Africa's Last Romantic

THE FILMS, BOOKS AND EXPEDITIONS
OF JOHN L. BROM

OLGA BROM SPENCER
EDITED AND WITH AN INTRODUCTION
BY GLENN REYNOLDS

Introduction: Africa's Last Romantic

The Beckoning Land

The 'golden' era of European filmmaking in colonial Africa extended from about 1910 to 1960, as a result of increasing interest in the industrialized West in exotic images from distant countries. Following World War Two, Equatorial Africa in particular was a site targeted by filmmakers from all over the world to compete for something new and sensational. There was one European explorer, author and cineaste of the continent who remained fascinated by the fast-disappearing Africa of old, and who worked tirelessly to catalogue its many unique cultures undergoing rapid transition. John L. Brom, heralded for numerous treks through some of the most remote areas of the continent between 1949 and 1962, was in many ways a man born a century too late. Having read in his youth the thick tomes of earlier African exploration, he perhaps would have been more comfortable accompanying one of the many European explorers who traversed the beckoning land of Africa in the second half of the nineteenth century. Yet even in his own time, Brom emerged along with Armand Denis and Lewis Cotlow as one of the most prolific postwar chroniclers of the 'Africa of old' as the continent veered fitfully toward independence.¹ A resourceful man of remarkable wit and tenacity, Brom produced a steady stream of documentary films, books, and television specials on the unique cultural attributes of tribal Africa which were translated into numerous languages and went into wide circulation around the globe.

Brom had begun his film career under trying circumstances during the interwar period. In 1937 he purchased a struggling Czech film production company, renaming it Brom-Film, which released an impressive 10 films between 1935 and 1945. Brom's burgeoning career as producer and director, however, was soon put in jeopardy with the outbreak of war. As the conflict

1 Armand Denis spanned the World War Two era. In the 1930s, he had teamed up with his spouse Leila Roosevelt for a Central African expedition. Although they would later divorce, Denis married again in 1948, and chronicled through books and films his numerous safaris with his new wife Michaela. Armand Denis, *On Safari: The Story of a Man's Life in Search of Adventure* (New York: E.P. Dutton & Co., 1963). Lewis Cotlow searched for 'the primitive' throughout the world. For an examination of Cotlow's film *Jungle Headhunters* shot in the Amazon rainforest, see Amy Staples, "'The Last of the Great (Foot-Slogging) Explorers:' Lewis Cotlow and the Ethnographic Imaginary in Popular Travel Film." in Jeffrey Ruoff, *Virtual Voyages: Cinema and Travel* (Durham: Duke University Press, 2006, 195-216. See also Lewis Cotlow, *Zanzabuku: Dangerous Safari* (NY: Rinehart & Co., 1956).

worsened, the homefront was increasingly destabilized and Brom-Film was unable to sustain its earlier brisk production schedule. Brom, in fact, had already seen dark clouds developing in Germany, for after gaining power in 1933 Hitler had quickly established the Ministry of Public Enlightenment and Propaganda under the leadership of Propaganda Minister Joseph Goebbels. The result was a veritable breakdown of the industry, as many German filmmakers were arrested or fled the country, and international boycotts cut painfully into profit margins. Filmmakers like Brom in neighboring countries would soon suffer similar misfortunes as the Nazis expanded their sphere of influence throughout much of Europe.

During the war, Brom and other filmmakers found themselves targeted by the Nazis. Yet despite this frightening turn of events, he continued to develop and expand his ideas as a producer. Ironically, it was during this period, when most Europeans were absorbed with the ugly realities of total war that Brom's long-standing interest in the Black Continent actually blossomed into preparations for launching a film expedition to Africa. Unfortunately, the sudden nationalization of Brom-Film by the Communists after the war ended in 1945 caused yet more delays as he was forced to flee to Paris. But soon, breathing easier in newer climes and with the conflict now concluded, he reinvented himself as a 'French' film director, beginning with his postwar transition from Ladislav John Brom, to 'John L. Brom.' Between 1949 and 1962, with Paris as his primary base of operations, Brom traveled extensively throughout Africa—with a focus on equatorial regions—producing a steady stream of documentary material detailing the incredible diversity of African life.

European Expeditions to the Nile, the Niger and Beyond

From dictators to dreamers, European interest in Africa has a long and fascinating pedigree. In fact, no continent has been more defined by century upon century of European exploration and discovery, dating back well into antiquity at least to the time of Herodotus. Although scholars dispute the exact itinerary of his explorations, Herodotus, often referred to as the 'father of history' for meticulously chronicling his extended foreign adventures in his *Historia*,² certainly visited Cyrene and Egypt on the North African coast sometime around 450 BC. These journeys were followed up the next century by Alexander the Great's 'liberation' of Egypt from Persian control in 332 BC, where he was subsequently given the title 'Master of the Universe.'³

2 Herodotus, *The Histories: a new translation by Robin Waterfield* (Oxford: Oxford University Press, 2008).

3 Nicolas Grimal, *A History of Ancient Egypt* (London: Blackwell Publishing, 1992), 382.

One of the ‘great unknowns’ in African exploration, even in days of old, was the exact source of the Nile River. Although Herodotus had compiled a few theories derived from various sources, verifiable knowledge remained elusive. If Pliny the Elder is to be believed, sometime around the burning of Rome in 64 AD Emperor Nero sponsored a Nile expedition with the intent of determining its origin, although the vessels were eventually stymied by the swampy ‘Sudd’ of the White Nile when the maritime expedition reached the South Sudan.

The Middle Ages ushered in a new era of fascination with Africa. In the 14th century the myth of Prester John, a Christian many believed to reside in Africa somewhere ‘beyond the land of the Muslims,’ was fully promulgated by Sir John Mandeville who described in surprising detail the fabulous palace of this noble ruler, the jurisdictions under his control, and the material wealth of his empire.⁴ Yet Prester John always remained just out of reach, and indeed today there is no firm consensus as to whether the historical ‘Priest John,’ if there ever was one, actually resided in Ethiopia or India. In any event, on the other side of the continent by the 1420s, Prince Henry of Portugal had begun sending out exploratory expeditions along the bulge of Africa in search of the source of the precious goods traveling along ancient trans-Saharan trade routes. It took years for Henry’s dreams to bear fruit, but in the process the Portuguese availed themselves of another precious resource on Africa’s west coast—slaves—a devastating phenomenon that ushered in several hundred years of European slave trading on the continent.⁵

Interest in African exploration was stimulated yet again in the late 18th century, with the 1788 formation of the African Association (Association for Promoting the Discovery of the Interior Parts of Africa) in London. This British club set its sights on discovering the origins of West Africa’s mighty Niger River, as well as locating the fabled metropolis of Timbuktu (the ‘City of Gold’) which had received attention for centuries by Arab explorers like the Moroccan Ibn Battuta (who himself mistook the Niger River for the Nile in 1353), but which had never been visited by a European. The African Association had mixed results: while Scottish explorer Mungo Park famously laid claim in 1795 to being the first European to travel the interior of Africa as far as the Niger River and emerge alive to record his exploits,⁶ explorer Daniel Houghton was

robbed and killed in the Saharan desert in 1791, while Friedrich Hornemann, dressed as a Muslim traveling with a caravan from Cairo in 1800, simply disappeared.

Not to be outdone by the British, Napoleon Bonaparte set his sights on Egypt at the twilight of the 18th century, sending in a large French invasion force that overthrew the Mamluks at the Battle of the Pyramids in 1798.⁷ Although the invasion was a classic military operation, Napoleon pointedly included 160 scholars, savants and artists on the expedition to acquire more knowledge about the long, noble history of the Egyptians, and to lay the cultural groundwork for tying the region more closely to its French colonizers.⁸

Clearly then, by the time famed explorer Richard Burton described his explorations to a rapt audience at the Royal Geographical Society in 1859, lecturing on “The Lake Regions of Central Equatorial Africa, with Notices of the Lunar Mountains and the Sources of the White Nile,” he could boast of a long history of African exploration behind him.⁹ And yet Burton was also at the forefront of yet another wave of intense exploration that spanned the second half of the nineteenth century, culminating in the ‘Scramble for Africa’ in which European powers raced to colonize most of the large land mass to their south that straddled the equator.

Images of Africa

The early years of film production in Africa overlap in a curious way with the end of the Scramble for Africa. Ponder for a moment the two modes of representation, broadly speaking, that have served as the general fount of popular European knowledge about Africa for two hundred years—the written travel narrative and the visual text. Leading up to the Scramble for Africa, and during the Scramble itself, publishers in Europe and the United States engaged in their own literary scramble to provide for Victorian audiences the latest compelling exploits of inveterate explorers. Burton, “The Lake Regions of Central Equatorial Africa, with Notices of the Lunar Mountains and the Sources of the White Nile: Being the Results of an Expedition Undertaken under the Patronage of Her Majesty’s Government and the Royal Geographical Society of London, in the Years 1857-1859,” *Journal of the Royal Geographical Society of London* 29 (1859), 1-454.

the Interior Districts of Africa (1795) to Richard Burton's *Two Trips to Gorilla Land* (1876), and the heavily illustrated travel accounts and memoirs by the likes of David Livingstone, Henry Morton Stanley, Savorgnan da Brazza, Emil Holub, Heinrich Barth and others, the popular exploration genre thrilled readers with the daring exploits of Europeans in exotic lands south of the Sahara. But if the core of these texts was the gripping narrative of foreign lands and strange peoples, nevertheless the popular travelogue was invariably enhanced by an array of supplemental visual aids, often in the form of elaborate prints and illustrations highlighting Africa's flora and fauna as well as the most notable markers of cultural and racial difference.

The arrival of the cinema around 1895—an invention claimed almost simultaneously by both Edison in the United States and the Lumière Brothers in France—created new opportunities for capturing riveting moving images of Africa. Although some filmmakers certainly experimented with the cinema in Africa before 1909, the popular wildlife expeditions of Theodore Roosevelt and Paul J. Rainey in 1909 and 1912, respectively, jump-started the era of expeditionary filmmaking as footage of their exploits went into wide circulation.¹⁰ Soon, motion picture cameras had become ensconced as a critical component of the African explorer's necessary travel accoutrements. Indeed, *Moving Picture World*, one of the leading trade magazines of the silent film era, touted cinema as a crucial technological breakthrough capable of bringing the many worlds of the faraway and exotic into the purview of 'civilized' audiences back home:

Whenever a scientific or geographical expedition is to be undertaken we would put in a claim for the presence of the moving picture camera in the equipment... The various film manufacturing concerns are always to the fore with the moving picture camera in their enterprises. It now remains for the private individuals, the traveling photographer, explorer, geographer and the like never to undertake his journeys without a moving picture camera, as he is always sure to find a market for his pictures and interest a large section of the public.¹¹

Before the turn of the twentieth century, African expeditions generally proceeded by foot, often with large numbers of African porters in tow. By the early 20th century, with the construction of train tracks in select areas of Africa, the rail was increasingly popular for those on safari, like Roosevelt, to access the interior. After World War One, however, with the mass marketing of the

automobile, a new critical period of exploration had begun from behind the wheel for a daring few. Thus on his several African expeditions, Brom, calling his various vehicles *Tarzan* and *Flying Saucer*, was able to log in an astonishing number of miles as he worked his way deep into the interior, with cameras in tow. Unlike the railroad, the automobile allowed greater freedom to set one's own schedule, travel off the beaten track, and most importantly, travel alone if necessary.

The Pitiless Jungle

Because of Brom's significant contribution to colonial filmmaking, his films and photographs have been historically preserved at the National Cinematèque in Paris, and at the Smithsonian's Human Studies Film Archives in Suitland, Maryland. His pre-war films are preserved at the Gold Fund of National Archives in Prague, and are often screened on television. In Germany, Brom was given the title 'Explorer of the Decade' after re-enacting the famous expedition of Henry Morton Stanley who traveled extensively on the Congo River. In his lifetime he achieved global renown through his books including *The Pitiless Jungle*, *African Odyssey*, and bestseller *20,000 Miles through the African Jungle*,¹² and with films like *On the Footsteps of Stanley* and *Dr. Livingstone, I presume*, and the five-part television series *African Odyssey*.

Brom's first African expedition, organized in 1949 after securing the necessary financial backing, was also his largest. Traveling to French Cameroun with a film crew of eight, he soon determined that his desire for flexibility, along with problems locating lodging for such a large party, would require that he restrict the size of his future expeditions. The result was that while some explorer/filmmakers in Africa traveled in surprisingly large caravans—Martin and Osa Johnson, Paul Hoeffler, and Armand and Michaela Denis are three prominent examples—Brom would soon begin traveling either with a very small film crew, or even alone. This provided him the necessary intimate contact with Africans to forge long-lasting relationships, a trait which set him apart from many of his contemporaries. It also facilitated technological innovations, for Bell & Howell developed a revolutionary small, mobile motion picture camera especially for Brom to be used on his solo expeditions.

The primary goal of his first expedition was to produce footage for *The Pitiless Jungle*, a film cast in the mold of a fictionalized documentary, or 'un

12 John L. Brom (translated by Oliver Coburn), *The Pitiless Jungle* (New York: David McKay Co., 1955). John L. Brom, *African Odyssey* (New York: Living Books, Inc., 1958). *African Odyssey* was first published by Editions de la Pensée Moderne under the title *Kon-Tiki Africain*.

documentaire-romancé.' This genre, in fact, served as the basic template for advertising French colonization and 'civilizing' efforts since at least the 1928 founding of the Colonial Film Committee (Comité de Propagande Colonial par le Film). But following his return to Europe, Brom focused on publishing a book with the same title that, rather than simply retelling the film's storyline instead recounted the harrowing adventures of the film expedition itself. In his prologue to *The Pitiless Jungle*, Brom described what led him to share the details of his filmmaking exploits to the broader reading public:

When I unpacked my cases on returning to Paris, and took out all the masks, bows, panther skins, and other souvenirs of my year in Africa, I found buried beneath them many crumpled sheets of paper. These were my many notes, written during a halt, on truck seats, in some native hut, or under the shade of an age-old baobab tree. They, too, were redolent of Africa, and I could not resist the temptation of rereading them, sorting them, making a book of them. though I soon saw, alas, how impossible it was to bring everything into a single volume.¹³

Brom, of course, was speaking specifically of his book. But what was true for *The Pitiless Jungle* is even truer for any attempt to sum up the measure of a man's entire life in a single text. Nevertheless, the aim of *Africa's Last Romantic*, a remarkable memoir narrated by Olga Brom Spencer, is precisely to pull together the many threads of Brom's productive career—from his many African expeditions, to his books, films, television series—as a testament to the fascinating life of this filmmaker/explorer and as a general summation of his vision that will prove to be of interest to the African scholar and the layperson alike.

Africa's Last Romantic, however, offers the reader more than just a synopsis of Brom's numerous travels and travails in Africa. For in *The Pitiless Jungle*, Brom elected to alter the names of both people and places, and indeed, referred to himself in the third person as 'John Hogarth' throughout the book. While this allowed for "greater frankness," in Brom's words, it can be a potential source of frustration for scholars trying to glean the film crew's actual itinerary in the interior of Equatorial Africa. Fortunately, with the publication of *Africa's Last Romantic*, the royal city 'Hogarth' refers to apocryphally as 'Kilembou' can now be positively identified as Foumban, the seat of the Bamoun (Bamum) people in western Cameroon. Similarly, the royal figure he refers to only as 'the Sultan,' we now know to be Seidou Njimoluh Njoya (Olga Brom Spencer refers to him as 'Sultan Seydou' in this memoir). Njimoluh was the son of the remarkable king Ibrahim Njoya, who ruled Bamoun from approximately 1886 to his expulsion by French colonial authorities in 1931, and was responsible for

13 John L. Brom, *The Pitiless Jungle*, 3.

developing the Bamoun Script, a syllabic system for recording the native language. The young, cosmopolitan Njimoluh, chosen by a host of Bamoun nobles to succeed his father in 1932, spoke both French and English, and was an important patron of the arts who worked to preserve the cultural heritage of his people for six decades until his death at age 90 in 1992.¹⁴

“Jambo”

From the west coast to the east coast, Brom had a strange knack for securing an audience with African royalty. Whether meeting with King Lukenga of the Kuba, the Sultan of Bamoun, or the chief of the Matoka, Brom consistently displayed an aptitude for building a positive *rapport* with African leaders, a character trait that was instrumental in securing his right to film in several kingdoms throughout the continent.

Even more importantly, Brom had a unique ability to relate to the common villager everywhere he traveled. One of the strengths of *Africa's Last Romantic* is the sympathetic portrait it provides of the numerous peoples Brom met in his years in the interior. Highlighted, among many others, are the Mangbetu in Central Africa, inhabiting the Orientale Province in what is now the Democratic Republic of the Congo. Long practicing the tradition of Lipombo (skull elongation achieved through wrapping the skull tightly with fabric), the Mangbetu only came to the attention of Europeans with the 1870 explorations of German botanist Georg Schweinfurth. By the late nineteenth century, the Mangbetu were generally depicted as a cannibalistic people who nevertheless had developed a sophisticated court culture, and were supposedly a mixture of the ‘Semitic’ and ‘Bantu’ races.

Brom also spent time in the deep recesses of the tropical Ituri Rainforest in the northeastern regions of Belgian Congo. Here resided the famous but elusive Pygmies. The Pygmies, or Bambuti (Mbuti), rumored by chroniclers as early as Homer to be a diminutive people inhabiting India or perhaps the lands south of Ethiopia, constitute one of the most ancient populations in this region of Central Africa. Brom, when he first entered the region, used an ingenious method to convince these forest dwellers that the strange white man meant no harm—he traded three packs of cigarettes for a serving of elephant meat:

How was I to make them understand that I had no evil intentions and had no wish to disturb the peace of their little village? I put three packs of cigarettes down on a stone and went back towards the road...I was justified in the event. Hardly had I

14 For more on the dynasty ruling the Bamoun, and its relationship to the German colonial regime, see David McBride, *Crosscurrents: African Americans, Africa and Germany in the Modern World* (New York: Camden House, 1998), 157.

been roused [the next morning] by singing of the birds when I thought I could smell fresh meat, none too fresh. I opened the tent flap and saw, on the grass, a parcel made of banana leaf. Surprised, I unwrapped the leaf: it contained a lump of elephant meat covered with black flies.¹⁵

Readers of *Africa's Last Romantic* will also encounter unique and enterprising individuals in the heart of Africa like the Wagenia fishermen, who inhabit a region near Stanley Falls not far from the city of Kisangani. For generations, these enterprising fishermen have made use of a clever labor-saving method of fishing involving nets draped over bamboo scaffolding anchored into the rapids of the Congo River. Brom interviewed and filmed Wagenia villagers, and discovered how the original scaffolding was put in place decades before. Today, the Wagenia have become something of a cultural icon in the region, and visitors and tourists are now required to pay a fee for the right to photograph either the fishermen or the nets. In part, this reflects the institutionalization of the tourist ethos in Africa, but it also reflects the fact that the Congo River has been dangerously overfished, and the declining yields in the Wagenia nets have resulted in villagers turning toward the tourist economy to subsidize their 'traditional' lifestyle.

Dr. Livingstone, I Presume?

If John Brom was captivated by the broad panorama of African life, he was equally fascinated with the long history of European exploration described above. In particular, the famous tale of journalist Henry Morton Stanley locating, at long last, the missing Scottish missionary deep in the African interior in 1871 was one that never ceased to fascinate him. Just as this most unlikely meeting, which began with Stanley's well-known phrase, "Dr. Livingstone, I presume," continued to reverberate through the annals of nineteenth century journalism and through popular culture more generally (Stanley's gripping account of locating Livingstone was one of the most famous 'scoops' of the century, just as his editor at the *New York Herald*, James Gordon Bennett, intended it), so did it resonate with Brom throughout his life and provide inspiration for his most successful film, *On the Footsteps of Stanley*, as well as the first of his *African Odyssey* television specials, *Dr. Livingstone, I Presume*.

Indeed, Brom's interest in both Stanley and Livingstone led him to attempt not only to trace the footsteps of these famous explorers, but in some instances to travel, with camera in hand, under the same primitive conditions forged by these explorers a century before. Thus, Brom found himself in 1952 aboard a

15 John L. Brom, *African Odyssey* (New York: Living Books, 1966), 183.

traditional African log canoe, guided by Matoka oarsmen, violently rushing towards one of the most stunning sights in the world: Victoria Falls. It required a steady hand on the part of Brom to keep the camera rolling as the craft hurtled dangerously toward the white spray of the abyss. At the last moment, just before the powerful stream sucked Brom and crew over the edge, the oarsmen deftly guided the boat to safety. Perhaps no man had come so close to death just to duplicate the thrill of David Livingstone a century before when he became the first European to behold the largest ‘single sheet of water’ in the world in 1855. “No one,” gushed Livingstone, “can imagine the beauty of the view from anything witnessed in England. It had never been seen before by European eyes; but scenes so lovely must have been gazed upon by angels in their flight.”¹⁶

The Measure of a Man

Was Brom a romantic? At first glance, looking at his portraits in Africa, there is little to suggest in his robust posture and penetrating eyes that this man who traveled 40,000 miles through sub-Saharan Africa under the most difficult conditions was a romantic hero. Yet this narration by Olga Brom Spencer reveals, step by step, how life’s circumstances transformed a charismatic European filmmaker into a passionate witness documenting traditional cultures in Africa that were disappearing so quickly and turbulently under the impact of progress and global change.

Brom’s creative freedom had been taken away from him in Europe, but he found it in Africa. Like many others, he had been a victim of two terrible wars and dramatic socio-economic changes in Europe, including the nationalization of property in parts of the continent that changed the destinies of millions. The stresses that forced him to move to Western Europe led to his transformation into a truly international figure who related to people on a level beyond the petty transactions and ‘tribal interests’ that had been responsible for pulling the world into two global conflagrations.

Traveling to Africa with its heavily-textured veneer of cultural and racial differences, he managed to capture with his camera people who in fact shared many of the same struggles, hopes and dreams as everyone else in the world. Moreover, he was surprised to find a universal sense of the divine, despite the differences in how this belief was expressed from region to region. Ultimately, his connection to the African people was due to his ability to relate to this primordial consciousness found within all human beings.

16 *Spectrum Guide to Zambia* (Nairobi: Camerapix, 1996).

John Brom was a man with tremendous drive and focus. And because of circumstances, he was also a study in contrasts. Born a white man, he developed a close affinity for the Black Continent; a product of Europe, he left for Africa to rebuild his existence after Brom-film was nationalized; working to capture the ‘vanishing primitive,’ he was instrumental in bringing to the outside world the first generation of modern African oil painters by organizing international art exhibitions on their behalf; determined to avoid politics in post-colonial Africa, he paid back those who helped him rebuild his life in Africa by volunteering as a consultant in the early Joseph Kasavubu administration in the Democratic Republic of the Congo. And finally, though critical of the overblown commercialization of a fictional Africa promoted by some Hollywood projects, he nevertheless identified with famous director John Huston whom he befriended in Paris.

With small camera in tow, Brom scoured the continent to catalogue for posterity the wild game, the small villages, and the vibrant cultures of a continent undergoing such tremendous changes in the early years of independence. As his acquaintance Ernest Hemingway once declared, “John L. Brom is one of the most eminent experts on Africa. From every journey to the Black Continent he brings back something new and unknown.”¹⁷

What is the measure of John Brom’s work? Clearly, his Africa of the 1950s had drastically changed: the last vestiges of the Mbuti were being assimilated with surrounding peoples, and their Ituri Forest was fast disappearing. Nomadic Maasai warriors were losing their traditional territories to governmental agricultural projects, while the proud Wagenia fishermen were quickly becoming a tourist attraction posing for cash. Massacres and later a virtual genocide would increasingly frame the relationship between the Hutu and Tutsi. The great Serengeti plains, once teeming with wild game, now lay virtually empty due to over-hunting and rapid development. Elephants and gorillas were now bounded by restricted areas to protect them from poachers.

What is the measure of a man? To do something of value and thus to make one’s mark on the world. Africa had changed but the old Africa was brought to life in John Brom’s films, and indeed his spirit is still living in his many books. *Non omnis moriar.*

17 Hemingway was one of several reviewers cited in the hand-bound volume advertising the release of Brom’s television series on Africa by North Star Productions. See *African Odyssey – Created by John L. Brom* (no publisher, no date), editor’s possession, p. 11.
