous Cecidomyiidae (gall midges or gall gnats)	208
	Literature and classification	208
	Biological characteristics	208
	Mouth parts	208
	The sternal spatula	209
	Life cycles	209
	Cecidogenesis and differentiation of cecidomyiid galls	217
	Oviposition techniques	217
	External oviposition and nidification process of the larva	218
	Internal oviposition: intervention of a terebra	224
	Amplitude of morphological and structural variations	229
	Mechanisms of abscission and dehiscence in cecidomyiid galls	232
	Organoid galls of cecidomyiids	234
	Cecidomyiid galls with mycelial nutritive tissue	235
	Host specificity	237
	Gall polymorphism	238
	The case of <i>Dasineura urticae</i> : adaptation of cecidogenetic processes to the substrate	238
	Sexual dimorphism	244
	To summarize	244
	Cecidogenous cyclorrhaphous Diptera	244
	Classification and general characters	244
	Galls of cyclorrhaphous Diptera	245
C.	General considerations	253
1.	Distribution of galls in the world	253
2.	The gall as a host response which is beneficial to the parasite	253
3.	Conclusion	254
	References	256
	Parasite Index	274
	Host Index	280
	Glossary	284
	Author Index	287
