

Table of Contents

Preface	1
Introduction	6
1. Overview	11
1.1. Variables, values, assignments	11
1.2. The basic operations	15
1.3. Giving commands, getting answers	18
1.4. A first look at CLEAR	21
1.5. WS, SAVEAS, INPUT n	21
1.6. Some built-in functions	22
1.7. NUM and DEN	24
1.8. Differentiation	26
1.8.1. Partial derivatives	29
1.9. Integration	29
1.10. FOR ... DO	32
1.11. FOR ... SUM	34
1.12. FOR ... PRODUCT	36
1.13. WHILE ... DO	36
1.14. Boolean expressions	37
1.15. REPEAT ... UNTIL	40
2. A Harder Look	42
2.1. The SUBSTITUTION function	42
2.2. ARRAY and OPERATOR	45
2.2.1. Arrays	45
2.2.2. Operators	50
2.3. Matrices	54
2.3.1. MAT	58
2.3.2. Printing matrices	59
2.3.3. Matrix expressions	60
2.3.4. Other matrix operations	62
2.3.5. A matrix example	63
2.4. The COEFF function	65
2.4.1. Multi-dimensional arrays	67
2.4.2. Simple variable destinations	67

2.5. FACTORIZE	68
2.5.1. Simple variable destinations	70
2.6. The SOLVE function	71
2.7. LET and CLEAR	77
2.7.1. A first look at LET	77
2.7.2. LET power = ...	79
2.7.3. MATCH power = ...	82
2.7.4. LET product = ...	82
2.7.5. LET sum = ...	83
2.7.6. LET operator = ...	85
2.7.7. CLEAR	87
2.7.8. FOR ALL X LET ... = ...	88
2.7.9. FOR ALL ... SUCH THAT ... LET ... = ...	94
2.7.10. LET DF(...) =	97
2.7.11. Overlapping rules	98
2.7.12. WEIGHT	101
2.7.13. Complex assignments	104
2.8. WRITE	104
2.9. Grouping	107
2.9.1. Grouped statements	108
2.9.2. Groups as expressions	109
2.10. IF ... THEN	113
2.10.1. IF ... THEN statements	113
2.10.2. IF ... THEN expressions	114
2.11. PART and setting a PART	117
2.11.1. PART	117
2.11.2. Setting a PART	120
3. Setting Modes and Options	123
3.1. EXP	123
3.2. GCD	126
3.3. LCM	130
3.4. MCD	131
3.5. RESUBS	133
3.6. ORDER	134
3.7. FACTOR command	136
3.8. FACTOR switch	138

3.9. DIV	141
3.10. RAT	143
3.11. ALLFAC	143
3.12. LIST	145
3.13. NERO	147
3.14. NAT, FORT	148
3.15. PRI	149
3.16. KORDER	149
3.17. Domain modes	153
3.17.1. FLOAT	154
3.17.2. BIGFLOAT and NUMVAL	159
3.17.3. RATIONAL	163
3.17.4. MODULAR	165
4. Procedures	169
4.1. Procedures without parameters or RETURN	170
4.2. Procedures with RETURN	174
4.3. Returning multiple values	178
4.4. Procedures with one parameter	182
4.5. Procedures with more than one parameter	185
4.6. Procedures with local variables	189
4.7. Interaction of procedures	192
4.8. Linkage questions	194
4.8.1. Formal parameters	194
4.8.1.1. The copy variable	194
4.8.1.2. The LET exception	196
4.8.1.3. CLEAR	198
4.8.1.4. The SUB exception	199
4.8.1.5. Arrays and the like	200
4.8.1.6. Advice	201
4.8.2. Local variables	202
4.8.3. The scopes of variables	202
4.8.4. Exit on error	203
4.9. Procedures with GO TO	205
4.10. LET rules as procedures	206

5. Case Studies	210
5.1. Find the variables	210
5.1.1. Find a given variable	210
5.1.2. Finding all variables	215
5.2. Dividing polynomials	220
5.2.1. Exact division	220
5.2.2. Divisions with remainder	221
5.2.2.1. The linear denominator case	224
5.2.3. A polynomial division procedure	224
5.2.4. The REMAINDER function	232
5.3. LCM, GCD, and the Euclidean Algorithm	236
5.3.1. Least common multiple	236
5.3.2. Greatest common divisor	238
5.3.3. The Euclidean Algorithm	239
5.4. Systems of linear equations	241
5.4.1. A procedure	244
5.5. Series approximations to quotients	248
5.5.1. Maclaurin expansion	251
5.6. Families of polynomials	252
5.6.1. The Tschebycheff polynomials	252
5.6.2. The Newton polynomials	260
5.6.3. Orthogonal polynomials	265
5.7. Rationalizing denominators	268
5.7.1. Automating the process	270
5.7.2. Algebraic numbers as denominators	275
5.8. A bug involving surds	278
5.9. Noncommuting symbols	282
5.9.1. Quaternions	283
5.9.2. Steenrod Squares	286
6. Running REDUCE	289
6.1. The basics	289
6.2. IN from files	292
6.2.1. REDUCE.INI	295
6.2.2. PAUSE, CONT, and DEMO	296
6.3. Making corrections	297
6.3.1. Correcting as you type	297

6.3.2. Correcting the previous statement	297
6.3.3. Editing earlier statements	301
6.3.4. Correcting syntax errors in files	302
6.3.5. Correcting files	303
6.3.6. Correcting procedures	304
6.4. INPUT, RETRY, CMD	305
6.5. OUT, FORT, LINELENGTH	306
6.5.1. OUT to files	306
6.5.2. FORT	308
6.5.3. LINELENGTH and FORTWIDTH!*	310
6.6. COMPILE, FASLOUT, LOAD	311
6.6.1. Fast-loading files/fast-running procedures	311
6.7. TIME, SHOWTIME	313
6.8. DEFINE	314
6.9. Tracing	317
6.10. Expression input	318
6.11. Lost in LISP?	323
Index	325
