Preface and Introduction	IX
How to Read this Book	XII
1 General Statistics	1
1.1 Probability	1
1.1.1 Events	2
1.1.2 Definitions of Probability	5
1.1.3 Random Quantities	10
1.1.4 Moments and Cumulants	12
1.1.5 The Normal Distribution	14
*1.1.6 The Central Limit Theorem	17
1.2 Information Measures	19
1.2.1 <i>Shannon</i> Information	19
1.2.2 Information Gain	23
*1.2.3 Stochastic Matrices	25
1.3 Generalized Canonical Distributions	27
1.3.1 The Unbiased Guess	27
1.3.2 Properties of the Generalized Canonical distribution	30
1.3.3 Addition of Knowledge	33
2 Thermodynamics of Equilibria	36
2.1 Thermal States	37
2.1.1 Direction of Time	37
2.1.2 The <i>Liouville</i> Theorem	39
2.1.3 Equilibrium Distributions	41
*2.1.4 Statistical Operators in Quantum Mechanics	45
*2.1.5 The <i>Wigner</i> Function	52
2.1.6 Thermal Variables	55
2.2 Statistical Foundations of the Macroscopic Scheme	57
2.2.1 The Second Law of Thermodynamics	58
2.2.2 Work and Heat	60
2.2.3 Standard Distributions	63
2.2.4 Extensivities as Sharp Parameters	66
2.2.5 The <i>Carnot</i> Cycle	70

* By an asterisc are designated parts of more special interest. They can be skipped by the reader without lost of continuity.

2.3	The Phenomenological Framework	73
2.3.1	The Basic Laws of Thermodynamics	73
2.3.2	Definition of Absolute Temperature	78
2.3.3	Entropy in Phenomenology	79
2.3.4	Thermodynamic Potentials	83
2.3.5	Thermal and Caloric Equations of State	87
2.3.6	Availability	90
2.3.7	Equilibrium Conditions	95
2.3.8	Stability Relations	103
2.3.9	Specific Heat	106
2.4	The Low Temperature Regime	109
2.4.1	The <i>Nernst</i> Theorem	110
2.4.2	Characteristic Quantities at Zero Point	111
2.4.3	Unattainability of Absolute Zero Point	114
*2.4.4	Reactions at Low Temperature	116
3	Macroscopic Description of Special Systems	118
3.1	Gases and Solutions	118
3.1.1	Ideal Gases and Dilute Solutions	119
3.1.2	Mixtures of Ideal Gases	121
3.1.3	Ideal Mixtures	124
3.1.4	Real Gases	127
3.2	Chemical Reactions	132
3.2.1	Reaction Heat	132
3.2.2	Chemical Affinity	134
3.2.3	The Law of Mass Action	136
3.2.4	Electro-Chemical Potentials	140
3.3	The Method of Cycle Processes	142
3.3.1	An Isothermal Cycle	142
3.3.2	Vapor Pressure and Radiation Cavity	144
4	Microscopic Description of Special Systems	147
4.1	Thermal Equations of State	147
4.1.1	Ideal Gas	148
4.1.2	Grand Canonical Ensemble	151
4.1.3	Real Gases	154
*4.1.4	Cell Model of a Liquid	157
4.1.5	Perfect <i>Bose</i> and <i>Fermi</i> Gas	159
4.1.6	The Radiation Cavity	166

* By an asterisk are designated parts of more special interest. They can be skipped by the reader without loss of continuity.

4.2 Specific Heat	168
4.2.1 Specific Heat of Ideal Gases	169
4.2.2 Ortho- and Para-Hydrogen	172
4.2.3 Specific Heat of Solids	174
4.3 Magnetism	178
4.3.1 Paramagnetism	179
4.3.2 Weiss Theory of Ferromagnetism	181
*4.3.3 The <i>Ising</i> Model	184
*4.3.4 The Long Range Order	187
*4.3.5 <i>Bethe-Peierls</i> Approximation	190
5 Nonequilibria	194
5.1 Thermal Fluctuations	195
5.1.1 Fluctuations and Susceptibilities	195
5.1.2 Probability of Fluctuations	199
5.1.3 Applications of Einstein's Fluctuation Formula	202
*5.1.4 <i>Maxwell's</i> Demon	205
5.2 Nonequilibrium Dynamics	206
*5.2.1 The <i>Liouville</i> Operator	207
5.2.2 The <i>Mori</i> Distribution	212
*5.2.3 The <i>Wangsness-Bloch</i> Equation	215
*5.2.4 Thermodynamic Uncertainty Relation	217
5.3 Linear Thermodynamics	219
5.3.1 Fluxes and Forces	220
5.3.2 <i>Onsager</i> Symmetry	222
5.3.3 Entropy Production	223
5.3.4 Heat Conduction	225
5.3.5 Thermodiffusion	226
5.3.6 The <i>Einstein</i> Relation of Diffusion	228
*5.3.7 <i>Einstein's</i> Deduction of <i>Planck's</i> Radiation Formula	229
*5.4 A Model of Time Scale Separation	231
*5.4.1 Autocorrelations in the Harmonic Chain	232
*5.4.2 Causal Functions	233
*5.4.3 The Macroscopic Motion	234
Index	242

* By an asterisc are designated parts of more special interest. They can be skipped by the reader without lost of continuity.
