

Contents

1. Introduction	1
2. Theory	3
2.1. High Temperature Corrosion	3
2.1.1. Oxidation of Metals	3
2.1.2. Metals under Oxidizing Conditions Containing SO ₂ /SO ₃	7
2.1.3. Hot Corrosion of Metals	9
2.2. Basics of Segregation	14
2.2.1. Theory of Segregation	14
2.2.2. Sulfur Segregation	16
2.2.3. Boron Segregation	17
2.3. Nickel-Based Alloys in High Temperature Application	18
2.3.1. Long Term Application at High Temperature	19
2.3.2. Application under Corrosive Atmosphere	21
3. Experimental	25
3.1. Ni-Based Material from High Temperature Application	25
3.1.1. Composition and Heat-Treatment of Ni-Based Alloy DMV 617 mod	25
3.1.2. High Temperature Application Conditions	26
3.1.3. Cross Section Preparation for Analysis	26
3.2. Measurement Techniques	27
3.2.1. Scanning Electron Microscopy	27
3.2.2. Auger Electron Spectroscopy	30
3.2.3. Atom Probe Tomography	37
3.2.4. X-ray Photoelectron Spectroscopy	39
3.2.5. Transmission Electron Microscopy	39
4. Results and Discussion	41
4.1. Microstructure of DMV 617 mod	41
4.1.1. Microstructure of DMV 617 mod before exposure	42
4.1.2. Microstructure of DMV 617 mod after exposure for 20000 h	43
4.1.3. Discussion of Microstructure after different Aging Temperatures	50
4.2. Fireside Corrosion of DMV 617 mod after Exposure for 20000 h	51
4.2.1. Results after Exposure at 704 °C	52

- 4.2.2. Results after Exposure at 664 ° C 67
 - 4.2.3. Discussion of exposed DMV 617 mod at 704 °C and at 664 °C 77
 - 4.3. Ni-Cr Model Alloys 88
 - 4.3.1. Results of Model Alloy Ni-Cr-B 89
 - 4.3.2. Results of Model Alloy Ni-Cr-C 89
 - 4.3.3. Results of Model Alloy Ni-Cr-C-B 91
 - 4.3.4. Discussion of Model Alloys 92
 - 4.4. Sulfur Distribution in DMV 617 mod after Exposure for 20000 h 93
 - 4.4.1. Fracture Samples from Grain Boundaries in the Bulk 94
 - 4.4.2. Fracture Samples from Grain Boundaries at the Fireside 95
 - 4.4.3. Discussion of Fracture Samples 97
- 5. Conclusions and Outlook 99**
- A. Appendix 101**
 - A.1. Oxidation Side of DMV 617 mod before exposure 101
