List of Figures	VII
List of Tables	XI
List of Symbols	XIII
List of Abbreviations	XIX
Abstract	XXIII
Kurzfassung	XXV
1 Introduction	1
2 State of the Art	7
2.1 Hydraulic Excavators	7
2.1.1 Classification of Hydraulic Excavators	7
2.1.2 Components and Terminology	10
2.1.3 Powertrain and Actuation	13
2.1.4 Performance Rating Parameters	14
2.2 Driver Assistance Systems in Excavators	19
2.2.1 Overload Protection Systems	19
2.2.2 Rated Capacity Indicator Systems	21
2.2.3 Payload Estimation	21
2.2.4 Workspace Envelope Monitoring	24
2.2.5 Digging Control Systems	24
2.2.6 Research on Tip-Over Prevention of Mobile Machinery	25
2.3 Tip-Over Stability in Robotics	27
2.3.1 Definition of Stability	27
2.3.2 Static Stability in Multi-Legged Locomotion	28

2.3.3	Stability in Biped Locomotion	30
2.3.4	Dynamic Stability Multi-Legged Locomotion	32
2.3.5	Comparative Analysis and Validation	36
2.4	System Modeling in Robotics	38
2.4.1	Vector Transformations and Mapping	39
2.4.2	Denavit-Hartenberg Notation	41
2.4.3	Rigid Body Dynamics	44
2.5	Simulation of Excavator Dynamics	49
2.6	Summary	50
3	Research Objectives	53
4	Tip-Over Prevention for Mobile Manipulators	59
4.1	Review of Existing Approaches	59
4.2	OPS Formulation	62
4.3	NDESM Formulation	64
4.4	NDESM Stability Measure Analysis	70
4.4.1	Simulation Model	71
4.4.2	Test Situations	74
4.4.3	Test Automation Framework	78
4.4.4	Evaluation Method	79
4.4.5	Simulation Results	84
4.5	Optimized NDESM	90
4.5.1	Examination of NDESM Prediction Failures	90
4.5.2	Coast-down Compensation	95
4.5.3	Compensation of Stabilizing Moments of Inertia	96
4.5.4	Verification	98
4.6	Summary of Proposed Method	101
5	Application on Hydraulic Excavators	105
5.1	Target Excavator Overview	106
5.2	Basic Application Considerations for Tip-Over Prediction	107
5.3	Kinematic Model	108
5.3.1	Lower Boom Cylinder	110
5.3.2	Upper Boom Cylinder	112
5.3.3	Arm Cylinder	113

5.3.4	Bucket Cylinder	113
5.4	Center of Gravity	116
5.5	Inertial loadings	117
5.6	Kinetic Energy	123
5.7	Support Configurations	125
5.8	Emergency Shutdown Control	128
5.9	Coast-Down Compensation	130
5.10	System Integration	134
6	Virtual Testing	137
6.1	Target Excavator Simulation Model	137
6.2	Model Parameters	140
6.3	NTOPv3 Implementation	142
6.4	NTOPv3 Verification	142
6.5	Conducted Tests	144
6.5.1	Excavator Supported on Dozer Blade and Outriggers	145
(i)	Linear Load Movement	145
(ii)	Boom Lowering with Load	148
(iii)	Upper Structure Rotation with Payload	150
6.5.2	Excavator Supported on Wheels with Locked Pivot Axle	152
(i)	Linear Load Motion	152
(ii)	Boom Lowering with Load	153
6.6	Discussion of Results	154
7	Field Tests	155
7.1	Instrumentation	156
7.2	Conducted Field Tests	158
7.2.1	Excavator Supported on Wheels with Locked Pivot Axle	159
(i)	Linear Load Transfer	159
(ii)	Upper Structure Rotation With Payload	163
7.2.2	Excavator Supported on Wheels with Unlocked Pivot Axle	166
(i)	Linear Load Transfer	166
7.2.3	Excavator Supported on Dozer Blade and Outriggers	167
7.3	Impact of Parameter Errors	169
7.4	Discussion of Results	171

8	Summary	173
9	Conclusion	175
	Bibliography	177
	Appendix	188
A	Verification of Stability Estimation Approaches	189
A.1	Simplified Model Description	189
A.2	Simpack Simulation Model	189
A.3	Trajectory Generation	192
A.4	Simulation Execution and Data Storage	194
A.5	Iteration Procedure for Effective Critical Point	196
A.6	Model Configurations	197
B	Implementation on Hydraulic Excavator	199
B.1	Cylinder Strokes to Body Angles Conversion	199
B.1.1	Boom Cylinder	199
B.1.2	Adjust Cylinder	200
B.1.3	Arm Cylinder	201
B.1.4	Bucket Cylinder	202
B.1.5	Matlab Code	203
B.1.6	Angular Speeds and Accelerations from Cylinder Strokes	205
B.2	Boom Cylinder Force to Moment Conversion	206
B.3	Discrete Noise-Rejecting Derivative	207
C	Volvo EW180B Target Excavator Parameters	211
C.1	Vertical Wheel Stiffness Measurement	211
C.2	Superstructure COG Calibration	213
C.3	Excavator Model Validation Results	214
C.4	Coast Down Evaluation- Swing Motion	218
C.5	Coast Down Evaluation- Cylinder Decelerations	220
D	Volvo EW180B Excavator Simulation Model	223
D.1	Co-Simulation Interface Input Variables	223
D.2	Co-Simulation Interface Output Variables	224

E	Matlab Code	227
E.1	Tip-Over Prediction Algorithm for Mobile Excavators	227
E.2	Strokes to Joint Angle Conversion	229
E.3	NDESM TOPv3	231
E.4	EW180B Newton Euler Dynamics	234
E.5	Functions - Parallel Axis Theorem	243
E.6	Functions - modified Denavit Hartenberg Transformation	244
