

Table of Contents

Chapter One--Surfactant Science and Technology An Overview

Introduction	1
A Brief History of Surfactant Science and Technology	3
Surfaces, Interfaces, and Surfactant Structures	6
The Nature of Interfaces	7
Molecules at Interfaces	10
The Surfactant "Personality"	12
Surfactant Building Blocks	13
The Economic Role of Surfactants	15
Modern Surfactant Consumption	17
Surfactants in the Environment	19
A Surfactant Glossary	22
The Shape of Things to Come	26

Chapter Two - The Organic Chemistry of Surfactants

Introduction	27
The Many Faces of Dodecane	28
The Classification of Surfactants	31
Surfactant Solubilizing Groups	32
Common Surfactant Hydrophobic Groups	34
Fatty Acids	34
Paraffins	36
Olefins	36
Alkylbenzenes	37
Alcohols	38
Alkylphenols	39
Polyoxypropylenes	39
Fluorocarbons	40
Silicone Surfactants	41
Anionic Surfactants	42
Sulfate Esters	44
Fatty Alcohol Sulfates	45
Sulfated Fatty Acid Condensation Products	46
Sulfated Ethers	47
Sulfated Fats and Oils	48
Sulfonic Acid Salts	49
Aliphatic Sulfonates	49
Alkylarylsulfonates	51
α -Sulfocarboxylic Acids and Their Derivatives	53
Miscellaneous Sulfo Ester and Amide Surfactants	55

Alkyl Glyceryl Ether Sulfonates	58
Carboxylate Soaps and Detergents	59
Ligninsulfonates	60
Phosphoric Acid Esters and Related Surfactants	61
Cationic Surfactants	62
Textiles and Cleaning Application	65
Antibacterial Applications	65
Corrosion Protection	66
Ore Flotation	66
Asphalt Emulsions	67
Miscellaneous Applications	67
Nonionic Surfactants	67
Polyoxyethylene-Based Surfactants	68
Derivatives of Polyglycerols and Other Polyols	69
Block Copolymer Nonionic Surfactants	71
Miscellaneous Nonionic Surfactants	73
Amphoteric Surfactants	74
Imidazoline Derivatives	75
Surface Active Betaines and Sulfobetaines	77
Phosphatides and Related Amphoteric Surfactants	78

Chapter Three - Surfactants in Solution: Micellization and Related Association Phenomena

Introduction	81
Surfactant Solubility and the Krafft Temperature	82
The Phase Spectrum of Surfactants in Solution	84
The History of the Micellar Theory	90
Manifestations of Micelle Formation	91
Thermodynamics of Dilute Surfactant Solutions	95
Classical Theories of Micelle Formation	96
Molecular Geometry and Micelle Formation	101
Experimental Observations of Micellar Systems	104
Micellar Aggregation Numbers	104
The Critical Micelle Concentration	106
The Hydrophobic Group	107
The Hydrophilic Group	118
Counterion Effects on Micellization	121
The Effect of Additives on the Micellization Process	121
Electrolyte Effects on Micelle Formation	122
The Effect of pH	124
The Effects of Added Organic Materials	126
The Effect of Temperature on Micellization	128
Micelle Formation in Mixed Surfactant Systems	129
Micelle Formation in Nonaqueous Media	132
Vesicles and Lipid Membranes	135
The Micelle and Beyond	136

Vesicles	138
Polymerized Vesicles and Lipid Bilayers	141
Polymer/Surfactant Interactions	142
Nonionic Polymers	145
Ionic Proteins and Proteins	147
 Chapter Four - Solubilization, Microemulsions, and Micellar Catalysis	
Introduction	153
Solubilization in Surfactant Micelles	154
The Locus of Solubilization in Micelles	156
Surfactant Structure and the Solubilization Process	158
Solubilization and the Nature of the Additive	162
The Effect of Temperature on Solubilization Phenomena	165
The Effects of Nonelectrolyte Cosolutes	167
The Effects of Added Electrolyte	169
Miscellaneous Factors Affecting Solubilization	170
Polymers, Surfactants, and Solubilization	170
Microemulsions	172
Surfactants, Cosurfactants, and Microemulsion Formation	177
Micellar Catalysis	179
Micellar Catalysis in Aqueous Solvent	179
Micellar Catalysis in Nonaqueous Solvents	181
 Chapter Five - Surface Activity and the Liquid/Vapor Interface	
Introduction	183
Interfaces and the Adsorption Phenomenon	183
A Thermodynamic Picture of Adsorption	185
The Effect of Surface Curvature	190
The Surface Tension of Solutions	191
Surfactants and the Reduction of Surface Tension	193
Efficiency, Effectiveness, and Surfactant Structure	195
 Chapter Six - Emulsions	
Introduction	209
The Liquid/Liquid Interface	210
General Considerations of Emulsion Stability	212
The Lifetimes of Typical Emulsions	215
Theories of Emulsion Stability	217
Emulsion Type and the Nature of the Surfactant	220
Surface Activity and Emulsion Stability	222
Some Mechanisms of Emulsion Stabilization	223
Mixed Surfactant Systems and Interfacial Complexes	228
Liquid Crystals and Emulsion Stability	230

Surfactant Structure and Emulsion Performance	234
The Hydrophile-Lipophile Balance (HLB)	235
The Effects of Additives on HLB	241
Phase Inversion Temperature (PIT)	242
Application of HLB and PIT in Emulsion Formulation	243
Multiple Emulsions	245
Nomenclature for Multiple Emulsions	246
Preparation and Stability of Multiple Emulsions	247
Primary Emulsion Breakdown	249
The Surfactants and Phase Components	250

Chapter Seven - Foams

Introduction	255
The Physical Basis for Foam Formation	256
The Physical Role of the Surfactant in Foams	260
Foam Formation and Surfactant Structure	263
Liquid Crystals and Foam Stability	266
The Effects of Additives on Surfactant Foaming Properties	267
Foam Inhibition	268
Chemical Structures of Antifoaming Agents	270
A Summary of the Foaming and Antifoaming Activity of Additives	271

Chapter Eight - Surfactants at the Solid/Liquid Interface

Introduction	273
The Nature of Solid Surfaces	274
Liquid versus Solid Surfaces	278
Adsorption at the Solid/Liquid Interface	279
Adsorption Isotherms	280
Mechanisms of Surfactant Adsorption	282
The Electrical Double Layer	286
The Mechanics of Surfactant Adsorption	289
Adsorption and the Nature of the Adsorbent Surface	290
Nonpolar, Hydrophobic Surfaces	291
Polar, Uncharged Surfaces	292
Surfaces Having Discrete Electrical Charges	292
Surfactant Structure and Adsorption from Solution	295
Surfaces Possessing Strong Charge Sites	296
Adsorption by Uncharged, Polar Surfaces	300
Surfactants at Nonpolar, Hydrophobic Surfaces	300
The Effect of Surfactant Adsorption on the Character of the Solid surface	301
Wetting and Related Phenomena	303
Surfactant Manipulation of the Wetting Process	307
Some Practical Aspects of Wetting Control by Surfactants	311

Detergency and Soil Removal	311
The Cleaning Process	311
Soil Types	312
Solid Soil Removal	314
Liquid Soil Removal	315
Redeposition	316
Correlations of Surfactant Structure and Detergency	317
Nonaqueous Cleaning Solutions	320
Enhanced Oil Recovery	321
Suspensions of Solids in Liquids	324
A Final Comment	325
Bibliography	327
References	331
Index	345
