

C O N T E N T S

Prelude:

Why and to what end mathematical models in radiation biology

J. Kiefer 1

Models of cellular radiation action - an overview

K.J.Weber 3

Finestructures of energy deposition - introductory remarks

J.Kiefer, M.Kost 29

Analytics required by the multiple nature of radiation effects
in cells

E.L.Powers 41

Problems in theoretical track structure research for heavy
charged particles

H.G.Paretzke 49

Radiobiological modeling based on track structure

R.Katz 57

The role of energy distributions of charged particles in the
mutagenic radiation action

S.Kozubek, E.A.Krasavin, K.G.Amirtayev, B.Tokarova,
L.P.Chernenko, M.Bonev 85

Relative biological effectiveness: review of a model

K.Günther, W.Schulz 97

Saturation in dual radiation action

H.H.Rossi, M.Zaider 111

Hit-size effectiveness approach in biophysical modeling M.N.Varma, V.P.Bond	119
Interpreting survival observations using phenomenological models J.M.Nelson, L.A.Braby, N.F.Metting, W.C.Roesch	125
Cluster theory of the effects of ionizing radiations C.A.Tobias, E.Goodwin, E.A.Blakely	135
The LETHAL AND POTENTIALLY LETHAL model - a review and recent development S.B.Curtis	137
DNA double-strand breaks and their relation to cytotoxicity K.H.Chadwick, H.P.Leenhouts, E.Wijngaard, M.J.Sijmsma	147
The pairwise lesion interaction model D.Harder	159
A repair fixation model based on classical enzyme kinetics J.Kiefer	171
Formal, empirical and mechanistic equations in cellular radiation biology R.H.Haynes	181
